During the period of 49 years covered by the statement, great changes have occurred in the character of the leading imports, due to developments both in the industrial organization of the country and the goods consumed by the people. Thus in 1890, many present-day leading imports, such as crude petroleum, automobiles and parts, artificial silk, electrical apparatus, and aluminium, were either non-existent or formed very insignificant items of trade. Imports of farm implements in 1890 were valued at only \$161,000 but, due to the tremendous agricultural expansion in Canada since that time, as well as to increasing mechanization of agricultural operations, imports of farm implements have grown to a large item in spite of the wide development of their manufacture within the country. On the other hand, a number of the leading imports of 1890, such as woollen goods and raw wool, sugar and products, silk goods, tea, grain products, and meats, have become relatively much less important as imports. Then again, there were certain leading imports in 1890, such as coal, rolling-mill products, machinery, and fruits, that still remain among the chief items of imports owing to the absence of coal and high-grade iron ore deposits in the central portion of Canada, where population and industry are chiefly concentrated, and to the demand for fruits that cannot be grown in Canada. Owing to the industrial development of Canada since the beginning of the century, many of the leading imports are now raw materials required by Canadian industries. The quantities of a number of these raw materials imported in each year since 1911 are shown in Table 9, p. 533.

Among the factors affecting short-term fluctuations of imports, as distinct from the long-term trends outlined above, probably the greatest is the so-called business cycle. In periods of prosperous industrial and commercial activity, when exports move freely to world markets at remunerative prices, the national income is on a correspondingly high level and the demand for imported goods in great variety expands accordingly. Especially typical of prosperity periods are large expenditures on capital improvements and upon luxuries, while in years of depression expenditures under these two categories are eliminated or very seriously curtailed. It is,

therefore, an indication of returning prosperity in Canada to find imports of machinery, rolling-mill products, electrical apparatus, farm implements, automobiles, unmanufactured wood, etc., recovering something of the relative importance among imports that they held for a few years up to 1930.

**Canada's Principal Exports.**—In the interpretation of the figures of the commodities exported, as shown in Statement XIII, the same qualifications should apply regarding price changes and business fluctuations as cited above in the case of imports. Furthermore, factors influencing world trade, as outlined for recent years in Subsection 1, pp. 501-508, have an important bearing upon trends in Canadian exports. Since agricultural products are still an important element in Canadian exports, variations in crop conditions here and in other parts of the world cause important fluctuations in the year-to-year volume and value of exports. Among special circumstances affecting Canadian exports in the fiscal year 1939, may be mentioned lower prices for wheat, further industrial recovery in the United States and other countries, and a steady demand for metals, due partly to armament programs.

Over the period of 49 years covered by the statement, the changes in Canada's exports have been very great, both in volume and in the relative importance of commodities. The great agricultural expansion of the Canadian West had scarcely begun in 1890. The leading exports then were sawmill and timber products, cheese, fish, cattle, barley, coal, and furs—indicating the large dependence of Canadian production at that time upon the eastern forests, mixed-farming areas, and fisheries. The five leading exports in 1939 were very unimportant in 1890. The year 1910 is the earliest year in which wheat appears as the leading export in the statement, although this first occurred in 1906. The rise of the great pulp and paper industry to a leading position has been still more recent, as have industries connected with the production of non-ferrous metals, automobiles, and rubber tires. On the other hand, exports of the products of mixed-farming operations, such as cattle, hides, cheese, and butter, while showing wide fluctuations, have not expanded proportionately, and in some cases were very little or no greater in 1939 than in 1890.

Much of the new agricultural area developed since 1890 has been better adapted to grain growing than to mixed-farming operations, so that, owing to the growth of population, the products of the older mixed-farming districts are consumed to a larger extent within the country. The rapid progress during the past two decades of the mining and metallurgical industries producing non-ferrous metals in Canada is illustrated in this statement by the increased importance since 1910 of exports of non-monetary gold, copper, nickel, silver, zinc, lead, aluminium, and platinum. The part played by these industries in supporting Canada's export trade has increased since 1930 with the curtailment of world trade in agricultural products. Indeed, in 1939, these great mining and metallurgical industries provided exports slightly greater than those of either the agricultural or forest resources of Canada. The direct effect of Canada's resources of water power may be traced in the statement, not only in the growth of exports of pulp and paper and of electric energy, but also in that of non-ferrous metals, artificial abrasives, and certain chemicals such as fertilizers, sodium compounds, and acids, in all of which economic production is due largely to cheap hydro-electric power.

The wide variety of exports illustrates the extent to which the Canadian economy has been broadened and strengthened since the beginning of the century. While exports are still derived chiefly from the natural resources, the products are now exported in more finished manufactured forms, and in greater variety. The increased production of minerals and the wider range of forest products have made Canadian exports more readily adaptable to changing conditions throughout the world. Furthermore, fully manufactured commodities such as automobiles, whisky, rubber goods, farm and other machinery, electrical apparatus, etc., now form important items of the list. The self-sufficiency programs with regard to food supplies of nations with dense industrial populations have had a serious effect on Canadian agriculture, but the situation for the Canadian economy at large would have been infinitely worse, had it not been for the broadened production indicated above.

XIII.—CANADA'S LEADING DOMESTIC EXPORTS, FISCAL YEARS 1890, 1900, 1910, 1920, 1930, AND 1939.

NOTE.—Commodities arranged in order of importance, 1939.

## Subsection 8.—Proportions of Trade in Raw and Manufactured Products.

The stage attained in the industrial development of a country is indicated by the character of the goods it imports and exports. This is discussed as extensively as space permits in the preceding subsection. Statement XIV shows how Canada's imports and exports, analysed into the three categories of raw materials, partly

manufactured goods, and fully or chiefly manufactured goods, are divided between the continents and leading countries of the world. In trade with industrialized continents, such as Europe and Asia, Canada's imports are largely manufactured goods and her exports mainly raw materials or partly manufactured goods, while in trade with South America, Oceania, Africa, and North America (if the United States be excluded) the situation is the reverse. See also Table 15 of this chapter which shows the external trade classified by main groups according to origin and degree of manufacture.

XIV.—CANADA'S IMPORTS AND EXPORTS, BY CONTINENTS AND LEADING COUNTRIES, ACCORDING TO DEGREE OF MANUFACTURE, FISCAL YEAR 1939.

<sup>1</sup> No record of imports and exports of coin and bullion for 1919.

**4.—Duties Collected on Exports, 1868-92, and on Imports for Home Consumption, 1868-1939, with Percentages of Expense of Collection to Gross Customs Revenue Collected, Fiscal Years 1868-1939.**

NOTE.—The figures in this table are the gross figures of duties collected; the net national revenue from customs taxation, because of the drawbacks paid is considerably smaller. For net customs revenue, see statistics of revenue from customs duties in the historical revenue table in Chapter XXI on Public Finance.

Year.	Duties Collected on Exports.	Duties Collected on Imports.	Percentage of Expense of Collection to Gross Customs Revenue.	Year.	Duties Collected on Exports.	Duties Collected on Imports.	Percentage of Expense of Collection to Gross Customs Revenue.

## 13.—Principal Imports into Canada for Consumption from United

No.	Item.	United Kingdom.			
		1936.	1937.	1938.	1939.
<b>VII. Non-Metallic Minerals—concluded.</b>					
Glass—					
1	Carboys, bottles, jars, etc..... \$	52,570	52,241	68,066	57,144
2	Common window glass.....sq. ft.	9,591,316	12,304,701	10,700,500	14,370,210
3	Plate glass.....sq. ft.	330,884	430,754	368,319	443,797
		700,683	1,780,233	1,347,056	962,673
		256,391	571,252	473,130	369,485
4	Tableware of glass..... \$	68,362	96,509	103,944	85,186
	Totals, Glass <sup>1</sup> ..... \$	925,033	1,429,446	1,391,229	1,384,171
5	Graphite and its products..... \$	52,552	51,629	75,433	52,053
Petroleum and Asphalt—					
6	Asphalt..... \$	54	1	148	185
7	Crude petroleum.....gal.	19,833	5,398	32,475	2,540
		3,168	928	6,067	471
8	Fuel oil for ships.....gal.	Nil	Nil	Nil	Nil
		—	—	—	—
9	Gasoline.....gal.	450	6,802	6,682	Nil
		180	653	661	—
10	Kerosene, refined.....gal.	4,640	Nil	5,485	Nil
		887	—	921	—
11	Lubricating oils.....gal.	94,520	91,142	110,512	81,265
		34,674	31,135	39,923	28,851
	Totals, Petroleum and Asphalt <sup>1</sup> ..... \$	55,761	63,974	101,018	57,236
12	Diamond dust or bort..... \$	122,176	74,922	52,814	17,513
13	Sand, silica.....cwt.	Nil	3,900	2,345	983
		—	737	403	303
14	Carbons, electric..... \$	726	1,114	1,582	737
15	Diamonds, unset..... \$	103,261	96,582	180,270	87,376
16	Salt.....cwt.	574,482	683,686	651,989	509,735
		168,530	205,469	192,506	171,687
17	Sulphur.....cwt.	1,337	45,324	630	1,241
		2,571	37,116	1,372	2,019
	Totals, Non-Metallic Minerals <sup>1</sup> ..... \$	12,932,009	13,102,638	13,092,732 <sup>2</sup>	12,910,420
<b>VIII. Chemicals and Allied Products.</b>					
18	Acids..... \$	448,848	550,949	668,958	567,274
19	Cellulose products (totals)..... \$	137,749	132,882	83,189	111,393
Drugs and Medicines—					
20	Medicinal preparations..... \$	584,963	539,082	598,204	559,974
21	Preparations for spraying..... \$	86,171	104,562	116,924 <sup>2</sup>	193,546
	Totals, Drugs and Medicines <sup>1</sup> ..... \$	897,396	816,147	846,115 <sup>2</sup>	857,147
Dyeing and Tanning—					
22	Aniline and coal-tar dyes.....lb.	565,619	707,555	702,349	609,659
		357,470	455,397	436,051	417,149
23	Oak, quebracho, and similar extracts.....lb.	534,175	250,101	735,208	308,440
		18,089	9,552	27,484	12,580
	Totals, Dyeing and Tanning <sup>1</sup> ..... \$	603,024	683,293	694,930	599,075
24	Explosives..... \$	19,795	40,681	48,012	91,543
25	Fertilizers..... \$	3,396	51,675	33,241	3,968
26	Glycerine.....lb.	101,964	675,984	168,403	4,480
		10,270	106,969	50,491	711
Paints and Varnishes—					
27	Carbon black.....lb.	56,784	65,524	69,328	49,952
		3,098	3,543	3,624	1,857
28	Lithopone.....lb.	7,417,130	8,367,912	9,951,902	9,425,020
		256,732	301,419	382,915	351,454
29	Oxides.....lb.	1,204,588	1,491,019	1,621,168	1,360,284
		170,418	187,885	218,504	186,963
30	Ready-mixed paints.....gal.	27,483	28,052	34,394	25,137
		38,374	41,080	44,437	33,562
31	Varnish.....gal.	5,832	8,425	9,102	5,667
		11,021	14,624	14,461	10,049
32	Zinc white.....lb.	10,410,360	10,587,291	9,913,819	9,571,410
		398,292	408,730	510,015	352,429
	Totals, Paints and Varnishes <sup>1</sup> ..... \$	1,346,596	1,555,349	1,801,118	1,457,291

<sup>1</sup> Totals include other items not specified.<sup>2</sup> Revised since the publication of the 1939 Year Book.

## 13.—Principal Imports into Canada for Consumption from United

No.	Item.	United Kingdom.			
		1936.	1937.	1938.	1939.
<b>VIII. Chemicals and Allied Products—concl.</b>					
1	Perfumery..... \$	105,145	142,587	158,908	141,311
Soap—					
2	Laundry soap..... lb.	258,247	319,045	567,773	298,040
	..... \$	17,200	21,762	36,972	22,563
3	Toilet soap..... \$	51,500	64,612	73,200	76,511
	Totals, Soap <sup>1</sup> ..... \$	85,044	108,529	133,875	120,461
Chemicals, Inorganic, <i>n.o.p.</i> —					
4	Sulphate of alumina..... cwt.	82,885	105,325	127,191	114,109
	..... \$	64,638	83,797	109,787	103,772
5	Ammonia and its compounds..... \$	146,756	254,104	484,429	594,694
6	Compounds of tetra-ethyl lead..... lb.	2	2	38,853	Nil
	..... \$	—	—	17,576	—
7	Chlorine, liquid..... lb.	Nil	Nil	Nil	Nil
	..... \$	—	—	—	—
8	Calcium chloride..... cwt.	1,171	300	154	272
	..... \$	1,289	326	218	355
9	Potash and potassium compounds..... \$	97,509	87,185	71,357	121,480
10	Sodium compounds..... \$	935,842	1,017,527	1,070,937 <sup>3</sup>	1,030,917
	Totals, Chemicals, Inorganic, <i>n.o.p.</i> <sup>1</sup> ..... \$	1,725,016	1,722,021	2,172,543	2,157,824
	<b>Totals, Chemicals and Allied Products<sup>1</sup>..... \$</b>	<b>6,336,345</b>	<b>6,957,434</b>	<b>7,706,251</b>	<b>6,962,942</b>
<b>IX. Miscellaneous Commodities.</b>					
Amusement and Sporting Goods—					
11	Films..... \$	57,257	77,154	44,761	26,705
12	Dolls..... \$	5,548	3,994	11,370	10,267
13	Toys..... \$	189,825	200,756	178,623	169,644
	Totals, Amusement and Sporting Goods <sup>1</sup> ..... \$	540,510	572,211	577,570	584,699
14	Brushes..... \$	129,438	140,858	140,199	110,564
15	Containers (outside coverings).....	1,234,653	1,174,090	823,706	648,309
Household and Personal Equipment—					
16	Buttons..... \$	14,457	13,528	14,327	14,692
17	Cases and boxes, fancy..... \$	114,688	146,746	161,258	156,985
18	Jewellery, <i>n.o.p.</i> ..... \$	40,010	35,444	46,523	60,038
19	Pocket books, etc..... \$	158,102	170,506	180,358	134,366
20	Refrigerators..... \$	1,099	1,589	515	1,741
21	Tobacco pipes, etc..... \$	121,711	147,108	184,132	134,628
	Totals, Household, etc., Equipment <sup>1</sup> ..... \$	794,512	879,827	962,300	850,812
22	Musical instruments..... \$	57,731	88,507	80,170	83,697
Scientific and Educational Equipment—					
23	Philosophical and scientific apparatus..... \$	99,175	54,512	67,280	41,487
24	Surgical and dental instruments, etc..... \$	302,107	255,996	146,309 <sup>3</sup>	147,750
	Totals, Scientific and Educational Equipment <sup>1</sup> ..... \$	565,617	475,934	662,969	661,438
25	Ships and vessels..... \$	23,343	24,653	8,575	24,379
26	Vehicles, <i>n.o.p.</i> ..... \$	147,475	463,595	563,325	921,705
27	Works of art..... \$	218,518	385,235	346,443	391,584
28	Special imports..... \$	1,647,293	1,766,993	1,813,544	2,045,701
29	Cartridges..... \$	21,442	68,202	86,163	486,035
30	Electric energy..... kwh.	Nil	Nil	Nil	Nil
	..... \$	—	—	—	—
31	Express parcels..... \$	7,426	8,078	11,018	18,435
32	Pencils, lead..... \$	72,875	74,695	69,879	63,389
33	Post Office parcels..... \$	373,231	290,911	180,528	197,278
34	Precious stones..... \$	86,026	122,164	88,109	36,068
35	Settlers' effects..... \$	179,705	202,024	294,170	280,624
36	Waste-paper clippings..... cwt.	40,909	29,799	21,097	13,225
	..... \$	26,410	18,942	20,417	8,041

<sup>1</sup> In this classification the expression "Canadian Farm Products" refers, in the case of exports, to commodities actually produced, in their original state, on Canadian farms. In the case of imports, it covers all commodities of which the basic raw materials are such as Canadian farms produce. "Foreign Farm Products" covers, in both imports and exports, materials or commodities such as Canada does not produce in their original forms, e.g., cane sugar, tea, rubber, cotton, silk, etc.

**Subsection 10.—Comparison of the Volume of Imports and Exports.**

The statistics of the external trade of Canada are analysed in this subsection to reveal changes in the physical volume of external trade as well as in the dollar value of that trade. Value figures alone may be somewhat misleading when used to show the physical growth of production and external trade. When, for example,

Table 1 of this chapter is examined, it seems to show stagnation in external trade between the early 70's and the middle 90's of last century and a very rapid growth thereafter. Yet we know that the apparent stagnation is due partly to the fall in general prices between the '70's and the middle '90's, while the rapid growth of the later figures is exaggerated by the rise of prices after 1897, especially in the war period, 1914 to 1921. Since 1929 another precipitate decline in prices has exaggerated the actual decrease of trade. Thus the figures as published give us no true measure of the volume of external trade, yet, of the commodities that satisfy human needs, it is the *volume* rather than the *value* with which the masses of the population are more intimately concerned. Volume is, from many points of view, a more important consideration than value, and it is desirable to secure a record of the fluctuations in the volume of the country's trade as distinguished from the value thereof. This objective is attempted with regard to world trade in Sub-section 1 of this chapter in which the internationally familiar term 'quantum' has the same significance as 'volume' here. Table 21, which follows, serves the same purpose with regard to Canadian external trade.

The method adopted for ascertaining the fluctuations in volume has been to take a base year—1936—and to revalue the quantities of each commodity imported or exported in any given year at the average import or export value of that commodity in the standard or base year. Where quantities are not available, the values of items are assumed to have moved in the same direction and in the same proportions as closely related commodities. For this reason the results must not be regarded as of great precision but, since the value of goods not returned by quantity and of those not comparable over a limited series of years is small in comparison with the total trade, the amount of error introduced on this account is inconsiderable. By this method it is comparatively easy to compare the volume of the trade in a particular year with that in a recent year and the margin of error is fairly small. When, however, a comparison of the volume of trade in a particular year with that of a more remote year is undertaken, the margin of error is very much greater. Certain new commodities have come into existence in the course of the period, while the qualities of others have been materially changed; further, various new items have been added to the customs classifications, and it is not always possible to say just what customs items at present correspond with those of a year as long past as 1914. For these reasons comparisons with the pre-war fiscal year ended 1914 were discontinued after 1929. This comparison for 1929 and certain previous years appears at pp. 581-583 of the 1930 Year Book. For similar reasons the retention of 1926 as the base year was tending to lessen the reliability of recent calculations, and, consequently, 1936 has been taken as a new base year. Comparisons with 1936 are carried back to 1932 at pp. 583-585 of the 1938 Year Book.

In Table 21 the values and volumes of imports and exports, respectively, for the years 1934 to 1939 are compared with 1936, for the main groups, as follows: the imports and exports are first shown at the values at which the trade was recorded; the same imports and exports are then shown at the value they would have had if the average price or unit value had been the same in each year as it was in 1936. In other words, the figures on the basis of 1936 average values enable a comparison to be made of the imports or exports for the given years on the basis of variations in quantity only, variations due to different prices having been eliminated. Index numbers of declared values, that is, the total declared values of the imports or exports in each year expressed as percentages of 1936, are then given. These are followed by the index numbers of average values, which show the prices at which

goods were imported or exported in each year expressed as percentages of the prices in 1936. Finally, the index numbers of physical volume show the relative quantity of merchandise imported or exported in each year expressed as a percentage of the quantity of the same merchandise in 1936.

The fiscal year 1939 shows decreases in the volume of imports under most of the main groups as compared with 1938 figures, although all were higher than in 1936. The greatest change since the low period of the depression represented by the fiscal year 1933 is the increase in the imports of non-ferrous metals.

In the latter half of Table 21, dealing with exports, the index numbers of volume show a considerable drop from 1938 figures in the cases of the wood and paper, iron, non-metallic minerals, and animal products groups. The volume of agricultural and vegetable products increased from the low figure recorded in 1938 but the average values or the prices at which they sold in the world markets showed a substantial decrease. The volume of fibres and textiles exported continued to increase but prices were the lowest since 1933.

The index numbers of average values of total imports fell from 105.9 in 1938 to 96.3 in 1939, while the index of average values of total exports fell in the same period from 114.3 to 104.5. As prices of imports and exports fell by almost the same percentage, there was not much change in Canada's barter terms in world trade, which suffered so severely during the depression owing to the much greater decline in the prices of primary goods than in those of highly fabricated commodities. See also Subsection 1, pp. 501-508 regarding price disparities in world trade.

### Section 4.—The Tourist Trade of Canada.\*

**Tourist Expenditures in Canada.**—In recent years the tourist trade has become an important source of revenue in certain sections of the Dominion, materially affecting the balance of trade. It represents the economic disposition of national assets in which Canada is particularly rich, namely: its picturesque scenery; its invigorating climate; its opportunities for hunting, fishing, and boating, as well as for winter sports—for the exploitation of which a considerable capital expenditure has been made on hotel accommodation, improved highways, and other attractions. Those entering from the United States in automobiles are by far the most important class of tourist. The business accruing to the Dominion in this manner represents some return for expenditures on highways which have been very large in the period since the War of 1914-18. In order to attract this traffic, highways have been built through regions of picturesque scenery, such as the Rocky Mountains, northern Ontario, and the Laurentians and Gaspé in Quebec. A further asset for Canada arises from the fact that these scenic regions with their invigorating climate are at their best in the summer holiday season when motorists are most ready to travel. The expenditure of travellers coming to Canada from other countries has the same effect, in so far as its influence on the balance of trade is concerned, as the export of additional commodities would have. Indeed, in so far as commodities are sold to tourists travelling in the Dominion, the exportable surplus of such commodities is reduced.

It is impossible to obtain a direct record of expenditures of this kind. Moreover, even a rough estimate of the total is extremely difficult to make, as visitors to Canada are of all classes, engaging in widely different activities or forms of recreation, remaining for varying periods, with expenditures undoubtedly ranging from very small to very large amounts.

Tourists who enter Canada may be divided into two broad classes: (1) those coming in via ocean ports; and (2) those entering from the United States. The latter may be subdivided into entries by (a) automobile, (b) rail or steamer, and (c) other modes of travel, as bus, aeroplane, ferry, etc. In 1939 these classes are estimated to have expended in Canada: (1) \$12,000,000; and (2) \$262,000,000, with entries under (a) \$168,000,000, (b) \$73,000,000, and (c) \$21,000,000.

The Department of National Revenue records the number of tourists entering Canada in automobiles from the United States through each of the ports of entry along the Border. Estimates of the expenditures of tourists of this class in 1939, according to the Provinces by which they entered, are as follows: Maritime Provinces, \$14,000,000; Quebec, \$27,000,000; Ontario, \$112,000,000; Manitoba, \$3,000,000; Saskatchewan, \$1,000,000; Alberta, \$1,000,000; and British Columbia, \$10,000,000.

**Expenditures of Canadian Tourists Abroad.**—Canadian tourists visiting other countries may be classified in the same way as tourists entering Canada. The total expenditures of such Canadian tourists to other countries were estimated in 1939 to be as follows: to overseas countries, \$14,000,000; to the United States by automobile, \$44,000,000; to the United States by rail or steamer, \$30,000,000; and to the United States by other modes of travel, \$21,000,000; a total of \$109,000,000.

\* Abridged from "The Tourist Trade in Canada, 1920-26", and reports for each year from 1927-39, inclusive, published by the Dominion Bureau of Statistics. These reports contain full explanations of the methods used in making the estimates.

<sup>1</sup> Information not available on a comparable basis.  
rates of exchange for the period.

<sup>2</sup> Converted into Canadian funds at average

Until the depression made itself felt in 1930, there was a steady increase in the amounts spent both by tourists from other countries in Canada and by Canadians in other countries. During the years 1930-32 the tourist trade, in spite of successive declines, exhibited a surprising vitality as compared with the generally depressed state of trade and industry. In each of these years the expenditures of tourists in Canada (and in the latter two the balance after deducting the corresponding expenditures of Canadians in foreign countries) constituted an 'invisible' export of greater value than any single commodity exported. A marked contraction in both volume of travel and tourist expenditures occurred in 1933 and conditions in 1934 were very little better. A pronounced improvement in tourist trade took place in 1935 and since then it has maintained a level approximating that existing before the depression.

The depressing effect of the outbreak of war in September, 1939, was particularly noticeable in the case of motor travel between the United States and Canada. Sixty-day permits issued to automobile tourists, which had increased by 2.5 p.c. to the end of August as compared with the corresponding period of 1938, declined by 5.2 p.c. in the last four months of the year as compared with the same months of 1938. Cars entering on 48-hour permits fell 2.8 p.c. to the end of August and 8.2 p.c. during the remainder of the year. Toward the end of the year, the declining tendency was checked somewhat. As compared with the corresponding months of 1938, entries of cars on 60-day permits declined 2.8 p.c. in September, and 14.0 p.c. in October but only 1.4 p.c. in December, while cars staying for 48 hours or less declined 5.5 p.c. in September, 17.2 p.c. in October, and 0.8 p.c. in December.

For the year as a whole, automobile travel to Canada declined by only 3.1 p.c. Moreover, this decline was accounted for wholly by a falling-off in the number of short-stay cars since those on 60-day permits increased by 4,342, and those on 6-month permits by 229. The number of tourists travelling by rail rose 3.0 p.c. and those travelling by boat also rose by 0.9 p.c.

## Section 5.—Balance of International Payments.\*

Statements of the Canadian balance of international payments provide an annual summary of the current transactions in merchandise, gold, and services, and the movements of capital between Canada and other countries. Thus, besides the visible balance of merchandise trade, account is taken of the less apparent exchanges of services and capital frequently termed the 'invisible' items. The statement is divided into two accounts, the current account and the capital account, in order to distinguish current income and disbursements from transactions on capital account.

**Transactions on Current Account.**—The current account includes all current transactions in goods, gold, and services. The total credits in the account show estimates of credits received by Canada each year from the sale of merchandise, gold, and services to other countries, while total debits include estimated payments to other countries by the Dominion for purchases of merchandise or services, including payments of interest and dividends on British and foreign investments in Canada. Therefore, the current account furnishes a measure of the total external income and disbursements of the nation. It also indicates the net movement of capital between Canada and other countries each year, for any difference between current income and disbursements abroad must, in theory, reflect a movement of capital. For example, when credits on current account exceed debits there is a credit balance reflecting an outflow of capital from Canada, as current income from abroad is greater than all disbursements of a current character abroad under such circumstances, the resulting surplus supply of foreign exchange being utilized either to increase Canadian capital assets abroad or to reduce capital liabilities abroad. Conversely, when disbursements abroad on current account exceed external income there is a debit balance reflecting an import of capital. In other words, to obtain foreign exchange under the latter circumstances to meet the excess of current disbursements over income, Canada either has borrowed capital abroad or disposed of or withdrawn Canadian assets abroad. Thus, while the balancing item of the current account reflects the net movement of capital, its accuracy is limited by the degree of completeness and precision attained in the estimates of the current account items. Furthermore, it is at best only a measure of the net movement of capital and therefore does not disclose the great diversity and large volume of movements of capital revealed by the direct analysis of capital movements in the capital account.

**Capital Movements.**—The capital account delineates the movements of capital between Canada and other countries. The broad distinction between transactions appearing in the current account and those appearing in the capital account lies in the fact that the former group represents payments for current purchases of goods or services, whereas the latter group are on capital account and usually reflect changes in either Canada's external assets or liabilities, although all changes of the latter type, it should be noted, do not give rise to movements of capital. Thus, the capital account performs a dual function. It indicates the general significance of capital movements in the foreign exchange market and accordingly, along with the current account, throws light upon the background of transactions upon which the foreign exchange value of the Canadian dollar is dependent. It also makes it possible to appraise the effects of the movements of capital, during any period, upon the Canadian balance of international indebtedness. The potential effects of capital movements upon the Canadian economy may be appreciated only by studying

\* Revised under the direction of Herbert Marshall, B.A., F.S.S., Chief of the Internal Trade Branch of the Dominion Bureau of Statistics.

the volume and character of the various counter movements. Often, although the net movement of capital during a period may be relatively small, the significant effects that the gross movements have upon the composition of the foreign assets and liabilities of Canada may be considerable.

The Dominion Bureau of Statistics has recently completed a comprehensive study of the Canadian balance of international payments from 1926 to date and, consequently, it is now possible to draw up for this period revised statements of the balance of payments that incorporate new information that has become available.\* Of special interest is the detailed analysis of capital movements between Canada and other countries that has been revealed in the capital account.

**Gold Held under Earmark by the Bank of Canada.**—Since February, 1936, the Bank of Canada has been holding gold under earmark for clients abroad. These holdings presumably may be of either domestic or foreign origin. The physical movement of gold into or out of Canada is recorded in the trade tables as explained on pp. 499-501. Changes in the gold held under earmark involve international financial transactions which are considered in estimating Canada's balance of international payments (see Table 25). A table on p. 563 of the 1939 Year Book gives this information by months, for the years 1937 and 1938. Since the outbreak of war in September, 1939, the Bank of Canada has not released information regarding the holdings of gold under earmark.

### **Subsection 1.—The Geographical Distribution of Transactions in the Canadian Balance of International Payments.**

There are important counter movements within the Canadian balance of payments that are disclosed by an analysis of the geographical distribution of transactions. While this distribution of transactions is based upon less well-defined data than the totals for all countries, the analysis shown in Table 23 does reveal the main outlines of the commercial and financial relations between Canada and the United Kingdom, the United States, and other countries. It throws light upon the external sources of demand for Canadian goods and services and the origin outside of Canada of foreign goods and services purchased or received by Canadians. It also shows the direct source and destination of movements of capital although the beneficial ownership or ultimate destination of capital may not always be disclosed. Statistics of the balance of payments by countries, it should be noted, do not reveal the currencies in which transactions are executed. In general they represent the country of residence of the participants (of transactions) rather than currencies.

With few exceptions, the broad outlines of the transactions with each country have been consistent in the five years from 1934 to 1938. In each year there have been large balances of credits in the current accounts with the United Kingdom and with other overseas countries, while there were debit balances of varying importance in the current account with the United States, with the one exception of 1935, when debits and credits in current account dealings with the United States practically balanced. The predominant direction of the capital movements between Canada and each country was also generally consistent. The most pronounced movement was the large net outward movement of capital to the United States in each year varying from \$226,200,000 in 1936 to \$100,400,000 in 1938. There were also movements of capital on balance to the United Kingdom in four of the five years, although of more moderate proportions. The exceptional year was 1934 when

\* "The Canadian Balance of International Payments—A Study of Methods and Results"; also annual reports on the Canadian Balance of International Payments; published by and obtainable from the Dominion Bureau of Statistics.

the net inflow of capital from the United Kingdom was almost \$100,000,000. In three of the five years, 1935, 1937, and 1938, there were appreciable inflows of capital on balance from other countries.

In general, the distribution of commercial and financial dealings shown in the pattern described above discloses that surplus receipts from the United Kingdom and other countries have been used in recent years to settle the excess of payments to the United States on both current and capital account. In each year the main sources of net credits were in the current accounts with the United Kingdom and overseas countries. In some years credits on capital account with these countries also contributed to the available surplus. In most years the capital account with the United States gave rise to the largest balance of debits although net debits on current account with the United States were also heavy in some years. Outflows of capital to the United Kingdom in four of the years also added to the balance of debits.

With the advent of war, the outlines of the balance of payments may be expected to change considerably from those described above. Some of the developments that will undoubtedly alter the character of both the current and capital accounts are: greater concentration of activity in certain channels; the increased importance of public finance; the introduction of foreign exchange and other controls; realignments of foreign exchange rates; and the regulation of international capital movements.

<sup>2</sup> In 1939 this item represents "Net Exports of Non-monetary Gold".  
<sup>3</sup> Difference between balancing items of current and capital accounts.

### Subsection 2.—Balance of Payments in Recent Years.

The outstanding features of the Canadian balance of international payments in the five years 1934 to 1938 have been the credit balances on current account in each year reflecting substantial surpluses of current external income over and above all current disbursements abroad. Large credit balances from exports of merchandise and from the tourist trade and growing credits from the sale of gold were more than sufficient in each year to meet payments to other countries on account of interest and dividends, freight, and miscellaneous services.

The large outflow of capital indicated by the credit balances on current account is analysed in the capital account. In each year there have been large outward movements of capital for the retirement of Canadian securities owned abroad with accompanying reductions in the contractual liabilities abroad of Canadian debtors. Other security transactions arising from the international trade in outstanding securities have in each year, except 1937, resulted in inflows of capital indicating a sustained external demand for Canadian securities. Other capital movements during the period under review have been outward in large volume and have been connected with the activities of banks, insurance companies and other financial institutions, and international direct investments. The movements of capital during the period have had the effect of reducing materially the contractual liabilities abroad of Canadian borrowers, with accompanying declines in the interest payments on externally held Canadian bonds, as well as of increasing somewhat Canadian assets abroad.

Current external income in 1937 and 1938 was large. In both years there were very substantial balances of credits on current account, although these were smaller than in 1936. As total credits on current account were greater in 1937 than in 1936, the contraction in the credit balance is explained by the fact that a greater increase in total external disbursements on current account took place in 1936. While the credit balance on merchandise account was reduced in 1937, there were substantial increases in credits from gold and the tourist trade which offset in part the decline in merchandise credits and the increase in debits for interest and dividends, freight, and miscellaneous services. In 1938 the credit balance on current account was somewhat smaller than in 1937 as total debits declined less than total credits. The principal changes in 1938 are reflected in smaller credit balances from the merchandise and tourist trades and in larger receipts from gold; together with a slightly higher debit balance on account of interest and dividends.

The net outward movement of capital was heavy in both 1937 and 1938, although smaller than in 1936. The extraordinarily large outflows in 1935 and 1936 for the redemption of Canadian securities owned outside of Canada were considerably reduced in 1937 and 1938 as a result of the development of less favourable conditions for refinancing. The net movement of capital from the trade in outstanding securities was outward on balance in 1937, in contrast to inward movement in 1938 and other recent years. Other capital movements continued to be outward on balance and heavier in both 1937 and 1938 than in previous years. A smaller part of the total outflow of capital in 1937 and 1938 was employed for the reduction of Canadian liabilities abroad than in the two preceding years.

## 24.—Estimated Balance of International Payments, 1937 and 1938.

NOTE.—If the estimates of the current and capital items below were absolutely correct and all inclusive, the balancing item of the current account and the balancing item of the capital account would be equal. The difference between these two amounts in the statement represents either errors in the computations or the omission of transactions that could not be traced at the time the tables were prepared. Figures for both years are subject to revision. Corresponding figures for earlier years back to 1926 may be found in the report "The Canadian Balance of International Payments—A Study of Methods and Results", issued by the Dominion Bureau of Statistics.

SECTION 5. BOUNTIES.....	608		

Internal trade is broad and complicated: it encompasses all values added to commodities traded in provincially and interprovincially by agencies and services connected with the storage, distribution, and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. It even embraces such services as those directed to the amusement of the people, such as theatres, sports, etc.

The diverse resources of the various parts of the country have led to a vast exchange of products and the task of providing goods and services where they are required for consumption or use by a population of 11,315,000 accounts for a greater expenditure of economic activity than that required for the prosecution of Canada's great volume of external trade, high though the Dominion ranks among the countries of the world in this field.

### Section 1.—Interprovincial Trade.\*

Canada may be divided into the following five economic regions, each deriving its specific character from the predominant occupations of its people:—

1. *The Eastern Fishing, Lumbering, and Mining Region*, comprising the River Valley and Gulf of the St. Lawrence, together with the Atlantic Coast; in other words, the greater part of the Maritime Provinces, the northern part of the Province of Quebec (excluding the former District of Ungava), and a portion of northern Ontario.

2. *The Eastern Agricultural and Industrial Region*, comprising the cultivated portions of the Maritime Provinces and of the Provinces of Quebec and Ontario. In the latter provinces the cultivated areas extend along the banks of the St. Lawrence and its tributaries.

3. *The Central Agricultural Region*, extending from the Red River Valley to the Rocky Mountains and from the International Boundary to about 56° N. lat.

4. *The Western Fishing, Mining, and Lumbering Region*, comprising the western portion of the Province of Alberta, the whole of British Columbia, and the southern portion of Yukon.

5. *The Northern Fishing, Mining, and Hunting Region*, extending from the regions of permanent settlement northwards, and from the boundary of Labrador to the Pacific and to the Alaskan boundary. This vast region is sparsely inhabited by indigenous nomadic tribes engaged in fishing and hunting for their own support or for exchange with the fur-trading companies, and with individual traders who visit the region. In recent years mining activity has been developing in this region, especially along its southern fringe and in the basin of the Mackenzie River. In the east, a well-equipped port is located at Churchill. The Hudson Bay Railway and

\*Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch, Dominion Bureau of Statistics.

this ocean terminal provide a short route to Europe for the products of the Prairie Provinces.

Great differences exist between the products of these various regions; even the fisheries and lumber products of the East are quite distinct from those of British Columbia. The needs of the people throughout the country are met to a great extent by the exchange of the products of one region for those of another.

Interprovincial trade in what is now Canada had its beginning, many years before Confederation, in the exchange of the furs and lumber products of Upper and Lower Canada for the fisheries and mineral products of the Maritimes. There is now a large trade of manufactured and raw materials between the economic regions of the Dominion, although large proportions of British Columbia's lumber, minerals, fish, and fruits; the Prairie Provinces' agricultural products; Ontario's minerals; Quebec's wood-pulp, paper, and asbestos; and the Maritime Provinces' lumber, potatoes, fruit, and fish are exported to foreign countries. The products thus exchanged are carried principally on the railways, and, to a lesser extent, on the St. Lawrence River and Great Lakes. In late years an increasing amount is being carried over the highways by motor-trucks.

Monthly and annual railway traffic reports, published by the Bureau of Statistics, show provincial and Dominion *revenue* freight traffic divided into 76 classes of commodities. The data also show the quantity of each class that originated and terminated in each province, and are of use in computing the net imports and exports of each province for each class of commodity. These statistics show rail traffic only, a limitation that should be borne in mind in connection with the trade of provinces having water transportation. The totals, however, give no indication of how the imports of manufactures are offset by the exports of grain, coal, etc., in particular provinces. Such analyses are possible only from the detailed data.

The revenue freight traffic movement on the steam railways of Canada fluctuates to a certain extent with the yield of the crops and with activity in the mining and construction industries involving heavy movements of low-grade freight. The general trend from 1921 to 1928 was upward, increasing from 83,814,436 tons of freight carried in 1921 to 119,227,758 tons in 1928. In 1929, however, a decrease to 114,600,778 tons was reported and, with the industrial depression, there were still greater decreases to 57,099,111 tons in 1933, but traffic began to improve during the last six months of 1933 and the total for 1934 was 18 p.c. greater than for 1933. The rate of increase was reduced somewhat during the first half of 1935 but continued to the end of 1937. In 1938 the figures were back at about the 1936 level, but for 1939 another advance was shown.

<sup>1</sup> The freight originating and that terminating will not agree because that which originates within a certain year does not all terminate within the same year. On the other hand, some that terminated in 1939, for instance, originated within the previous year.

**Section 2.—The Grain Trade.****Subsection 1.—Governmental Agencies Regulating or Co-operating with the Grain Trade.**

The agencies exercising control of the grain trade in Canada are: the Board of Grain Commissioners, which administers the provisions of the Canada Grain Act, 1912; and the Canadian Wheat Board, which operates under the Canadian Wheat Board Act, 1935. An article on the Canadian Wheat Board and its operations down to February, 1939, was specially prepared for the 1939 Year Book by T. W. Grindley, Ph.D., Secretary of the Board, and appears at pp. 569-580 of that edition.

**THE BOARD OF GRAIN COMMISSIONERS.**

This Board was established in 1912 under the authority of the Canada Grain Act (c. 27, 1912). It assumed functions in regulation of the grain trade that were formerly carried out under the Manitoba Grain Act and the Inspection and Sale Act. The Board consists of a Chief Commissioner and not more than two other Commissioners, appointed by the Governor in Council for periods of ten years. The chief offices of the Board are located in Winnipeg.

The Board is responsible for the administration of the provisions of the Canada Grain Act and its functions relate to: the grading and weighing of grain; deductions from grain for dockage; shortages appearing upon the delivery of grain into or out of any elevator; the unfair or discriminatory operation of any elevator; the deterioration of grain during storage or treatment; and any other provisions of the Act, or regulations made or licences granted thereunder.

**The Canada Grain Act.**—The Canada Year Book, 1922-23, contains at pp. 581-583 a historical summary of the more important points respecting the shipment, inspection, and sale of Canadian grain under the Canada Grain Act, and an outline of the Canada Grain Act of 1925 appears at p. 1017 of the 1925 Year Book. The 1929 amendments are dealt with at pp. 1047-1048 of the 1930 Year Book, and the Canada Grain Act, 1930, at p. 1101 of the 1931 Year Book.

**Subsection 2.—Movement of Canadian Wheat, Crop Year 1938-39.\***

A résumé of the movement begins with a description of the crop in the Western Inspection Division. The 1938 wheat production in the four western provinces amounted to 337.4 million bushels. A carryover of 14.6 million bushels from the previous crop year and an import of 474,200 bushels brought the supplies of the Western Division to a total of 352.5 million bushels for the Aug. 1, 1938-July 31, 1939, crop year. As for distribution, 233.4 million bushels were commercially disposed of, the chief items of which were 30.5 millions exported to the United Kingdom and 147.7 millions shipped to the Eastern Division. Direct exports to the United States were 28.6 millions, and to other countries 9.9 millions. The total shipments from the Western Division were thus 216.7 million bushels. Wheat used by the milling companies for the manufacture of flour amounted to 16.7 million bushels, of which 13.6 millions were ground into flour for domestic consumption. The rail movement eastward from the Western Division amounted to 1.3 million bushels. Lake shipments from Fort William-Port Arthur were 177.1 million bushels, with 146.6 millions going to Canadian ports and 30.2 millions to United States ports. The principal Canadian lake ports were those of Lake Huron and Georgian Bay, to which 44.4 million bushels were consigned, and Port Colborne with a consignment of 34.8 million bushels. Among the United States ports, Buffalo was of principal importance with 19.1 million bushels consigned to that port. Export clearances of wheat through Vancouver-New Westminster amounted to 38.2 million bushels, while Victoria cleared 1.2 million. Export clearances from Churchill were 916,913 bushels, while direct overseas shipments from Fort William-Port Arthur totalled 337,093 bushels. Seed requirements for the Western Division were 32.8 million bushels; wheat fed to live stock and poultry totalled 14.1 millions; and the carryover at the end of the crop year amounted to 49.2 million bushels.

The Eastern Division received during the crop year not only the eastern crop, estimated at 22.6 million bushels, but also shipments from the West aggregating 147.7 millions. The quantity on hand at the beginning of the crop year was 8.9 million bushels, making, with an importation of 1.4 millions, a total supply for the Eastern Division of 180.6 million bushels. The distribution during the 1938-39 crop year included 73.0 million bushels exported from St. Lawrence ports, 3.2 millions exported from Saint John and Halifax, and 635,517 bushels exported to the United States for consumption and milling in bond. In addition, 12.2 million bushels from both Western and Eastern Divisions were cleared for export to the United Kingdom and other countries via the United States Atlantic ports of New York, Albany, Boston, Philadelphia, and Baltimore. Eastern flour mills used 51.2 million bushels. The carryover at the end of the crop year in the Eastern Division totalled 45.4 million bushels.

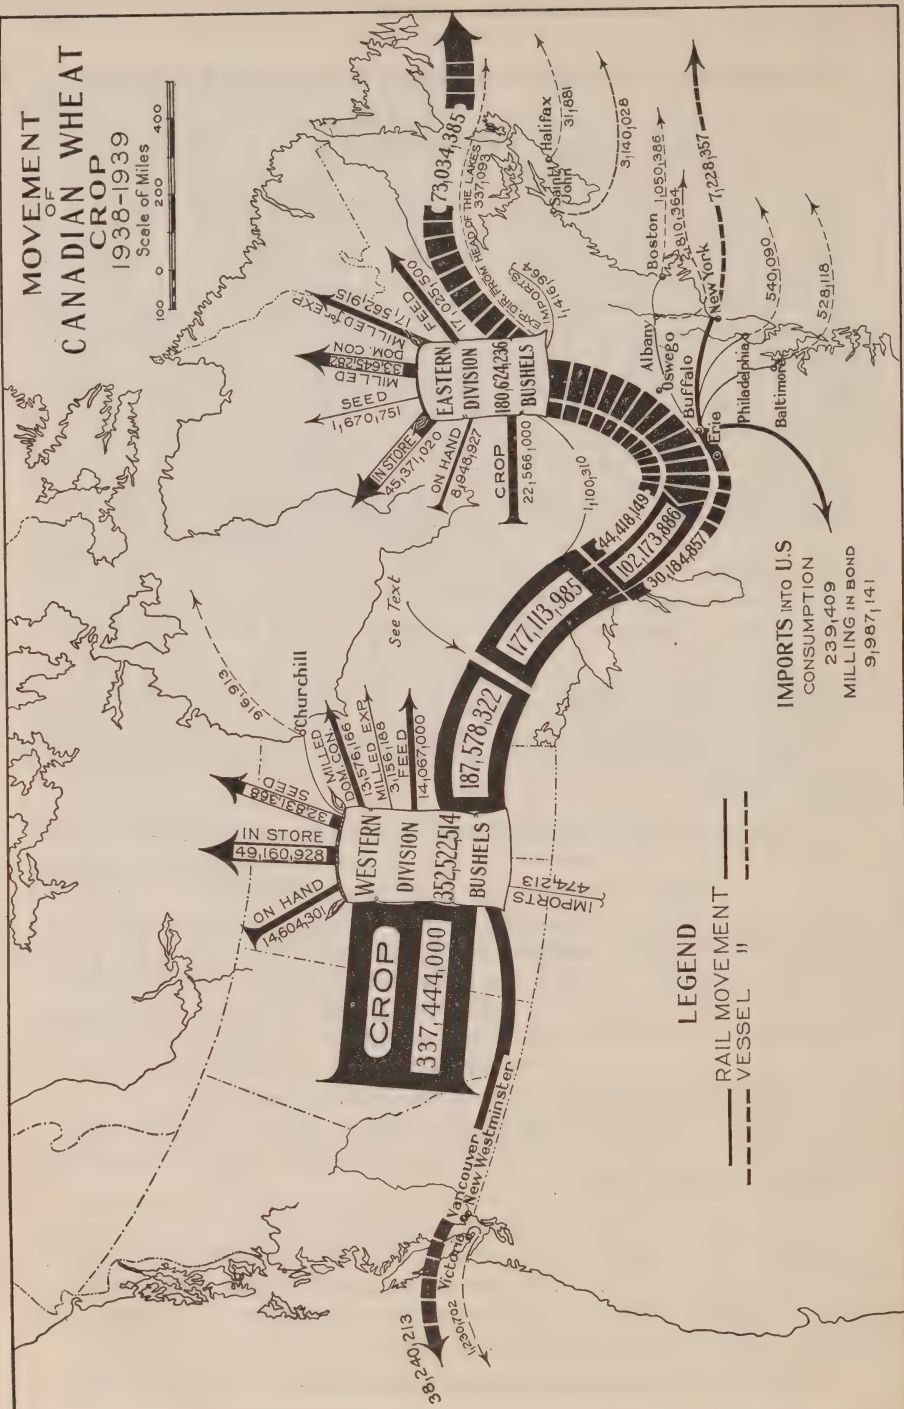

Total export clearances of Canadian wheat during the 1938-39 crop year amounted to 139.3 million bushels, including 76.2 millions to the United Kingdom, 10.2 millions to the United States, and 52.9 millions to other countries. In addition, 20.7 million bushels of wheat were exported in the form of flour bringing the total export movement to 160 million bushels.

\* Revised in the Agricultural Branch, Dominion Bureau of Statistics.

# MOVEMENT OF CANADIAN WHEAT CROP 1938-1939

Scale of Miles

## 2.—Production, Imports, Exports, and Home Consumption of Wheat in Relation to Population in Canada, Crop Years Ended July 31, 1930-39.

NOTE.—Statistics from 1868 to 1928 appear at p. 583 of the 1939 Year Book.

<sup>1</sup> Wheat flour has been converted into bushels of wheat at the average rate of 4½ bu. to the barrel of 196 lb. of flour.

**Per Capita Consumption of Wheat Milled for Food in Canada.**—The average annual per capita consumption of wheat ground for human food in Canada during the ten years 1929 to 1938 was 4.0 bushels. The range for the period was between 3.8 and 4.4 bushels. The per capita consumption in 1938 was estimated at 3.8 bushels. Details for the years 1919-27 are given at p. 241 of the 1929 Year Book. Annual estimates are published in the April number of the "Monthly Bulletin of Agricultural Statistics".

### Subsection 3.—Distribution, Storage, and Inspection of Principal Canadian Field Crops.

**Distribution of Wheat, Oat, Barley, Rye, and Flaxseed Crops.**—In the following tables the available stocks of five important field crops and the disposition of these crops is calculated for the years 1938 and 1939. The carryover represents grain in the elevators, on farms, in transit, etc. A considerable quantity of grain is retained each year for seed. In the case of wheat, by far the larger part is exported or milled domestically for food. Large quantities of flaxseed are imported each year and most of the available stock is prepared in Canada for home consumption.

The bulk of the oat crop is consumed as feed for live stock and over half of the total stocks of barley and rye are disposed of in the same way. In addition to the balances for home consumption as grain, the amounts not in merchantable condition or lost in cleaning are used mainly for feed. Therefore, these two items should be added to the balances for home consumption as grain, in order to get the apparent consumption of grains by live stock. This, of course, does not take into account the feeds, such as bran, shorts, and gluten, obtained as by-products from milling processes.

### 3.—Distribution of the Canadian Wheat Crops, Crop Years Ended July 31, 1938 and 1939.

NOTE.—Flour is expressed as wheat on the basis of one barrel of flour, weighing 196 lb., being equal to  $\frac{1}{4}$  bushels of wheat. Figures for earlier years will be found in previous editions of the Year Book.

**Storage and Inspection of Grain.**—The growth of Canadian elevators in number and capacity has accompanied the expansion of grain acreage in the present century. Canadian elevators in 1901 numbered 426 with a capacity of 18,329,352 bushels; in 1911, 1,909 elevators and 105,462,700 bushels; and in 1921, 3,855 elevators and 231,213,620 bushels. There were, in 1939, 5,822 elevators with a capacity of 422,824,220 bushels.

### 8.—Numbers and Storage Capacities of Canadian Grain Elevators, Licence Years 1938 and 1939.

NOTE.—Detailed statistics of elevators for the years 1901 to 1918 are given in the 1921 Year Book, pp. 507-509, and the figures for later years will be found in successive Year Books.

<sup>1</sup> Receipts only.

**Flour Milling in 1938.**—The flour- and feed-milling industry in Canada in 1938 showed a decrease of 6 in the number of mills of all classes from 1937; in capacity an increase of 99 barrels of flour a day over 1937 was shown. Capital investment was \$50,111,006. The mills were distributed by provinces as shown in the statement appearing in the Manufactures chapter at p. 408. Statistics of the employees, value of products, etc., for both flour and feed mills, for the latest year available, will be found in Table 9 of the chapter on Manufactures, pp. 414-415.

### Section 3.—Marketing of Live Stock and Live-Stock Products.\*

The estimated value of animals sold for meat in Canada in 1938 was \$136,846,000. In addition, the 1938 wool production was worth \$1,565,000 and the farm value of poultry and eggs produced was \$53,748,000. Live stock makes a very important contribution to farmers' income and also provides the basis for a large slaughtering and meat-packing industry in Canada. Since the War of 1914-18 the slaughtering and meat-packing industry has been one of the most important single manufacturing industries in Canada.

**Live-Stock Marketings, 1938.**—The numbers of all classes of live stock sold at stockyards showed decreases in 1938 as compared with 1937. Cattle sold numbered 785,636 in 1938 and 999,332 in 1937, calves 465,753 and 544,428, hogs 700,877 and 1,037,788, and sheep and lambs 369,247 and 395,957, respectively.

\* Revised in the Agricultural Branch, Dominion Bureau of Statistics. For more detailed information on this subject, see: Canada Year Book, 1922-23, pp. 594-595; "Live Stock and Animal Products Statistics", published annually by the Dominion Bureau of Statistics; and the "Annual Market Review", published annually by the Live Stock Branch of the Dominion Department of Agriculture. Statistics of live stock and poultry are given at pp. 211-214 of this volume.

In Table 15 are given the statistics of the grading of animals from several provinces marketed through the stockyards in 1938 and, in the case of hogs, those marketed direct to packers, since a majority of these animals are handled in this way. In recent years the practice is developing of grading an increasing proportion of hogs by the carcass after being dressed at the packing plant. Hogs graded by each method are shown separately.

**Slaughtering and Meat Packing.**—This industry has become one of the most important branches of manufacturing in Canada. Its growth has been accompanied by a concentration of the major part of the production of the industry into a comparatively small number of large establishments, thereby facilitating the utilization of by-products and greater efficiency of operation. There has been a large increase in the number of establishments since 1930, only 76 firms having reported in that year, whereas in 1931 the number was 147, owing to the inclusion of wholesale butchers operating small plants engaged in slaughtering only. The inclusion of these small establishments did not affect materially the value of production of the industry, which increased from \$3,799,552 in 1870 to \$7,132,831 in 1890, and to \$22,217,984 in 1900. In the next decade it more than doubled, attaining a value of \$48,527,076 in 1910, and by 1920 a value of \$240,544,618 (the highest on record) was recorded. In 1938 it was \$175,767,382, as compared with \$181,419,311 in 1937.

**Consumption of Animal Products.**—The consumption of animal products such as meat, butter, and eggs is generally more pronounced in the case of people with a high standard of living. In Canada there is a relatively high per capita consumption of beef, pork, butter, and eggs but a relatively low per capita consumption of mutton and lamb, and cheese. During the depression years, the per capita consumption of these products was not affected as much as might have been expected. Changes in the per capita consumption of various animal products occur as a result of changes in price relationships. These, in turn, are related to cycles of over- and under-production particularly marked in the case of the meat products of hogs and cattle. Beef and pork interchange in leadership as regards the amount consumed, according to the price relationships between them.

# 17.—Production, Imports, Exports, and Total and Per Capita Consumption of Meats and Live-Stock Products in Canada, 1933-38.

NOTE.—The statistics in this table have been extensively revised. Revised figures for meats for 1920-32 are given at pp. 80-81 of the "Monthly Bulletin of Agricultural Statistics" for February, 1940.

**Export and Import Trade in Live Stock and Live-Stock Products.**—The exports of live stock and live-stock products from the Dominion to the United Kingdom, the United States, and all countries, are shown for the four fiscal years 1936-39, in Table 12 of the chapter on External Trade, at pp. 536-547, and imports in Table 13 at pp. 548-567. Exports and imports by calendar years 1934-38, may be found at pp. 71, 75, and 76 of the report on "Live Stock and Animal Products Statistics, 1938". At pp. 60-88 of the "Quarterly Report on the Trade of Canada for December, 1939" figures are given of exports of animals and animal products for 1938 and 1939 and imports of this class for the same calendar years will be found at pp. 236-261 of the same report.

## Section 4.—Cold Storage.

**Cold Storage Warehouses.**—Under the Cold Storage Act, 1907 (6-7 Edw. VII, c. 6), now consolidated as c. 25, R.S.C., 1927, subsidies have been granted by the Dominion Government to encourage the construction and equipment of cold storage warehouses open to the public, the Act and regulations made thereunder being administered by the Department of Agriculture.

### 18.—Cold Storage Warehouses in Canada, by Provinces, 1939.

NOTE.—The figures in this table, which do not include creameries with mechanical refrigeration, were supplied by J. F. Singleton, Associate Director of Marketing Services, Dairy Products and Cold Storage, Dominion Department of Agriculture.

Province.	Subsidized Public Warehouses.				All Warehouses.

**Cold Storage Stocks.**—Statistics of the stocks of food in cold storage and wholesale warehouses and in dairy factories of Canada are collected and published monthly by the Agricultural Branch of the Dominion Bureau of Statistics. A summary of cold storage reports is published annually giving final figures of the holdings, with some statistical measurements and charts. Foods reported are: (1) dairy and poultry products; (2) meat and lard; (3) fish; and (4) fruit and vegetables. The data in (1) and (2) are also included in the report on "Live Stock and Animal Products Statistics", published annually.

### 19.—Stocks of Canadian Food on Hand in Cold Storage Warehouses in Other Warehouses, and in Dairy Factories, 1938 and 1939.

NOTE.—The statistics of monthly stocks of eggs in 1938, published at p. 597 of the 1939 Year Book, have been revised materially. The corrected figures are shown at pp. 43-45 of "Live Stock and Animal Products Statistics, 1938".

## Section 5.—Bounties.\*

In cases where it is considered advisable for the Government to encourage the production of a particular commodity, bounties paid by the Government are recognized substitutes for protective duties. In the past they have been made use of by Canada to a considerable degree, but the only bounties that involved payments in the past few years were those on copper bars and rods, hemp, and bituminous coal mined in Canada and used in the manufacture of iron or steel. The bounty on bituminous coal was the outcome of a recommendation of the Royal Commission on Maritime Claims relating to the use of Canadian coal in the manufacture of iron and steel and the payments have been as follows:—

Paid in the fiscal year—

1930-31.....	273,148 net tons at 49½c.....	\$ 135,209·23
1931-32.....	126,356 net tons at 49½c.....	62,546·18
1932-33.....	118,783 net tons at 49½c.....	58,797·54
1933-34.....	213,841 net tons at 49½c.....	105,851·25
1934-35.....	336,849 net tons at 49½c.....	166,740·02
1935-36.....	390,168 net tons at 49½c.....	193,133·12
1936-37.....	564,695 net tons at 49½c.....	279,523·96
1937-38.....	583,817 net tons at 49½c.....	288,989·41
1938-39.....	369,434 net tons at 49½c.....	182,869·80
1939-40 to Oct. 31, 1939.....	267,019 net tons at 49½c.....	132,174·39
Totals.....	3,244,110	1,605,834·90

Bounties have been paid at various times in the past on iron and steel, lead, crude petroleum, manila fibre, zinc, and linen yarns, but the bounties on iron and steel ceased in 1911, on lead in 1918, on zinc in 1921, on linen yarns in 1923, and on crude petroleum in 1927. The total amounts paid in bounties on these commodities between 1896 and the date of expiration were: iron and steel, and manufactures of (1896-1912), \$16,785,827; lead (1899-1918), \$1,979,216 for 1,187,169,878 lb.; zinc† (1919-21), \$400,000; linen yarns (1921-23), \$17,523; manila fibre (1903-13), \$367,962; crude petroleum‡ (1905-27), \$3,457,173 on 233,135,217 gallons. Total payments for expired bounties between 1896 and 1932, including the \$611,763 paid on copper bars and rods§ and the \$26,847 for hemp,‡ aggregated \$23,646,311, which, with the \$1,122,384 paid for coal, makes a total of \$24,768,694 to Oct. 31, 1937. The Year Book of 1915, pp. 459-461, gives a description of the bounties that had been payable since 1883, as well as tables showing, for each commodity, the quantities on which bounties were annually paid and the amounts of such bounties for the years 1896 to 1915, inclusive.

## Section 6.—Patents, Copyrights, and Trade Marks.§

**Patents.**—Letters patent, which in England have been in the gift of the Crown from the time of the Statute of Monopolies (1624) and earlier, are a statutory grant in Canada and have always been so. An Act was passed in Lower Canada in 1824 wherein provision was made for the granting of patent rights to inventors who were British subjects and inhabitants of the Province. Upper Canada passed its Act in 1826, and Nova Scotia and New Brunswick passed theirs at later dates. In 1849, after the Union, a consolidating Act was passed applying to both Upper and Lower Canada, and the B.N.A. Act assigned the granting of patents exclus-

\* Revised by L. T. Lett, Department of Trade and Commerce.

† For details of bounties on zinc and crude petroleum, see p. 635 of the 1927-28 Year Book.

‡ A statement of the bounties paid under the Copper Bounty Act, which expired on June 30, 1931, and the Hemp Bounty Act, which expired on Dec. 31, 1932, is given on p. 662 of the 1934-35 Year Book.

§ The material relating to patents and copyrights has been revised by J. T. Mitchell, Commissioner of Patents, and that relating to Trade Marks by D. D. Ryan, Registrar of Trade Marks.

ively to the Parliament of Canada. The Dominion Patent Act of 1869 repealed the provincial Acts and has formed the basis of all succeeding legislation.

Letters patent are now issued subject to the provisions of c. 150, R.S.C., 1927, as consolidated in c. 32, 1935, and application for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa, Canada.

The growth of Canadian inventions\* is shown by the fact that the number of applications and total fees increased each year without a break from the beginning of the present century until the fiscal year 1913, when 8,681 applications were received and the total fees amounted to \$218,125. Since then progress has not been so rapid. Of the 7,578 patents granted in 1939, 5,220 or 69 p.c. were issued to United States inventors, 620 to Canadians, and 625 to residents of Great Britain and Ireland, while Germany with 449, Holland with 133, France with 124, Sweden with 75, and Switzerland with 73 followed in the number of inventors to whom patents were issued.

There were few outstanding developments in the fiscal year 1939, but continued activity and steady progress were indicated in all fields of invention, particularly in those of chemistry and metallurgy. One of the most important discoveries was the production of synthetic organic textile fibres from raw materials of the mineral kingdom, viz., coal, air, and water. Improvement of motor fuels was given considerable attention. Advances were made in the development of plastics and coating materials as well as of various synthetic materials.

In metallurgy the reduction of magnesium and the production of magnesium and aluminium alloys have been very active. The addition of lead to steel has produced alloys that facilitate machining operations at increased speed.

In the electrical field, television continues to be given much attention, as do air-conditioning and refrigeration.

## 20.—Patents Applied for, Granted, etc., in Canada, Fiscal Years 1934-39.

Fees received, net.....\$	362,146	353,460	386,542	377,453	367,127	365,672

**Copyrights.**—Registration of copyright is governed by c. 32, R.S.C., 1927, and applications for protection relating to copyrights should be addressed to the Commissioner of Patents, Ottawa.

The Copyright Act of 1921 (consolidated in c. 32, R.S.C., 1927) sets out in Sect. 4 the qualifications for a copyright, and in Sect. 5 its duration: "Copyrights shall subsist in Canada . . . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the (Berne) Convention and the additional Protocol . . . or resident within His Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death."

\* 'Invention' means any new and useful art, process, machine, manufacture, or composition of matter or any new and useful improvement in any art, process, machine, manufacture, or composition of matter.

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection throughout all parts of His Majesty's Dominions, foreign countries of the Copyright Union, and the United States of America, as well as in Canada.

**Trade Marks.**—The Trade Marks Office is charged with the administration of the Unfair Competition Act, 1932, which repealed all previous Acts governing trade marks, and the Shop Cards Registration Act that came into force on Sept. 1, 1938. Applications for trade mark protection should be addressed to the Registrar of Trade Marks, Ottawa, Canada.

A Register of Trade Marks is kept, in which, subject to the provisions of the Act, any person may cause to be recorded any trade mark he has adopted, and notification of any assignments, transmissions, disclaimers, and judgments relating to such trade mark. In order that the public may be kept informed in the matter of trade mark registrations, a list of marks registered each week appears in the Patent Office Record issued weekly. Holders of trade marks registered before the present Act came into force are protected by certain provisions. Registrations under the new Act must be renewed every fifteen years whereas under previous regulations renewals were made every twenty-five years.

The Shop Cards Registration Act is designed to afford a measure of protection to organizations, such as trade unions, that formerly were able to register their particular designations as Union Labels under the Trade Mark and Design Act. During the period Sept. 1, 1938, to Mar. 31, 1939, there were only two registrations of this kind.

#### 21.—Copyrights, Trade Marks, etc., Registered in Canada, Fiscal Years, 1934-39.

Item.	1934.	1935.	1936.	1937.	1938.	1939.
Copyrights registered.....No.	2,537	3,060	3,403	3,249	3,241	3,146
Trade marks registered.....“	2,066	1,686	1,574	2,068	2,169	1
Industrial designs registered.....“	331	430	363	336	544	356
Timber marks registered.....“	6	4	3	10	7	16
Assignments registered.....“	1,143	1,090	1,394	2,093	1,688	632 <sup>1</sup>
Fees received, net.....\$	67,196	72,217	68,220	86,396	85,023	13,381 <sup>1</sup>

<sup>1</sup> Since Apr. 1, 1938, the Trade Marks Office has been functioning as an entity separate from the Patent Office with which it had been associated previously. For the fiscal year 1939, trade marks registered numbered 2,181, assignments registered numbered 1,022, and net fees received amounted to \$62,711.

### Section 7.—Weights and Measures.\*

The object of weights and measures administration is to maintain uniformity and accuracy in the use of the legal standards of the country in industry and commerce.

What might be termed the principal Weights and Measures Act of Canada was passed in the session of 1872-73; its provisions closely followed English weights and measures law, but the system of weights and measures was greatly simplified. This Act established as the primary legal standards for Canada the imperial pound (but the short ton of 2,000 lbs.), the gallon, and the yard. The only exception to this was the continued use of the old French land measure, the arpent, in Quebec. The troy ounce of 480 grains and its decimal sub-multiples are the legal weights for the weighing of gold and precious metals. The metric system is legal for all transactions.

\* Revised by E. O. Way, Director of Weights and Measures, Department of Trade and Commerce.

Many changes, deletions, and additions have been made to the Act of 1873 by later legislation, but its principles remain unchanged. The latest legislation is the Weights and Measures Act (c. 212, R.S.C., 1927), as amended by c. 48, 1935.

Since 1918 the Service has been administered by the Department of Trade and Commerce. For purposes of administration, the Dominion is divided into 19 districts, each in charge of a district inspector. The chief rules of administration are as follows:—

- (1) Every new type of weighing and measuring device must be submitted to the Department at Ottawa for approval before being placed on the market.
- (2) Every new machine must be inspected and stamped by an inspector before being sold or taken into use.
- (3) Imported machines are held by the customs until release is approved by the nearest inspector.
- (4) All inspections take place on the traders' premises, except where devices are brought to the inspection offices.

The total revenue collected by the Service in the fiscal years 1938 and 1939 amounted to \$395,465 and \$418,015, respectively, while the expenses, including salaries, amounted to \$385,207 and \$424,161, respectively.

## Section 8.—Electricity and Gas Inspection.\*

The Electricity and Gas Inspection Branch of the Department of Trade and Commerce administers three Acts: the Electricity Inspection Act (c. 22, 1928), the Gas Inspection Act (c. 82, R.S.C., 1927), and the Electricity and Fluid Exportation Act (c. 54, R.S.C., 1927).

The Gas Inspection Service was inaugurated on July 1, 1875, and the Electricity Inspection Service in 1894, at which time these two Services were merged to form

\* Revised by J. L. Stiver, Director, Electricity and Gas Inspection Service, Department of Trade and Commerce.

the Electricity and Gas Inspection Services and constituted as a Branch of the Department of Inland Revenue.

For the purpose of administration, Canada is divided into 3 divisions and 20 districts: the total staff is 108. The nature of the work performed by these Services is entirely technical and comprises the control of all types of electricity meters and gas meters used throughout Canada, and the testing and stamping of every meter used for billing purposes; the object being to ensure the correct measurement of electricity and gas sold. Manufactured gas is also tested to determine its heating value wherever sold in Canada.

The latest report of the Branch shows 539,363 electricity and gas meters tested in the fiscal year 1939, as compared with 518,385 in the preceding year. The total revenue derived from electricity and gas inspection was \$360,378 as compared with an expenditure of \$254,710. The Branch also collected \$450,736 as export duty and licence fees under the provisions of the Electricity and Fluid Exportation Act; the cost of collecting this revenue was only \$216.

The administration of the Electricity and Fluid Exportation Act involves the receiving and consideration of applications to export electrical energy, natural gas, crude oil, etc., the issuing of licences therefor, the inspection and testing of meters to measure the commodity exported, and the collection of the export tax imposed. Other related statistics collected in the administration of the last-named Act will be found in the Power chapter of this volume, pp. 384-385.

### 23.—Electricity Meters in Use, Fiscal Years 1915-39.

## Section 9.—Merchandising and Service Establishments.\*

A comprehensive census of business carried on by trading and service establishments was undertaken for the first time in 1931 in connection with the Seventh Decennial Census. A partial survey of trading establishments had been made in 1924, but the results of this initial survey, while indicative of the extent of domestic trade, suffered from the incompleteness of the canvass made. The Census of Merchandising and Service Establishments, 1931, covered not only the operations of retail and wholesale merchandising establishments in 1930 but also those of service establishments, including hotels. In addition, information was collected to show the initial channels (manufacturers' wholesale branches, other wholesalers, retailers, industrial consumers, export sales, etc.) through which goods manufactured in Canada were distributed and the proportion of the total value of production sold through each channel. The results have been published in several series of reports and in Volumes X and XI of the Census of 1931.

**Annual Statistics.**—An outgrowth of the Census of Merchandising and Service Establishments, 1931, has been an annual survey of wholesale and retail trade based on reports from large concerns in the respective fields. In the case of wholesale trade, the annual survey is confined to wholesalers proper and reports are secured from firms that had a volume of sales of \$100,000 or more in 1930 together with firms of a similar size that have commenced business since 1930. The survey of retail trade is based on the reports of all chain stores and of independent stores with a turnover of \$20,000 or more in 1930. Reports are also secured from newly established independent stores. While the annual figures for merchandising are not based on such a comprehensive survey as that made in connection with the

\* Prepared by Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics. For a list of publications of this Branch, see Chapter XXIX, Section I, under "Internal Trade".

decennial census, they provide the most reliable indicators available of recent trends in merchandise trade as they cover more than two-thirds of the dollar volume of business.

**Monthly Statistics.**—Monthly indexes of retail sales, based on returns from department stores, chain stores, and a representative sample of independent firms, are now available for the period commencing January, 1929. A description of these indexes appears in Subsection 2 of this section. Monthly indexes of wholesale trade are also available, although for the shorter period beginning January, 1938.

### Subsection 1.—Wholesale and Other Bulk or Non-Retail Merchandising.

Under this heading there appears at pp. 670-672 of the 1934-35 Year Book a summary of trade in the wholesale field, as derived from the Census of Merchandising and Service Establishments, and tables showing, for 1930, bulk merchandising statistics by provinces, and by type of distributor. This is the latest material available on that basis.

**Wholesale Trade in Canada, 1930.**—Included in the figures for all wholesale establishments, shown by provinces in Table 26, are data for regular wholesale houses and also for agents, brokers, manufacturers' sales branches, and other specialized wholesale agencies. Wholesalers proper embrace only regular wholesale houses such as wholesale merchants, importers, and exporters. Approximately one-third of the annual business of all wholesale establishments in Canada is transacted by wholesalers proper. The proportion for Manitoba is much below the Dominion average. Concentration of the grain trade in the City of Winnipeg results in an exceptionally high figure for agents and brokers in that Province.

**Wholesale Trade by Cities.**—Figures of wholesale trade in cities of 20,000 or over are given at pp. 604-605 of the 1939 Year Book.

**Annual Wholesale Statistics.**—In constructing an annual index of wholesale sales, the chief objective has been to obtain the most representative measure of wholesale trade and particularly of the pre-retail business. This annual index is confined to wholesalers proper, who are for the most part wholesale merchants, importers, exporters, and supply and machinery distributors. From this group are excluded such distributors as agents and brokers, manufacturers' sales branches, and

other types of specialized distributors. However, in order to attain the above-mentioned objective of a representative measure of wholesale trade, it was later found to be necessary to make certain alterations in the classifications used in presenting the results of the Census of Merchandising and Service Establishments, 1931. These alterations are referred to at p. 612 of the 1937 Year Book.

The 1930 figures shown in Table 27 are those of the census, while those for the other years are estimates based on the results of fairly extensive annual surveys. Wholesale trade during 1938 fell off slightly from the preceding year, increases in the three Prairie Provinces being more than offset by declines in all other regions. Total sales for 1938 were down 4.2 p.c. from the 1937 figure but still almost 10 p.c. above the level of 1936. Almost all individual trades reported decreases, dealers in food, dry goods, hardware, lumber and building materials, metals and metal work, and waste materials suffering the greatest declines.

**Monthly Indexes of Wholesale Sales.**—Commencing with January, 1935, the Dominion Bureau of Statistics has published monthly indexes of wholesale sales\* based on returns submitted by approximately 200 wholesale firms comprising a representative sample of nine different lines of business. The base on which these indexes were first computed was that of average monthly sales in 1935 equalling 100; the results of the annual surveys of wholesale trade were then utilized in reducing the monthly indexes to the 1930 base in order that they should conform with other series. Since the monthly indexes are based upon a smaller coverage of sales than that secured for the annual census, these results cannot be expected to have the accuracy of the more exhaustive survey. The monthly indexes do, however, give a fair indication of current trends in wholesale trade.

\* See "Monthly Indexes of Wholesale Sales" published at the end of each month and obtainable on application to the Dominion Statistician, price \$1 per year or 10 cents per copy.

<sup>1</sup> Revised since the publication of the 1939 Year Book.

Dollar sales for those lines of business included in the monthly survey averaged 7.4 p.c. higher in 1939 than in 1938, heavy inventory buying on the part of the retail trades during the first two months of the War largely being responsible for this increase. Sales for the first eight months of 1939 were only 1.3 p.c. above the corresponding period in the preceding year. All regions and all kinds of business for which figures are available shared in the increase. Gains were greatest in the clothing and footwear trades, increases of 9.9 p.c. for dry goods, 10.7 p.c. for clothing, and 18.9 p.c. for footwear being reported.

### Subsection 2.—Retail Trade and Service Establishments.\*

As complete a review of the retail merchandising and service statistics as will appear in the Year Book from the Census of Merchandising and Service Establishments, 1931, is given at pp. 673-690, inclusive, of the 1934-35 Year Book. This

\* A review of retail trade for the period 1923-30 is given at pp. 637-639 of the 1936 Year Book. This was summarized from a special study report "A Decade of Retail Trade" published in bulletin form in 1935 by the Internal Trade Branch of the Dominion Bureau of Statistics.

<sup>1</sup> Revised since the publication of the 1939 Year Book.

review gives detailed analyses of such trade, annual net sales, and employees engaged, by provinces, business groups and kinds of business, and by manner of operation (i.e., independents, two-store multiples, three-store multiples, voluntary and other types of chains, etc.). Since these statistics will stand until the next census is taken, it has been considered unnecessary to reprint them in this edition of the Year Book. In this edition, therefore, the only table of the 1931 Census reprinted, and this merely in part, is that showing the retail trade by provinces, which appears now as Table 29.

**Annual Retail Statistics.**—As in the case of wholesale merchandising, annual statistics of retail sales are based on the complete census covering 1930, supplemented

## Merchandise Trade, 1930-38, by Provinces and Kinds of Business—concluded.

by an annual survey of all the more important retail establishments, such establishments having accounted for over two-thirds of the total value of sales in 1930. In Table 28, therefore, the figures for 1930 are the results of the comprehensive census, while the figures for later years are estimates calculated from the annual surveys.

It is impossible to measure accurately the effect of the general decline in prices as a factor in the decrease in the total sales from 1930 to 1933. It was probably the principal factor in the food and apparel groups. On the other hand, the prices of more durable goods have not declined so much as food prices, so that the greater reduction in sales of groups handling durable goods, is, no doubt, due much more to reduced volume.

Retail trade was relatively well maintained in 1938, dollar volume of business for the year standing only 2 p.c. below the 1937 level. Sales in Manitoba and Saskatchewan were practically unchanged in 1938 from the preceding year; Alberta sales increased by 6 p.c. while all other provinces reported decreases ranging from 0.8 p.c. in Quebec to 6.5 p.c. in New Brunswick.

**Retail Merchandise Trade by Cities.**—Data similar to those given in Table 29 for provinces are published for cities of 20,000 population or over at p. 609 of the 1939 Year Book.

**Chain Stores.**—During the past decade the chain store has come to occupy an important place in the field of distribution. The Dominion Bureau of Statistics classifies as chains all retail organizations (with the exception of departmental

concerns) operating four or more branches. The number of chains reported in any year thus depends not only on the appearance or disappearance of firms but also on the number of units operated. As a minimum of four stores is required before a firm is classified as a chain, the reduction in branches below this number automatically removes a firm from the chain store group.

Figures covering the operations of retail chains are available for all years since 1930. In that year chain store companies transacted 17.7 p.c. of the total retail trade of the country. The proportion of the total business transacted by chains has varied only slightly since that date; in 1938 the percentage was 17.2.

The variety store of to-day is a typical chain store development, approximately 90 p.c. of all variety store sales being made by chains. Chains also play an important part in the distribution of groceries, meats, shoes, clothing, and drugs.

A significant development in chain store operation in the food retailing field during recent years is the shift towards larger stores, the proportion of total food chain business transacted by stores with annual sales of \$100,000 or more almost doubling since 1934. In that year there were 152 chain units with annual sales of \$100,000 or more and these transacted 21.7 p.c. of the annual food chain business. In 1935 there were 164 stores in this category and these transacted 23.9 p.c. of the total chain business; in 1936 there were 180 large stores with 26.3 p.c. of the sales; in 1937 there were 225 stores with 32.7 p.c. of the total business, while 1938 witnessed a continuation of the same trend. In the last named year there were 263 stores each with annual sales of \$100,000 or more; these accounted for 39.1 p.c. of the total food chain business. This transition has naturally been accompanied by a reduction in the proportion of the total business transacted by the smaller stores. Stores with annual sales of between \$20,000 and \$100,000 transacted 71.3 p.c. of the total food chain business in 1934; in 1938 the proportion for the same range had declined to 56.3 p.c. Nevertheless, a considerable number of relatively small chain units are still in operation. There were 445 chain units, with annual sales of less than \$20,000, in operation in 1938. However, included in this were a considerable number of stores that were opened in the year under review and that had less than a twelve-month period on which to report.

**Retail Sales of New Motor Vehicles in Canada.\***—Statistics on new motor vehicle sales in Canada are collected monthly from Canadian manufacturers and assemblers, and from manufacturers in the United States of vehicles made for sale in this country. The number of units sold and the retail value of sales are both reported. The retail value is the price paid by an individual purchaser at the Canadian point of manufacture and includes sales and excise taxes, charges for standard accessories, dealers' commissions, etc. Freight charges from factory to place of purchase are excluded. Duty is included in the retail value of sales of imported cars.

The decline in the automotive trade that commenced in 1938 continued throughout the spring and summer months of 1939, sales for the first 8 months of the year<sup>r</sup> standing 11 p.c. below the corresponding period of 1938. Favourable comparison<sup>s</sup> in the last four months of the year served to offset part of the losses previously recorded with the result that the total number of new vehicles sold in 1939 was only 5.3 p.c. below the 1938 figure. Improved economic conditions in Saskatchewan are reflected in an increase of 56 p.c. in new motor vehicle sales in 1939 compared with 1938. Sales in British Columbia were unchanged while other provinces reported declines.

\* For statistics of numbers of motor vehicles registered in Canada and apparent consumption of motor vehicles, see pp. 665-666

**31.—Retail Sales of New Motor Vehicles in Canada, 1932-39, with Total Value for 1930.**

NOTE.—The first year for which details are available is 1932. The total value for 1930 was secured in connection with the Census of Merchandising and Service Establishments.

<sup>1</sup> Not available.

**Retail Sales of Used Motor Vehicles in Canada.\***—That the sale of a new motor vehicle in Canada means the sale by distributors of two used models is the opinion generally recognized in the automotive trade. The accuracy of this ratio is confirmed by the results of a special survey of the retail automotive trade for 1937 for which reports were secured direct from 3,426 retail distributors of motor vehicles in the country. Dealers and distributors reported a total of 413,043 motor vehicles sold for \$245,277,623 in 1937 of which 141,881† were new models which sold for \$157,671,890† or an average of \$1,111 each and 271,162 were used vehicles which retailed for \$87,605,733 or an average of \$323 each. The total number of vehicles sold is thus divided in the proportions 34.4 p.c. new and 65.6 p.c. used or, on the average, there were 1.91 used vehicles sold for every new model.

\* See footnote to p. 622.

† These figures are made up from returns from individual dealers for this special survey and do not agree with those given in Tables 31 and 32 obtained from manufacturers and assemblers.

The ratio of used to new vehicles sold varies considerably for different regions of the country, usually being higher in those sections in which the concentration of motor vehicles in proportion to population is greatest and lower in those sections in which there are fewer used vehicles available to be traded in as part payment for new models. The ratio of used to new models sold ranged from 1.53 in Quebec Province where the population per motor vehicle registration is highest to 2.16 in Ontario where the population per motor vehicle registration is lowest. A table showing sales of new and used motor vehicles in the different provinces for 1937 appears at p. 616 of the 1939 Year Book. Comparable figures for later years are not available.

**Financing of Motor Vehicle Sales in Canada.\***—Financing corporations play an important part in the retail distribution of both new and used motor vehicles in Canada. They extend credit facilities to customers who could not enter the market if required to pay with cash and to others who, though in a position to pay cash, find it more convenient to budget their expenditures on the instalment basis. They also provide a service to the motor dealers by assuming the risks and inconveniences connected with instalment sales, thus permitting the dealers to operate on a smaller capital outlay than would otherwise be necessary.

Statistics on financing are compiled monthly from returns secured from all large finance companies in Canada that are engaged in purchasing accounts, contracts, or notes arising out of retail sales of motor vehicles. Aggregates of the monthly data show that sales of 153,107 motor vehicles (including both new and used models) were financed to the extent of \$62,768,746 in 1939. These figures reveal decreases of 5.9 p.c. in number and 9.9 p.c. in amount from the 162,703 vehicles that were financed for \$69,685,853 in 1938. New vehicles numbering 37,320 were financed for \$27,852,627 or an average of \$746 each. There were also 115,787 used vehicles whose sales were financed to the extent of \$34,916,119 or for \$302 each.

In 1939, 32.5 p.c. of all new motor vehicles sales in Canada passed through the hands of financing corporations. The corresponding amount of financing amounted to 22.1 p.c. of the total selling value of all new models. Total sales of used vehicles are known only for 1937. In that year 44.9 p.c. of all used vehicle purchases were financed by these finance corporations.

\* See footnote to p. 622.

**Monthly Indexes of Retail Sales.**—In recent years the Dominion Bureau of Statistics has published monthly indexes of the dollar value of retail sales based upon reports received from department stores, from chain organizations, and from a number of independent firms operating in twelve lines of business. While these reports cover only a part of the field and relate mainly to the business of department and chain stores, they embrace a sufficiently large number of stores to provide a fairly accurate indication of the current movements in retail sales for the kinds of business that are included.

In the second set of figures shown at the right of Table 33, corrections are incorporated to allow for the variations in number of business days and for seasonal influences. This general index of retail sales shows that the low point in retail trade was reached in the early part of 1933. Following this there was a gradual improvement in the dollar volume of sales until December, 1937, when an exceptionally heavy Christmas business brought the seasonally adjusted index to the highest level recorded since the summer of 1931. Retail trade in Canada for the year 1938 was maintained at a level only slightly below that of 1937.

A downward trend in the first few months of 1939 was offset by increases in the spring and summer months, dollar sales for the first eight months of the year equalling the amount recorded for the corresponding period of 1938. A sudden increase in consumer purchasing on the outbreak of war is reflected in statistics for September when sales increased 24 p.c. from August and were 12 p.c. higher than in September, 1938. Increased demand was greatest for food and textile products. Grocery and meat stores did 15 p.c. more business in September, 1939, than in the same month of 1938; men's clothing store sales were up 17 p.c., and women's clothing stores, 15 p.c. Substantial gains over 1938 were also recorded in the last quarter of the year with the result that annual sales for 1939 stood 3.2 p.c. above the preceding twelve-month period.

### 33.—Index Numbers of Retail Sales, by Months, 1929, 1930, 1933, and 1936-39.

NOTE.—The general indexes are composite figures secured by weighting the indexes of sales for twelve kinds of business in proportion to their relative position in the total trade. The figures in this table have been revised since the publication of the 1939 Year Book.

(Average for 1930=100.)

**Motion Picture Statistics.**—The motion picture has become the most popular form of public entertainment and the business of satisfying the demand for such amusement has assumed a corresponding importance. In 1930 the expenditure

on motion picture entertainment (exclusive of amusement taxes) was \$3.77 per capita. By 1933, owing to reduced patronage and lower prices of tickets, the per capita expenditure had dropped to \$2.33, while for 1935 the figure rose slightly to \$2.50. Figures for later years are \$2.70 for 1936, \$2.93 for 1937, and \$3.02 for 1938.

Statistics for motion picture theatres in Canada were secured for the first time in connection with the Census of Merchandising and Service Establishments, 1931. According to the results of this Census, there were 910 motion picture theatres in operation in 1930. During the depression a number of theatres were closed so that in 1933 only 765 were reported. Since 1933 the situation has more than recovered itself, 797 theatres being reported in operation in 1934, 862 in 1935, 959 in 1936, 1,047 in 1937, and 1,133 in 1938. Principal statistics by leading cities for 1936 and 1937 are given at p. 621 of the 1939 Year Book.

### 34.—Motion Picture Theatres, Employees, Salaries and Wages, and Total Receipts, by Provinces, 1930, 1937, and 1938.

NOTE.—Figures for intervening years will be found in the corresponding table of previous editions of the Year Book.

<sup>1</sup> Does not include amusement taxes.

<sup>2</sup> Includes Yukon and Northwest Territories.

## Section 10.—Control and Sale of Alcoholic Liquors and Beverages in Canada.\*

During the years 1916 and 1917, as a war policy, legislation prohibiting the sale of alcoholic liquors, except for medicinal and scientific purposes, was passed in all the provinces except Quebec, where similar legislation was passed in 1919. The

\* Abridged from the report "The Control and Sale of Liquor in Canada", by Miss L. J. Beehler, M.A., published by the Dominion Bureau of Statistics.

prohibition extended to the sale of beer and wine except in Quebec. Native wine, however, could be sold in Ontario.

In aid of provincial legislation prohibiting or restricting the sale of intoxicating liquors, the Dominion Government, in 1916, passed a law making it an offence to send intoxicating liquors into any province to be dealt in contrary to the law of that province. In 1919 this Act was changed to read that "on the request of the Legislative Assembly of a province a vote would be taken on the question that the importation and the bringing of intoxicating liquors into such province be forbidden".

During 1921 Quebec and British Columbia discarded the existing prohibition laws and adopted the policy of liquor sale under government control. The same course was followed by Manitoba in 1923, Alberta in 1924, Saskatchewan in 1925, Ontario and New Brunswick in 1927, and Nova Scotia in 1930. Thus Prince Edward Island is the only province still adhering to a policy of prohibition.

The provincial Liquor Control Acts have been framed to establish provincial monopolies of the retail sale of alcoholic beverages, with the practical elimination of private profit therefrom. Partial exception is made in the retail sale of malt liquor by brewers, which certain provinces permit while reserving regulative rights and taxing such sales heavily. In all the provinces, however, spirits may be bought only at government liquor stores. The provincial monopoly extends only to the retail sale of alcoholic beverages, the manufacture being still in private hands but under the supervision of the Liquor Boards or Commissions. The original Liquor Control Acts have been modified from time to time as deemed advisable. Brief summaries of the legislation are given in the Bureau's annual report on the Control and Sale of Liquor.

**Sales by Liquor Control Boards.**—In connection with the figures on gross sales shown in Table 35 it is essential to note that for Quebec, Manitoba, and Alberta (prior to Apr. 1, 1936), the sales of beer made directly by the brewers to the licensees are not included. The proceeds from such sales do not pass through the Boards, but the purchasers must pay through the brewers to the Boards a tax equal to 5 p.c. of the purchases in the case of Quebec, and 12½ cents per gallon in Manitoba. In Alberta purchasers from the brewers paid a tax of 12½ cents per gallon prior to Apr. 1, 1932, and 15½ cents per gallon thereafter to Apr. 1, 1936.\*

It should be noted that the values, as given, do not represent the sales values to the final consumers as, in most provinces, the sale of beer by the glass is permissible. Further, all the liquor sold in any province is not consumed by the residents of that province. The tourist traffic is an important factor in this connection.

All the revenue resulting from the Liquor Control Acts is not paid to the Liquor Boards. In certain provinces, permit fees are paid directly to the Governments and do not pass through the Boards.

The reports of the Boards do not in all cases show the quantities of liquors sold; in comparing values for a series of years or between provinces it should be borne in mind that price variations may be an important factor.

**Apparent Consumption of Liquor in Canada.**—It is not possible to obtain accurate figures on Canadian consumption of liquor. Except in Nova Scotia, Quebec, Ontario, and Alberta, the Liquor Boards do not publish figures to show sales on a gallonage basis, and even were such data on quantity sales available for all provinces they would not necessarily represent total consumption. For example,

\* An amendment to the Alberta Liquor Control Act passed at the 1936 session of the Legislature provides that "brewers who manufacture beer in Alberta may sell only to the Liquor Board". All sales, both to beer licensees and to permit holders, are now made only through the Board. Under the new arrangement the gallonage tax is no longer levied.

the quantities consumed by tourists reach a considerable amount. Further, there is no definite information regarding the illegal traffic in liquor, though inquiry has revealed that such illicit business has at times reached fairly large proportions.

Obviously, figures of consumption are subject to error for the reasons mentioned above, and also because no consideration has been given to increases or decreases in the quantities held in stock by the Boards or by licensees.

*Spirits.*—Practically the total production of spirits is placed in bonded warehouses whence it is released for various purposes. The quantities shown as "entered for consumption" are released from warehouse, duty paid, presumably for consumption for beverage purposes in Canada. However, part of these may be exported.

*Malt Liquors.*—Only a small part of the output of malt liquors is placed in warehouses. The available supply is, therefore, made up of (1) production; (2) changes in warehouse stock; and (3) imports.

*Wines.*—The apparent consumption of native wines is obtained by dividing the rates of excise tax into the total tax collections. This is believed to furnish a better measure of consumption than the method formerly used (i.e., subtracting exports from production) since part of the product is not consumed in the year of production but is placed in storage for maturing.

**35.—Gross Sales and Net Profits of Liquor Control Boards, Additional Revenues Paid Direct to Governments, and Total Net Revenue from Liquor Control, 1936-38.**

Province.	Year.	Receipts by Liquor Control Boards or Commissions.			Additional Amounts for Permits, etc., Paid Direct to Provincial Governments.	Total Net Revenue from Liquor Control.

<sup>2</sup> In addition, sales of beer from breweries and brewers' warehouses totalled \$29,396,420 in 1936, \$31,621,194 in 1937, and \$26,289,136 in 1938. Sales of native wines made direct to customers from licensed native wine sales offices and, when permitted, from the winery premises, amounted to \$1,407,933 in 1936, \$1,660,637 in 1937, and \$1,886,530 in 1938.

<sup>4</sup> The beer taxes paid to the Boards in Manitoba and Alberta are tabulated below. Boards also pay the beer tax on their purchases from the brewers but the beer sales of the Boards are included in the total gross sales shown above.

Fiscal Year.	Manitoba.		Alberta.	
	Tax.	Accrued Tax.	Tax.

		SECTION 1. STATISTICS OF THE PRESS.....	740

Canada is a country of continental dimensions, nearly 4,000 miles in length from east to west, with its relatively small population of 11,315,000 (estimated population as at June 1, 1939), in the main thinly distributed along the southern strip of its vast area. Different parts of the country are shut off from each other by areas of rough, rocky, forest terrain, such as the region lying between New Brunswick and Quebec, the areas north of Lakes Huron and Superior, dividing the industrial region of Ontario and Quebec from the agricultural areas of the prairies, and the barriers interposed by the mountains of British Columbia. To such a country with a population so distributed and producing mainly for export, as do western agriculturists or, like manufacturers, largely for consumption in distant

portions of the country itself, cheap transportation is a necessity of life. Before 1850, when the water routes were the chief avenues of transportation and were closed by ice for several months each year, the business of the central portions of the country was reduced to a state of relative inactivity during the winter. The steam railway was required, therefore, for the adequate economic development of Canada, more particularly for linking up with the commercial and industrial world the vast productive areas of the Canadian West, and thus promoting their development. The construction of the Canadian Pacific Railway gave to Canada, as an economic unit, length; the building of the newer transcontinental railways has given the country breadth.

Railway transportation, though essential in a country such as Canada, is nevertheless expensive for bulky and weighty commodities, and also for short distances where the cost of repeated handling amounts to more than actual transportation. For bulky freight, new enterprises have been either undertaken or are under consideration for improving water communication, such as the new and deeper Welland Canal, the deepening of the St. Lawrence canals and of the channel between Montreal and Quebec, and the development of the Hudson Bay route. For freight movement over moderate distances the motor truck, operating over the growing network of improved highways, is providing an increasing proportion of the service. For inaccessible areas remote from the railways, the aeroplane has established itself commercially and is a valuable addition to other transportation facilities.

In order to appraise the value of each of these agencies of transportation from this viewpoint, this chapter of the Year Book, after treating of government control over agencies of transportation and communication in Part I, deals with the four main agencies, namely, carriers by rail, road, water, and air, in Parts II, III, IV, and V, respectively. In each Part the arrangement is intended to show: (1) the plant, equipment, and facilities available; (2) the cost to the Canadian people; and (3) the traffic carried or services performed, in so far as statistics are available for each agency. Unfortunately this arrangement brings out some rather serious gaps in the information at present available; these are pointed out in the respective Parts.

Scarcely less important, from the social and economic viewpoints, is the development of communications in a country so vast and with population centres so scattered. The Post Office has been a great though little-recognized factor in promoting solidarity among the people of different parts of the Dominion, and this same desirable object is now being further aided by the radio, while telegraphs and telephones have done much to annihilate distance—the rural telephone, in particular, having been of great social and economic benefit in country districts. The press, again, assisted by cheap telegraph and cable rates and by low second-class mail rates to all parts of the country, has been helpful in developing national sentiment. These means of communication are dealt with in Parts VI, VII, VIII, and IX.

## **PART I.—GOVERNMENTAL CONTROL OVER AGENCIES OF TRANSPORTATION AND COMMUNICATION.**

Problems of transportation, because they are of such vital importance in the economic life of Canada, occupy a large part of the time and thought of our Parliaments and public men. With the modern development of new forms, it is becoming increasingly important to realize that the several agencies of transportation—carriers by rail, road, water, and air—are, or should be, inter-related parts of an integral

whole. Each agency has its place in the efficient provision of necessary transportation in Canada. The problem, therefore, is to adjust the conditions under which each of these agencies operates so that the resulting movement of passengers and freight may be accomplished with the maximum of economic efficiency, that is, at the least possible cost commensurate with desired convenience. The recognition of this growing necessity for viewing the problems of transportation and related communications as parts of a co-ordinated whole is indicated by the organization of the Dominion Department of Transport. This Department was organized on Nov. 2, 1936, under authority of c. 34, 1936, unifying in one Department the control and supervision of railways, canals, harbours, marine and shipping, civil aviation, and radio. The Meteorological Service is also under the Department of Transport.

Private enterprises engaged in the transportation and communications business in Canada, have, in the past 50 years, shown the same tendency toward consolidation and amalgamation that has been evident elsewhere throughout the civilized world. The basic reason for such consolidation and amalgamation has been the fact that the business of transportation and communications is, generally speaking, a 'natural monopoly', i.e., a type of enterprise in which service can be more efficiently and economically rendered to the public where one or a few concerns control a particular type of service throughout the country. The outstanding example of these consolidations in Canada in our time is the concentration of control of the railways of the country in the hands of the Canadian Pacific Railway Company and the Canadian National Railways.

However, since such control brings with it elements of monopoly and possible overcharge that are distasteful to the public, it has been deemed advisable in Canada, as in other countries, to set up authorities controlling the rates to be charged and the other conditions on which services to the public are to be rendered by common carriers. This control eventually, so far as the railways within the jurisdiction of the Dominion Government were concerned, was placed in the hands of the Board of Railway Commissioners, now the Board of Transport Commissioners. From time to time the regulatory authority of the Commission was extended to a limited extent to other utilities. A brief summary of the history and functions of this body follows.

Besides the Board of Transport Commissioners, dealing with the larger public utilities coming under the jurisdiction of the Dominion Government, there exist, in several of the provinces, bodies that undertake among their duties the supervision and control of local public utilities operating under the jurisdiction of the provinces, and the regulation of their rates for service. Among these are the Ontario Department of Municipal Affairs (formerly the Railway and Municipal Board of Ontario, established in 1906), the Quebec Commission of Public Utilities established in 1909, the Nova Scotia Board of Commissioners of Public Utilities, and the Public Utilities Commission of Manitoba. In the three westernmost provinces these same duties are performed by provincial Departments of Railways.

### **The Board of Transport Commissioners for Canada.\***

In the early days of railway building in Canada, the provinces were more concerned with rapid development than with rate regulation. Under the Railway Clauses Consolidation Act of 1851, rates were fixed by the directors of the railway, subject to the approval of the Governor in Council. Beyond this, competition was

\* Revised by P. F. Baillargeon, Secretary, Board of Transport Commissioners for Canada.

relied upon to bring rates to a reasonable level. As time went on, however, those who believed in the efficacy of competition as a regulator were disillusioned. For example, complaints were made that the Grand Trunk gave low through-transit rates, say from Chicago to New York, through Canada, and recouped itself by high non-competitive rates in Upper Canada. In 1888, the supervision of rates was assigned to the Railway Committee of the Privy Council, sitting at Ottawa.

At the turn of the century, two reports were prepared for the Department of Railways and Canals by Prof. S. J. McLean, the first setting down the experience of railway commissions in England and the United States, and the second discussing Canadian rate grievances, with a recommendation that regulation by commission be adopted in Canada. The second report found that non-competitive rates were exorbitant as compared with competitive rates and that the railways had exercised their right to vary rates without notice, to the great distress of shippers. Among the weaknesses of the Railway Committee as a rate-regulating body was its fixed station at Ottawa, which made the cost of appearing before it practically prohibitive. Besides, Members of Parliament had no necessary aptitude for dealing with railway rates, and of their two functions—legislative and administrative—the legislative was to them the more important.

The Board of Railway Commissioners for Canada, as provided for by the amended Railway Act of 1903, was organized on Feb. 1, 1904. In the beginning, its membership consisted of a Chief Commissioner, a Deputy Chief, and one Commissioner. In 1908 the membership was increased by the inclusion of an Assistant Chief Commissioner and two other Commissioners. According to the Act, the Board might be divided into two sections of three members but, since any two constituted a quorum, two Commissioners usually heard all but the more important cases, and, agreeing, gave the decision of the Board. By the Transport Act (c. 53, 1938) the name of the Board was changed to the Board of Transport Commissioners for Canada and its powers were extended to cover transport by water and by air, as well as by rail. The new Board has the same number of members and form of organization as outlined above for the former Board.

With regard to transport by rail, the powers of the Board, in brief, cover matters relating to the location, construction, and operation of railways. The most important of these powers has to do with rate regulation. Passenger rates are divided into standard and special, freight rates into standard, special, and competitive. Standard rates are maximum rates and the only ones that must be approved by the Board before they are applied. Special and competitive rates, being less than maximum rates, may be applied by railways without the Board's approval, provided that a change of rates has been advertised. But important rate adjustments usually come to the notice of the Commission, for the changed rate alters the extent of the territory in which a shipper can compete and on this account he is apt to appeal the case to the Commission. It is a knotty problem to mark the boundaries of competitive areas—to decide whether Nova Scotian manufacturers should be given rates that would allow them to compete west of Montreal, or again, whether high construction and operation costs in British Columbia should enforce a rate that would prevent her goods from moving far into the prairies. By an amendment to the Railway Act, the regulation of telephone, telegraph, and express rates was given to the Commission, but with narrower powers than were given to it in dealing with railways. By the Transport Act, the Board now has the power also to issue licences to persons or concerns entitled to engage in transport by air on the air routes declared to be under its jurisdiction by the Governor in Council. Since Jan. 15,

1939, and following a proclamation of the Governor in Council to that effect, the Board has also the power to issue licences to ships engaged in the transportation of passengers or goods on the Great Lakes, as defined in Sect. 2, subsection 1 (f), of the Transport Act, 1938.

The procedure of the Board is informal, as suits the nature of its work, for experience has shown that hearings in strict legal form lead the parties to the argument to take uncompromising attitudes. If possible, matters are settled by recommendations to the carrier or the shipper; thus, during 1938, 97.41 p.c. of the applications to the Board were settled without formal hearing. The Railway Committee had kept its station at Ottawa, giving only formal hearings, and so the grievances of those who could not afford to appear in person or pay counsel went unredressed. The itineraries of the Transport Commission are arranged so that evidence may be taken at the least expense to those giving it.

The Chief or Assistant Chief Commissioner, depending upon which one is presiding, gives final judgment on points of law when, in the opinion of the Commissioners, the question is one of law. On questions of fact the findings of the Board are final and are not qualified by previous judgments of any other court. Questions of law and jurisdiction are differentiated. In the first case, the Board may, if it wishes, allow an appeal to the Supreme Court; in the second, the applicant needs no permission to present his appeal.

The Railway Committee of the Privy Council, being a Committee of the Cabinet, was responsible to Parliament. When the powers of the Committee were made over to the Railway Commission (now the Board of Transport Commissioners) the responsibility was retained, but necessarily by a different means. There is now provision for an appeal from any decision to the Governor General in Council, who may also of his own motion rescind or vary the action of the Board, but the power to rescind or vary usually consists in referring to the Board for reconsideration. From its inception until Dec. 31, 1938, the Board gave formal hearing to 10,545 cases. Its decision was appealed in 121 cases, and 6 cases were referred for the opinion of the Supreme Court of Canada, 78 of these, including the above references, being to the Supreme Court of Canada and 49 to the Governor General in Council. Of the appeals, 13 of those carried to the Supreme Court and 3 of those to the Governor General in Council were allowed.

## PART II.—RAILWAYS.

The treatment of rail transportation is divided into three sections dealing, respectively, with steam railways, electric railways, and express companies.

### Section 1.—Steam Railways.\*

The steam railway is still the most important transportation agency from the standpoint of investment and of traffic handled. Fortunately, the statistical field is more completely covered for this form of transportation than for any other, since there are fairly complete figures dealing with steam railway mileage, equipment, finances, and traffic.

**Historical Sketch.**—Construction was begun on the first Canadian railway in 1835. This was a line only 16 miles long between Laprairie and St. Johns, Que., intended to expedite the journey between Montreal and New York. It was officially opened July 21, 1836, the motive power being the steam locomotive "Dorchester",

\* Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch publishes an "Annual Report on Steam Railways", as well as numerous other reports, a list of which is given in Chapter XXIX of this volume. Certain of the financial statistics of steam railways are compiled with the co-operation of officers of the Department of Transport.

built by Stephenson of Liverpool. About the same time, a line 6 miles long was built in Nova Scotia from Stellarton to a loading point on Pictou Harbour to haul coal from the mines to vessels. On this line the motive power was at first provided by horses, but in the spring of 1839 the "Samson", a locomotive built in England, brought over in a sailing vessel and still preserved in Halifax, was put into operation. A railway from Montreal to Lachine was opened in 1847 and another line to St. Hyacinthe in 1848. In 1850, however, there were only 66 miles of railway in Canada.

*Commencement of the Railway Era—The Grand Trunk.*—The railway era in Canada may be said to have begun in 1851, when charters were granted providing for the construction of a main line of railway between the two Canadas. These charters were repealed when the Grand Trunk charter was granted in 1852. The result was the completion of the Grand Trunk Railway between Montreal and Toronto in 1856, its extension westward to Sarnia in 1859, and eastward to Rivière du Loup in 1860. The Atlantic and St. Lawrence Railway, to Portland, Maine, was leased in 1853 and in 1859, on the completion of the Victoria Bridge across the St. Lawrence at Montreal, the Grand Trunk had a through route 800 miles long from Portland to Sarnia. Within the next thirty years many important railways of Ontario, including the Great Western, were acquired and the Grand Trunk lines were extended to Chicago.

*Construction of the Intercolonial.*—An intercolonial railway linking Nova Scotia and New Brunswick with Upper and Lower Canada had been proposed as early as the 1830's. In 1844 the Imperial Government made a survey for a military road, and in 1851 agreed to recommend to Parliament either a guarantee of interest or an advance of the sum required to build a railroad. Differences of opinion as to the route resulted in the project being dropped, but in 1853 Nova Scotia undertook to construct, by 1862, a trunk line from Halifax to the New Brunswick frontier, with branch lines to Pictou and Victoria Beach. In both Nova Scotia and New Brunswick, however, the scheme of an intercolonial railway broke down for lack of funds, and in 1867 there were only 374 miles of railway in the Maritimes. These, under the B.N.A. Act, passed to the Dominion Government. The latter undertook the completion of the railway, and in 1876 the line was opened to Rivière du Loup. Later on, by acquisition of, lease of, or running rights over other lines, the Intercolonial was extended to Montreal.

*The First Transcontinental Railway—The C.P.R.*—As early as 1849 a pamphlet published by Major Carmichael-Smyth advocated the construction of a railway to the Pacific along a route approximating that later taken by the Canadian Pacific Railway. In 1851 a Parliamentary Committee reported against the enterprise at that time. In 1871 the terms under which British Columbia entered Confederation bound the Dominion to commence the Pacific railway within two years and complete it within ten years. The building of the railway as a public work actually commenced in 1874, but was not very rapidly pushed forward. In 1880 the Government entered into a contract with the Canadian Pacific Railway syndicate, granting to the syndicate all portions of the line completed or under construction, a cash subsidy of \$25,000,000, a land grant of 25,000,000 acres, free admission of materials for construction, and protection for 20 years against competing lines. The Company on its side agreed to complete the railway to a fixed standard by May 1, 1891, and thereafter to maintain it efficiently: the last spike on the main line was driven on Nov. 7, 1885. Like the Grand Trunk, the Canadian Pacific Railway began to acquire branch lines as feeders in the settled parts of the country along its route.

*The Second Transcontinental—The Grand Trunk Pacific.*—About the end of the century the Grand Trunk, which already had a line as far west as Chicago,

submitted to the Canadian Government a proposal whereby it might participate in the settlement and development of the West. Lines were to be leased from Chicago via Minneapolis to Winnipeg, and thence a new line, subsidized by the Government, would be built to the Pacific Coast. The Government raised objections to so much of the line lying in the United States and a second proposal was made for a connecting line with larger subsidies from North Bay to Winnipeg. The Government submitted, in 1903, a counter proposal that the line, instead of terminating at North Bay, should be continued east to Moncton, New Brunswick, the eastern section from Moncton to Winnipeg to be constructed by the Government and leased to the Grand Trunk Pacific for a 50-year period, the railway paying no rent for the first seven years and 3 p.c. on the cost of the railway for the remaining 43 years. The western half of the railway from Winnipeg to Prince Rupert was to be built by the Grand Trunk Pacific, the Government guaranteeing interest on bonds to 75 p.c. of the cost of construction, not exceeding \$13,000 per mile on the prairie section and \$30,000 per mile on the mountain section. The Grand Trunk reluctantly accepted this proposition and construction of the National Transcontinental and Grand Trunk Pacific commenced.

*The Third Transcontinental—The Canadian Northern Railway.*—The third transcontinental railway, the Canadian Northern, was begun in 1896 with the completion by Mackenzie and Mann of the 125-mile line of the Lake Manitoba Railway and Canal Co., chartered in 1889. The charters of the Winnipeg and Hudson Bay; the Manitoba and Southeastern; the Ontario and Rainy River; and the Port Arthur, Duluth, and Western were next acquired. Assisted by the Manitoba Government, which desired to establish competition with the Canadian Pacific Railway, the Canadian Northern then secured the Manitoba lines of the Northern Pacific and in 1902 completed its line from Winnipeg to Port Arthur. During the following decade, the agricultural west was filling up very rapidly and, with the public of Canada under the influence of this boom, the Canadian Northern Railway was able to secure guarantees of bonds from the Dominion and Provincial Governments to enable it to extend its lines both westward to Vancouver and eastward to Montreal and so complete the great scheme of a transcontinental road.

*Effect of the War of 1914-18 on Railways—The Drayton-Acworth Report.*—With two new transcontinental main lines, with branches, under construction, Canadian railway mileage was doubled between 1900 and 1915, increasing from 17,657 miles in the former year to 34,882 miles in the latter. The builders of the new lines, as well as the Canadian Government and people, had expected that immigration of capital and labour from Europe would rapidly settle the areas tributary to the new railroads and furnish abundant and lucrative traffic, as had been the case with the C.P.R. Instead, when war broke out in 1914, European labour and capital were conscripted for the struggle; immigration fell off and the anticipated traffic did not develop. On the other hand, the interest on the bonds had to be met, and in 1915 the Government felt it necessary to give assistance to the railways. In 1916, after loans had again been made to the Grand Trunk Pacific Railway and the Canadian Northern Railway Co., a Royal Commission was appointed by Order in Council of July 13, 1916, to investigate: (1) the general problem of transportation; (2) the status of each of the three transcontinental systems; (3) the reorganization of any of the said systems, or their acquisition by the State; and (4) other matters considered by the Commission to be relevant to the general scope of the inquiry. The majority report of the Commission, signed by Sir Henry Drayton and Mr. Acworth, has formed the basis of the subsequent railway policy of Canada. Their recommendation was that the public should take control of the Canadian Northern, of the Grand Trunk

Pacific, and the Grand Trunk proper, and that they should be administered on purely business principles by a board of trustees, such compensation as seemed proper to be decided by arbitration and given to the shareholders of the Canadian Northern and the Grand Trunk.

The process of the acquisition of these railways and the financial results of their operation down to the end of 1938 are described in the latter part of Subsection 2, pp. 645-651.

*The Royal Commission of 1931.*—During 1930 and 1931 both freight and passenger traffic declined until new low records were being established each succeeding month. Freight and passenger revenues consequently decreased at alarming rates and with increased capital expenditures and fixed charges, the financial condition of Canadian railways demanded readjustment. To study the situation and, if possible, to remedy it, the Government appointed a Royal Commission which, on Sept. 13, 1932, submitted its report, summarized at pp. 648-650 of the 1933 Year Book. During the following session of the Dominion Parliament, legislation known as the Canadian National-Canadian Pacific Act (c. 33, 1933) was passed. A summary of this legislation is given at p. 655 of the 1936 Year Book.

### Subsection 1.—Mileage and Equipment.

The first great period of construction (as shown in Table 1) was in the 1850's, when the mileage grew from 66 to 2,065. A lull in the 1860's, was followed by the second in the 1870's and 1880's; the third great period of construction was between 1900 and 1917.

<sup>1</sup> First railway construction begun but line not open for traffic until 1836. and previous years.

<sup>2</sup> As at June 30 for this and later years.

<sup>3</sup> As at Dec. 31 for this and later years.

In total railway mileage Canada now ranks fourth with 42,742 miles, the United States, Soviet Russia, and British India being the only countries with greater total mileages. In miles per capita only Australia has a greater average, the figure for Canada being one mile of line for each 267 persons (exclusive of 339 miles, chiefly main lines, of Canadian railways crossing over United States territory).

Construction has been most active in Manitoba, Saskatchewan, and Alberta during the period 1929-38, while there has been a tendency for mileages to decline slightly in the other provinces, because of the abandonment of unprofitable lines.

1 auto-railer.

<sup>2</sup> Includes 3 auto-railers.

<sup>3</sup> Includes

### Subsection 2.—Finances of Steam Railways.

The tables in this subsection deal with the capital liability, capital invested, earnings, operating expenses, employees and their earnings, and governmental aid to steam railways. However, the presentation of the financial statistics of railways in Canada would not be complete without some detailed consideration of the finances of the Government-owned railways. This is given in the latter part of the subsection. Some further statistics of revenue are included in Table 19, where they are shown in relation to traffic.

**Capital Liability.**—The great increase after 1922 in the capital liability of the steam railways of Canada is due to the inclusion of all Government loans to railways and investment in road and equipment of Government railways as part of the capital liability of the railways. The reduction in 1937, due to the Canadian National Capital Revision Act (c. 22, 1937), is explained at p. 644 of the 1939 Year Book.

### 4.—Capital Liability of Steam Railways, 1901-38.

NOTE.—Corresponding figures for each year from 1876 to 1900, inclusive, are given at p. 649 of the 1927-28 Year Book.

<sup>1</sup> Not reported. <sup>2</sup> Includes 26-18 miles of joint track. Canadian lines only for Canadian National, but Canadian and U.S. lines for Canadian Pacific. <sup>3</sup> Capital of lines in Canada and U.S. including capital of leased lines. <sup>4</sup> Included with Canada Southern Rly. <sup>5</sup> Constructed and operated by Ontario Government Railway Commission. <sup>6</sup> Includes \$201,987,338 Canadian railway capital owned by Canadian railways.

**Capital Investment.**—The capital structure of the Canadian National Railways, changed by the Capital Revision Act, 1937, was reduced by \$262,770,972. This Act is explained at p. 644 of the 1939 Year Book. The excess of capital liability as shown in Table 4 over the investments shown in Table 6 is accounted for by loans and advances from the Government to cover deficits of the Canadian National Railways and by the fact that some railway stock issues represented little actual investment in physical property. The investment account in recent years has been affected by write-offs for lines abandoned, transfers of property to other Government departments, etc.

**Earnings and Expenses.**—The operating ratio, or ratio of expenses to revenues, of Canadian railways increased from around 70 p.c. to above 90 p.c., between 1918-20, and remained high thereafter. The United States Government took over the operation of the United States railways and increased the rates of pay of the railway employees, when that country entered the War of 1914-18. The Canadian

railways were also obliged to make corresponding increases and these have been the chief factor in increased operating ratio. Declining revenues without corresponding reductions in expenses during the past five years have also maintained the high ratio.

**Railway Salaries and Wages.**—The Canadian National Railways brought into their accounts in 1928 the wages and salaries of commercial telegraph employees; these are added for 1926 and 1927 in Table 9 to make the data comparable. Because of inability of the railways to supply strictly comparable data for previous years, the numbers of employees and wages have been omitted for such, but index numbers have been computed for 1912-38 on as nearly comparable bases as possible, using 1926 data as equal to 100. The number of employees fluctuates with the volume of traffic, but not to the same extent. Salaries and wages are affected by the number of employees, rates of pay, and by the time worked. The rapid increase in the average wage in 1918 and 1919 was due to large increases in rates of pay corresponding to the "McAdoo Award" in the United States, and the fluctuations in 1932-38 were the results of reductions and restorations in basic rates of pay.

## 9.—Steam Railway Employees, Totals and Averages of Salaries and Wages, and Ratio of Salaries and Wages to Operating Revenues and Expenses, 1912-38.

<sup>1</sup> Ratio of salaries and wages chargeable partly to capital prior to 1926 but to operating expenses only for 1926 and subsequent years. <sup>2</sup> Years ended June 30 for this and previous years. <sup>3</sup> Owing to the inability of the railways to supply strictly comparable data for the years prior to 1926, statistics of employees and wages, which are given at p. 664 of the 1936 Year Book, have been omitted here; the adjusted index numbers express the relation with later years as closely as it can be approximated.

<sup>4</sup> Years ended Dec. 31 for this and later years. <sup>5</sup> Revised since the publication of the 1939 Year Book.

**Government Aid to Railways.**—In order that the private railways of Canada might be constructed in advance of settlement, as colonization roads, or through thinly settled districts where little traffic was available, it was necessary for Dominion and Provincial Governments and even the municipalities to extend some form of assistance. The form of aid was generally a bonus of a fixed amount per mile of railway constructed and, in the early days, grants of land other than for right-of-way were also made.

As the country developed, the objections to the land-grant method became more apparent, and aid was more frequently given in the form of a cash subsidy per mile of line, a loan, or a subscription to the shares of the railway. Guarantees of debenture issues were given in a later period and, since the formation of the Canadian National Railways, all debenture issues of that system, except those for rolling-stock, have been guaranteed by the Dominion Government.

**Canadian Government Railways.**—The Intercolonial Railway, built as a condition of Confederation and completed in 1876, and the Prince Edward Island Railway, opened in April, 1875, have, since their construction, been owned and operated by the Dominion Government. In 1903 the Dominion Government undertook the construction of the National Transcontinental railway line from Moncton, N.B., to Winnipeg, Man., to be leased to the Grand Trunk Pacific Railway Co. for a period of 50 years. However, during the War of 1914-18 the company was unable to take over the operation of the road when completed in 1915. The Government itself undertook its operation and was also obliged to lease the Lake Superior branch of the Grand Trunk Pacific Railway, which was isolated from the main line. A number of eastern branch lines have been acquired in recent years. The Hudson Bay Railway is a direct liability of the Dominion Government and has been operated by the Canadian National for the Government since Apr. 1, 1935, but is not included in the data for Canadian National Railways. To Mar. 31, 1939, the total cost of this railway was \$34,673,654,\* exclusive of the expenditure of \$6,274,150 on the terminal

\* Includes deficits from operations during construction.

at Nelson. The terminals at Churchill were transferred in 1937 to the National Harbours Board. The investment to Dec. 31, 1939, was \$13,198,491\* and the operating deficit for 1939 was \$46,407.

The major portion of Dominion Government investments in railways was construction costs of the Intercolonial system, the National Transcontinental Railway, and the Hudson Bay Railway, and the purchase price of small railways in the eastern provinces. The terminals at Churchill consisting of a grain elevator, warehouse, and docks have been transferred to the National Harbours Board and the investment removed from the railway account. Loans and advances to the Canadian National Railways for payment of operating deficits were charged to the Consolidated Revenue Account of the Dominion and also cleared from the railway account and other adjustments were made under the Canadian National Railways Capital Revision Act, 1937.

In addition to these expenditures the Dominion Government has made loans to the Canadian National and Canadian Pacific Railway companies for capital purposes, for special works programs, and for equipment leased to the railways; the amounts outstanding on Mar. 31, 1939, were: Canadian National Railways, \$24,765,053; Canadian Pacific Railway, \$6,251,282; total, \$31,016,335.

\* Includes deficits from operations during construction.

**The Consolidation and Organization of the Canadian National System.\***—In pursuance of an Act of 1917 (7-8 Geo. V, c. 24), the Government acquired the capital stock of the Canadian Northern Railways with a mileage of 9,566.5. The insolvency of the Grand Trunk Pacific led to the appointment of the Minister of Railways as receiver on Mar. 9, 1919, and in October, 1920, the road was transferred to the Canadian National Railways. The Grand Trunk Railway was acquired under c. 13 of the Statutes of the second session of 1919, providing for arbitration of the consideration to be given to its shareholders. This arbitration finally disposed of, steps were taken to consolidate the various railways under government operation and control. In October, 1922, the Grand Trunk Board and the Canadian Northern Board gave place to a single Canadian National Board, to which the former Canadian Government Railways were turned over for management and operation. The unification of the Grand Trunk and Canadian National Railways was provided for by Order in Council of Jan. 30, 1923, which also brought into effect the Act to incorporate the Canadian National Railway Co. and respecting Canadian National Railways (c. 13, 1919).

**Operating Finances of the Canadian National Railways.†**—Gross revenues, operating expenses, and net revenues include only those from steam railway and commercial telegraph operations, but the deficits are for the entire system, including the operating results of the Niagara, St. Catharines and Toronto Railway (electric) and other railways operated separately, hotels, commercial telegraphs, coastal steamships and all other outside operations.

Under the Canadian National Railways Capital Revision Act (c. 22, 1937), interest on Dominion Government loans, amounting to \$530,832,598, and Government claims for interest, amounting to \$43,949,039, were cancelled as liabilities of the Railway and these have been eliminated from Table 15.

\*For further details of the acquisition of the Canadian Northern, Grand Trunk Pacific, and Grand Trunk Railways by the Dominion Government, see pp. 602-603 of the 1926 Year Book.

† For detailed statistics of the operation and finances of the Canadian National Railways during 1938. see "Steam Railway Statistics, 1938", and "Canadian National Railways, 1923-38", published by the Dominion Bureau of Statistics, also the "Annual Report of the Canadian National Railways".

### 15.—Gross Revenues, Operating Expenses, Net Revenues, Fixed Charges, and Deficits of the Canadian National Railways,<sup>1</sup> 1923-38.

NOTE.—Appropriations, etc., for the Hudson Bay Railway were not included with the 1926 and later data as, although the railway was returned to the Government while under construction, it is not now a part of the Canadian National Railways.

<sup>1</sup> Includes the Central Vermont Railway, Inc., from Feb. 1, 1930. <sup>2</sup> Include Canadian Northern system, the Grand Trunk Railway of Canada, the Grand Trunk Pacific, and the Canadian Government Railways. <sup>3</sup> Include the New England Line, the Grand Trunk Western, the Duluth, Winnipeg and Pacific, and, from Feb. 1, 1930, the Central Vermont. <sup>4</sup> Net income deficit includes appropriations for insurance fund of \$9,840,672 and excludes interest on Government loans eliminated by Capital Revision Act, 1937. <sup>5</sup> Charged to "Proprietor's Equity". <sup>6</sup> Contributed by Dominion Government.

**Capital Revision of the Canadian National Railways.**—The Canadian National Railways Capital Revision Act, c. 22 of the Statutes of 1937, is dealt with at p. 644 of the 1939 Year Book. In the same edition, a table at pp. 644-645 shows a condensed consolidated balance sheet as at Dec. 31, 1936, adjustments authorized by the Capital Revision Act, and the revised balance sheet as at Jan. 1, 1937.

**Capital Structure and Debt of Canadian National Railways.**—The Capital Revision Act eliminated the profit and loss balance as at Jan. 1, 1937, and profit and loss balances for 1937 and future years will also be eliminated by charging to "Dominion Government—Proprietor's Equity" the losses due to abandonment of lines and other such items that do not involve the payment of cash at the time the items are written down, and by the Government contributing cash for the cash deficits. These cash deficits, shown in the last column of Table 15, have been met by loans by the Government, by direct payment from July 1, 1927, and by reduction of working capital.

The share capital on Dec. 31, 1922, consisted of \$165,627,739 stock of the Grand Trunk Railway held by the Dominion Government and \$100,000,600 of the Canadian Northern Railway stock also held by the Dominion Government. There was also outstanding \$4,591,975 stock of constituent lines held by the public, of which \$8,175 has been retired. Table 16 shows the adjustments of the capital liabilities of the system made effective Jan. 1, 1937, under the Capital Revision Act.

## 16.—Capital Structure and Debt of the Canadian National Railways, as at Dec. 31, 1922-38.

<sup>1</sup> Include temporary Government loans shown in annual reports as "Loans and Bills Payable—Minister of Finance". Other loans and bills payable are included in column "Change in Working Capital, ...".

<sup>2</sup> Exclude credits for property transferred to other Government departments—\$42,846,400.

<sup>3</sup> Include deficits for Eastern Lines from July 1, 1927, and for entire system from Jan. 1, 1932. <sup>4</sup> System (less Eastern Lines) deficit for 1932 of \$53,422,662 was paid in 1933, the remaining \$783,220 being secured from working capital.

<sup>5</sup> See last column of Table 15.

Table 18 has been compiled to reconcile the investments in and loans to the Canadian National Railways (including Canadian Government Railways) as shown in the Public Accounts for the fiscal year ended Mar. 31, 1939, with the debt to the Dominion Government shown in the Railways' balance sheet at Dec. 31, 1938, which is covered by the columns "Dominion Government—Proprietor's Equity", "Active Assets in Public Accounts", and "Appropriations for Canadian Government Railways" in Table 16.

**Subsection 3.—Steam Railway Traffic.**

In addition to an analysis of passenger and freight traffic statistics for all steam railways, a separate analysis is given of the operations and traffic of the Canadian National Railways, since, being controlled by the Dominion Government, the information is considered of special interest.

**Passenger and Freight Traffic.**—The greatest volume of passenger traffic, indicated by the number of passengers carried one mile, was reached in 1919 and the greatest volume of freight traffic in 1928. In recent years both freight and passenger traffic, especially the latter, have been affected by the increase in the use of motor vehicles and this traffic decrease was much aggravated by the general decline in commercial activity after 1929, but improvements took place in 1934, 1935, 1936, and 1937. In 1938 there was a slight decrease from 1937 figures.

The average haul for freight, as shown in Table 19, is for all railways, which eliminates the effects of consolidations of railways and of interchanging freight between Canadian railways. The average revenue per passenger increased in 1918 and 1919 with increases in rates, but the increases between 1924 and 1930 were due largely to decreases in the short-haul traffic. The increases in freight-train loading and train revenues have been due to the use of larger and more powerful locomotives.

# 19.—Summary Analysis of Statistics of Passenger and Freight Services and Receipts, 1929-38.

NOTE.—Corresponding figures for 1910-15 are given at pp. 628-629 of the 1922-23 Year Book, and for the years 1916-28 at pp. 652-653 of the 1937 Year Book.

<sup>3</sup> Includes caboose

miles. <sup>4</sup> Duplication eliminated, see Table 21 for details of freight carried.

<sup>5</sup> Revised classification includes mileage previously classed as "mixed".

**Mileage and Traffic of the Canadian National Railways.**—At Dec. 31, 1938, steam mileage of the Canadian National (including lines in the U.S.A. but exclusive of the Northern Alberta Railways and Toronto Terminals Railway, which are controlled jointly by the Canadian National and the Canadian Pacific Railways) was 23,789. Including the Thousand Islands Railway, 4·51 miles, and the Muskegon Railway and Navigation Co., 5·25 miles, controlled but separately operated, the total steam mileage was 23,799. Including 120·43 miles of electric lines, the grand total was 23,919.

*The Maritime Freight Rates Act (17 Geo. V, c. 44).*—This Act, effective July 1, 1927, ordered that the accounts of the Canadian National lines east of Lévis and Diamond Junction, Quebec, be separated from the remainder of the Canadian National system. These lines were designated the "Eastern Lines" of the Canadian National Railways. The Act ordered that specified freight rates on the Eastern Lines be reduced by 20 p.c. Other railways were allowed to make similar reductions in their freight rates in that territory and to bill on the Board of Railway Commissioners of Canada for the difference in freight receipts due to such reductions. The differences between the reduced rates and the normal rates are treated as revenues by the Canadian National Railways and paid by the Dominion Government. The totals paid to all railways under the Act were: \$1,353,464, \$2,758,893, \$3,092,677, \$3,615,218, \$2,554,673, \$1,922,073, \$1,989,130, \$2,529,394, \$2,348,399, \$2,505,823, \$3,182,458, and \$2,582,897, respectively, for the fiscal years 1927-38, a total of \$30,435,101.

The Quebec Bridge across the St. Lawrence above Quebec City, with a main span of 1,800 ft., carrying a single-track railway and accommodation for motor and pedestrian traffic, forms a connecting link in the Canadian National Railways system and is operated as a part of it.

**Railway Accidents.**—All injuries to passengers are included in Tables 22 and 23, but, for employees, only injuries that keep the employee from his work for at least three days during the ten days following the accident are recorded. Other persons include trespassers walking along tracks, stealing rides, etc., also persons crossing tracks at level crossings.

These accidents include all accidents in which railway trains were involved and accidents on railway property. The classification of accidents used in the Bureau's vital statistics treats collisions between motor vehicles and trains as motor-vehicle accidents; also provincial statistics of motor-vehicle accidents class them as motor-vehicle accidents and consequently adjustments should be made when compiling total accidental deaths of all kinds or comparing results of accidents of different kinds, such as train and motor vehicle.

## Section 2.—Electric Railways.\*

The cheap and reasonably rapid conveyance of human beings is a necessity of modern urban life. One important means by which this necessity is supplied throughout Canada is the electric street railway, operated by hydro-electric energy in the majority of cases.

**Historical.**—Replacing the horse-car systems, used in Montreal and Toronto as early as 1861, electric street railways were first seen in operation in Canada in 1885, when a successful experimental railway was constructed and operated at the Toronto Exhibition Grounds. Before many years their safety and convenience resulted in the discarding of the older systems. The first electric railway line in Canada and probably the first in North America, which ran between Windsor and Walkerville, was established early in June, 1886 (it is recorded that it was in active operation before June 11). An electric system 7 miles in length was opened at St. Catharines in 1887, using the double overhead trolley. The third electric railway in the Dominion was established in Victoria on Feb. 23, 1890, and the fourth commenced operation in Vancouver in June, 1890. These were followed by the completion of the Ottawa Electric Railway in 1891 and the electrification of the Montreal and Toronto systems in 1892. The street railways of other eastern cities were generally electrified during the 1890's, while in the newer western cities electricity was used from the commencement. In the cities of Eastern Canada, electric street railways are generally operated by private companies under city franchises, while in a considerable number of cities in Ontario and the West the street railways are owned and operated by the municipalities.

Many difficulties are met in operating the cars during the winter season, owing to the heavy falls of snow. This, however, has been overcome by the use of sweepers, scrapers, and ploughs. The single overhead trolley system has been found the most suitable and is in general use. During the past few years an increasing number of motor buses have been used; in 1924 only 48 were operated, but by 1938 the number had increased to 760. In 1936 the Montreal system secured 7 trackless trolley buses. These cars have pneumatic tires, require no track but use a second trolley wire instead of the steel rail for the return of the electric current.

In addition to street railways in the cities there are several systems serving suburban areas and also doing an inter-urban business, but this latter class of service is fast being supplanted by bus service. Indeed the development of motor vehicles,

\* Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch publishes an annual report on "Electric Railways in Canada".

while providing competition for all forms of rail transportation, has affected electric railways more seriously than steam railways. The dependence of the former upon short-distance passenger traffic renders them particularly susceptible to the competition of motor vehicles. Since the War of 1914-18, a number of electric railways have been abandoned, first main track mileage has declined 33 p.c. since 1925, and even in the larger cities electric railways generally have been obliged to increase their tariffs owing to the slow growth or actual decline of traffic.

### Subsection 1.—Equipment of Electric Railways.

Track mileage of electric railways has been gradually decreasing in recent years. Very little new construction has taken place; on the other hand, systems or parts of systems are being abandoned.

#### 24.—Mileage and Equipment of Electric Railways, 1935-38.

### Subsection 2.—Finances of Electric Railways.

The funded debt of electric railways has been reduced very little since 1930, although capital stock has been reduced almost one-third. Between 1930 and 1938 gross earnings were reduced 22 p.c., but operating expenses were cut 25 p.c. The operating ratio has been below 70 p.c. since 1934.

## Subsection 3.—Traffic of Electric Railways.

Statistics for electric railways reflect a steady building up of passenger and freight traffic since the depression years although mileage in operation has been reduced; accidents to passengers and employees show definite improvement in each class.

## 27.—Statistics of Electric Railway Operations, 1929-38.

NOTE.—Figures will be found at p. 676 of the 1933 Year Book for the years 1901-10; at p. 681 of the 1936 Year Book for the years 1911-18; and at p. 667 of the 1938 Year Book for 1919-28.

## Section 3.—Express Companies.\*

"Express service is an expedited freight service on passenger trains"; but express companies do not own the means of performing their services; they use railway facilities by virtue of contracts with the railway companies. Express companies in Canada have had close relations with the railways practically from the beginning. A brief history of the various express companies will be found at pp. 611-612 of the 1926 Year Book.

Goods are sent by express for quick transit, so that express rates do not compete with freight rates. Thus in its first tariff the Dominion Express Co., in pursuance of its contract with the Canadian Pacific Railway, gave a rate of  $2\frac{1}{2}$  times the maximum first-class railway freight rate for the same goods carried the same distance. The majority of the contracts between express and railway companies for carrying express freight are on the basis of a percentage of the gross express revenue. The rates are subject to the approval of the Board of Transport Commissioners.

**Express Company Operations.**—During 1938, three Canadian and one American express organizations operated in Canada. The Canadian Pacific Express Co., formerly the Dominion Express Co., is a subsidiary of the Canadian Pacific Railway and handles the express business on the railways and the inland and ocean

\* Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch issues an annual report on "Express Statistics".

steamship lines of the parent company. The express business of the Canadian National system and Northern Alberta Railway is handled by departments of the respective railways. The Railway Express Agency, Inc., operates over the Canadian sections of United States railways and over the route from Skagway to points in Yukon. These companies are all organized under powers conferred by Acts of the Dominion Parliament and their business consists in the expeditious shipment of valuable live stock, and such perishable commodities as fresh fish, fruit, etc., the forwarding of parcels and baggage, and the issue of money orders, travellers cheques, letters of credit, and other forms of financial paper. No statistics are available regarding the volume of traffic carried by express. Much of the traffic, of course, consists of parcels and small lots which would make statistical classification and measurement very difficult. However, there is also an important movement in car lots of live stock, fresh fish, fruit, vegetables, and other perishable commodities.

In the following tables the amounts paid by express companies to the carriers, i.e., railways, steamship lines, etc., for transporting the express matter, are shown under the heading "Express Privileges". Of the total of 65,024 miles operated in 1938, 42,048 were over steam railways, 275 over electric railways, 16,712 on ocean steamship services (mainly by the Canadian Pacific lines), 4,712 miles on inland or coastal steamboat routes, 435 by aircraft, and 842 miles over highways by motor trucks.

### 29.—Revenues and Expenses of Express Companies, 1929-38.

NOTE.—Corresponding figures for the years ended June 30, 1911-18, are given at p. 673 of the 1927-28 Year Book, and for the years 1919-28 at p. 669 of the 1938 edition.

## PART III.—ROAD TRANSPORTATION.\*

Since the recent development of highways in Canada has been almost exclusively for the purpose of providing roadbed for motor-vehicle traffic, highways and motor vehicles are treated as related features of transportation. After an introductory section, which briefly summarizes provincial regulations regarding motor vehicles and motor traffic, the whole subject of road transportation is dealt with under the headings of facilities, finances, and traffic, similar to the treatment of other forms of transportation.

## Section 1.—Provincial Motor Vehicle and Traffic Regulations.†

NOTE.—In this Section, it is obviously impossible to include the great mass of detailed regulations in force in each province. The purpose in view is to provide only the more important general information. The sources of information for detailed regulations for specific provinces are given at pp. 663-664. See also "The Highway and Motor Vehicle in Canada", an annual bulletin published by the Dominion Bureau of Statistics and obtainable from the Dominion Statistician, price 25 cents.

**General.**—The licensing of motor vehicles and the regulation of motor-vehicle traffic lies within the legislative jurisdiction of the Provincial Governments in Canada. Regulations that apply in all the provinces may be summarized as follows:—

**Operators Licences.**—The operator of a motor vehicle must be over a specified age (usually 16 years) and must carry a licence, obtainable only after prescribed qualification tests and renewable annually. Special licences are required for chauffeurs.

**Motor-Vehicle Regulations.**—In general, all motor vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two registration plates, one on the front and one on the back of the vehicle (one only, for the back, in the case of trailers). A change in ownership of the vehicle must be recorded with the registration authority. However, exception from registration is granted for a specified period (usually at least 90 days) in any year to visiting private vehicles registered in another province or a State that grants reciprocal

\* Except as otherwise indicated, the material in this Part has been revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics.

† The information in this Section has been revised from material provided by the officials in charge of the administration of Motor Vehicle and Traffic Acts and Regulations in the individual provinces.

treatment. Further regulations require a safe standard of efficiency in the mechanism of the vehicle and in its brakes, and provide for its equipment with non-glare headlights and a proper rear light, with a satisfactory locking device, a muffler, a windshield wiper, and a rear-vision mirror.

*Traffic Regulations.*—In all the provinces, vehicles keep to the right-hand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. While permissible speeds vary in different provinces, slower speeds are always required in cities, towns, and villages, in passing schools and public playgrounds, at road intersections, railway crossings, or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. Motor vehicles must not pass a street car that has stopped to take on or discharge passengers except where safety zones are provided. Accidents resulting in personal injury or property damage must be reported to a provincial or municipal police officer and any driver involved must not leave the scene of accident until he has rendered all possible aid.

*Penalties.*—These ascend in scale from small fines for minor infractions of any of the regulations to a suspension of the operator's driving permit, impounding of the car or imprisonment for serious infractions, recklessness, driving without an operators licence, and especially for attempting, while intoxicated, to operate a motor vehicle.

There is such wide variation in the different provinces regarding the basis of licences and fees, the regulation of public commercial vehicles, details of traffic rules, speed, and the use of motor vehicles, that it is impossible even to outline them satisfactorily in the space available here. The most important features are summarized in the annual bulletin referred to in the headnote to this Section, p. 662. The authorities responsible for the administration of motor vehicles and the legislation governing vehicles and traffic are given below for each province.

**Prince Edward Island.**—*Administration.*—The Provincial Secretary, Charlottetown. *Legislation.*—The Highway Traffic Act (c. 2, 1936) and amendments.

**Nova Scotia.**—*Administration.*—Motor Vehicle Branch, Department of Highways and Public Works, Halifax. *Legislation.*—The Motor Vehicle Act (c. 6, 1932) and amendments and the Motor Carrier Act (c. 78, R.S.N.S. 1923) as amended by c. 29, 1937.

**New Brunswick.**—*Administration.*—Motor Vehicle Division, Department of Public Works, Fredericton. *Legislation.*—The Motor Vehicle Act (c. 20, 1934).

**Quebec.**—*Administration.*—Motor Vehicle Bureau, Provincial Revenue Offices, Treasury Department, Quebec. *Legislation.*—The Motor Vehicle Act (c. 35, R.S.Q. 1925) and amendments.

**Ontario.**—*Administration.*—Motor Vehicles Branch, Department of Highways, Toronto. *Legislation.*—The Highway Traffic Act. (c. 288, R.S.O. 1937) and amendments.

**Manitoba.**—*Enforcement.*—Attorney General. *Registrations.*—Treasurer, Revenue Office, Winnipeg. *Legislation.*—The Highway Traffic Act (c. 19, 1930) and amendments.

**Saskatchewan.**—*Administration.*—Provincial Tax Commission, Highway Traffic Board, Revenue Building, Regina. *Legislation.*—The Vehicles Act (c. 83 1939).

**Alberta.**—*Administration.*—Motor Vehicle Branch, Department of the Provincial Secretary, Edmonton, and Alberta Highway Traffic Board, Edmonton. *Legislation.*—The Vehicles and Highway Traffic Act (c. 31, 1924) and amendments, and Public Service Vehicles Act (c. 91, 1936).

**British Columbia.**—*Legislation.*—The Motor Vehicle Act (c. 195, R.S.B.C. 1935), and the Highway Act (c. 116, R.S.B.C. 1935) and amendments thereto, as well as the Motor Carrier Act (c. 36, R.S.B.C. 1939). Administration and enforcement of the Motor Vehicle Act and enforcement of the Highway Act and Motor Carrier Act is vested in the Commissioner of Provincial Police, Victoria, B.C., while the Highway Act is administered by the Minister of Public Works, Victoria, B.C., and the Motor Carrier Act by the Public Utilities Commission, Victoria, B.C.

**Yukon.**—*Administration.*—Territorial Secretary, Dawson, Yukon. Information regarding regulations may also be obtained from the Lands, Parks, and Forests Branch, Department of Mines and Resources, Ottawa. *Legislation.*—The Motor Vehicle Ordinance, No. 14, 1914, and amendments.

## Section 2.—Roads and Vehicles.

The facilities for road transportation are dealt with in two subsections devoted, respectively, to roads and highways and to motor vehicles.

### Subsection 1.—Roads and Highways.

**Historical.**—A brief description of the early colonization roads in Canada is given at p. 733 of the 1934-35 Year Book.

**Recent Highway Development.**—With the rapid increase in the percentage of motor-car owners to population (see pp. 665-666) the demand for improved roads has become more and more insistent since the War of 1914-18. Furthermore, the advantages to be gained by attracting touring motorists have been a powerful incentive to governing bodies to improve trunk roads and scenic highways within their jurisdictions. One sphere where the motor-car has been of special economic advantage has been in rural areas, where its speed and economy are a great improvement over the old horse-drawn vehicle. As a result, in the Census of 1931 every second farm reported a farm-owned motor vehicle (1.96 farms per farm-owned motor vehicle). This widespread rural ownership of automobiles has, in turn, brought about an improvement of secondary rural roads.

The table of road mileages, p. 665, includes all roads under provincial jurisdiction and local roads in the Maritime Provinces and Ontario and estimates of local roads in the four western provinces. There are great stretches of country in the northern portions of Quebec, Ontario, the Prairie Provinces, and British Columbia with very few people and very few roads, but the southern portions are well supplied. The Trans-Canada Highway is now under construction, running from the Atlantic to the Pacific Oceans entirely in Canadian territory.

Statistics of urban streets have been collected since 1935 from cities and principal towns; the small municipalities omitted would increase the totals very little. For 1938 the total number of miles of street reported was 12,877, composed of: 2,304 miles of sheet asphalt; 900 miles of portland cement concrete; 1,444 miles of bituminous macadam, concrete, and other bituminous surfaces; 567 miles of water-bound macadam; 2,617 miles of gravel and crushed stone; and 807 miles of other surfaces; making a total of 8,639 miles of surfaced streets and 4,238 miles of earth roads. These figures for urban streets or roads are not included in the table of highway mileage.

## 1.—Classification of Highway Mileage, by Provinces.

NOTE.—The date for which the mileage was reported is indicated for each province. The figures for Canada are the sums of the mileages so reported. Urban streets are not included in the figures.

Classification.	P.E.I. Dec. 31, 1937.	N.S. Nov. 30, 1938.	N.B. Oct. 31, 1938.	Que. June 30, 1938.	Ont. 1	Man. Apr. 30, 1939.	Sask. Mar. 31, 1939.	Alta. Mar. 31, 1939.	B.C. Mar. 31, 1938.	Total.

<sup>2</sup> None reported.  
<sup>3</sup> Incomplete, see footnote 2.  
<sup>4</sup> Includes some water-bound macadam.

## Subsection 2.—Motor Vehicles.

**Registration.**—The average population per vehicle registered was 8.1 in 1938. Canada ranked fourth in this respect, the United States being first with 4.4. On the basis of the total registration of 1,394,853, only four countries had larger numbers in 1938, viz., United States, United Kingdom, France, and Germany.

## 2.—Motor Vehicles Registered in Canada, by Provinces, 1929-38.

NOTE.—Registrations given here include passenger cars, trucks, buses, motorcycles, service cars, etc., but not trailers or dealer licences. Figures for the years 1904-28 are given at p. 668 of the 1937 Year Book.

1938.....	166,086	15,154	181,240	57,767	142	57,909	123,331

Prior to 1925 the figures do not show a pronounced trend but between 1925 and 1929 they increased substantially. From 1929 to 1932 the decrease was rapid and continuous but was practically halted in 1933, in which year production showed some improvement but mainly on account of the export demand. In 1938 the apparent consumption showed a decrease of 38,058 from the figure for 1937. Statistics regarding retail sales and sales financing of motor vehicles in Canada appear at pp. 622-624 of this volume.

### Section 3.—Finances of Road Transportation.

The cost of road transportation to the people of Canada might be summarized under the following headings: expenditures on roads and highways; expenditures of individuals and corporations on owned motor vehicles; and expenditures for freight and passenger services rendered by motor-vehicle public carriers such as taxi, bus, and motor transport companies. Since expenditures on roads and highways are made almost entirely by governmental bodies, fairly complete statistics are available regarding them, but, owing to the tremendous number of individuals and organizations that would have to be canvassed and the difficulties involved, complete statistics are not available under the other two headings.

At p. 665 of the 1939 Year Book an estimate is given of the value of motor vehicles in use in Canada in the year 1937. The expenditure for the purchase of new motor vehicles is given in this volume in the chapter on Internal Trade at p. 623, and sales of gasoline are given at p. 671.

Since no statistics are available regarding the earnings of motor transport and bus companies, it is impossible to make an estimate of the annual expenditure for the services provided by these public carriers.

**Expenditures on Roads and Highways.**—Roads in Canada, except in the Territories and the National Parks, are under the jurisdiction of provincial and municipal authorities. The Dominion Bureau of Statistics has completed a compilation of expenditures on highways, bridges, ferries, and foot-paths, for the period 1919-37. This compilation includes expenditures by the Dominion on roads, bridges, etc., in the National Parks, and by the provinces and by rural municipalities in Ontario on unemployment road projects. It also covers the bulk of the expenditures on rural roads and on bridges and ferries, which are links in the road systems. The present extensive provincial highway systems have been developed almost entirely since the War of 1914-18 to meet the requirements of motor traffic. However, old gravel and water-bound macadam roads formed foundations in many places for new concrete and bituminous surfaces.

The total expenditures during these nineteen years were: for construction \$780,571,155, and for maintenance \$326,401,275, expenditures for plant and general items being divided between construction and maintenance on a *pro rata* basis, where not allocated by the authorities. A table at p. 666 of the 1939 Year Book summarizes these expenditures on roads for the whole period 1919-37; Table 5, p. 668, shows such expenditures during recent individual years.

### 5.—Capital, Maintenance, and General Expenditures on Rural Highways in Canada, by Provinces, 1934-38.

NOTE.—Provincial expenditures are for their respective fiscal years ended on the dates indicated in Table 1, p. 665.

<sup>1</sup> No report.

<sup>2</sup> Total expenditures divided between capital, maintenance, and general on 1935 basis.

<sup>3</sup> Does not include Prince Edward Island.

**Provincial Funded Debt Incurred for Highways.**—By far the greater portion of the highway expenditures has been made by the provinces and consequently must be paid out of provincial taxes. Payment for much of the construction costs has been deferred and this has accounted for part of the rapid increase in provincial funded debt since 1919. In 1919 the net funded debt of all the provinces was \$290,748,592; by 1938 it had increased to \$1,626,251,367 (see Table 32, p. 869) and the portion chargeable to highways was \$639,658,405 or more than double the net debt for all purposes in 1919. As already explained at p. 667, the provincial systems of modern motor roads have been developed almost entirely since 1919 and prior to that time the provincial expenditures on highways were relatively small.

**6.—Provincial Government Funded Highway Debt and Annual Charges Thereon, 1936-38.**

NOTE.—Provincial Governments report for their respective fiscal years ended on the dates indicated in Table 1, p. 665.

<sup>1</sup> 1934 data.

<sup>2</sup> Not reported.

<sup>3</sup> Less sinking fund payments in Ontario and Alberta.

<sup>4</sup> Less Ontario, Manitoba, and Alberta; see footnote 2.

**Provincial Government Revenue.**—The taxation of motor vehicles, garages, chauffeurs, etc., is becoming an important source of Provincial Government income. In every province the following licences or permits, duly issued by the provincial authorities, are required: motor vehicles of all kinds, trailers (in all provinces except Alberta), operators or drivers, paid chauffeurs, dealers, garages, and gasoline and service stations. A sales tax on gasoline is also levied by each province. The more important sources from which provincial revenues from motor vehicles are derived are shown in Table 7. Dominion Government revenues from import duties, excise, and sales taxes are not included.

### 7.—Provincial Revenues from the Taxation of the Distribution and Operation of Motor Vehicles, 1937 and 1938.

NOTE.—See the headnote to Table 6.

Province.	Passenger Cars.	Trucks.	Motor-cycles.	Dealer Licences.	Operators and Chauffeurs.	Mileage Tax on Motor Buses and Trucks.	Gasoline Tax.	Total, Including Miscellaneous Revenue.

## Section 4.—Road Traffic.

Up to the present the motor vehicle has affected passenger traffic more than freight traffic of the steam and electric railways. This diversion of passenger traffic has been effected largely by the private automobile, although the motor bus is rapidly becoming more important and now operates between all large centres. The motor truck also carries a considerable amount of freight, although no statistics showing the tonnage handled are as yet available. The difficulties of collecting statistics from the very large number of unorganized operators concerned are obvious.

Widely differing opinions are held regarding the extent to which the motor vehicle has cut into railway traffic.\* A definite conclusion cannot be reached until reliable statistics regarding motor-vehicle traffic are available. While undoubtedly the passenger motor vehicle now carries a certain amount of passenger traffic that would otherwise be carried by steam or electric railways, the error should be avoided

\* Counsel for the railways before the Transport Committee of the Senate of Canada in 1938 presented arguments showing a serious loss of revenue by the railways from motor-vehicle competition. On the other hand, in *Automobile Facts and Figures, 1936*, published by the Automobile Manufacturers' Association, estimates of railway and motor traffic are given which, in the field of freight movement, rather minimize the seriousness of the motor-truck competition, if conditions of motor traffic in Canada may be assumed to be similar to those of the United States.

of considering all the passenger movement by motor vehicles as a loss to the railways. Much of that movement is due to the convenience and cheapness of motor-vehicle travel and would not take place at all under less favourable circumstances.

Similar considerations apply, to some extent, to freight moved by motor trucks. Part of the short-haul truck traffic has displaced the horse-drawn vehicle rather than the railway. Furthermore, traffic diverted from the railways to motor vehicles has been offset to some extent by new traffic for the railways created by the automobile industry, consisting of raw and finished products of manufacture, motor fuel and oil, and materials for construction and maintenance of roads suitable for motor travel.

On the other hand a phase of this new competition with railway transportation has been its effect on freight rates. The railway rate structure took into consideration the value of the goods handled, i.e., bulk and low-value commodities were carried at relatively low rates, while manufactured and high-class commodities were at higher rates, the difference in rates having little relation to the difference in costs of transportation. Such a structure allowed raw materials to be moved cheaply and the railways were compensated by higher rates on the finished commodities. The motor truck is changing this; the motor-truck operator carries these high-class commodities at rates closer to actual costs and does not attempt to carry raw materials except in special cases. His costs are reduced by a right-of-way being supplied for which he pays only a part of the cost and, if his rates are much above the actual cost, the manufacturer can quite easily supply his own transportation. Some branch lines of the railways are practically deserted except for a short time each year when snow interferes with motor-vehicle operation. Consequently, railway losses include both losses from freight diverted and also from reductions in rates for high-class freight in attempts to retain such traffic without compensating increases in low-class freight rates.

**Gasoline Consumption.**—All provinces require retail sales of gasoline to be reported and a tax is imposed on all gasoline consumed by motor vehicles using the highways and streets and also on that used for an increasing number of other purposes. However, the taxable gasoline is still largely consumed by motor vehicles and indicates in a general way the increase or decrease in the use of motor vehicles. Net sales are the differences between the total or gross sales reported and the quantities on which the tax is refunded in whole or in part, or on which the tax is not imposed at the time of sale.

<sup>1</sup> Revised since the publication of the 1939 Year Book.

**Motor-Vehicle Accidents.**—Motorists are required to report accidents but comprehensive statistics are not available for all provinces. The Vital Statistics Branch of the Bureau of Statistics compiles statistics on all deaths from motor-vehicle accidents and these are shown in Table 9. A direct comparison of such statistics between the provinces is of little value due to differences in size, population, motor-vehicle density, etc., but, to put them on somewhat the same basis, the average number of deaths per 10,000 registered motor vehicles has also been tabulated. These data still give no weight to differences in use of motor vehicles, differences in climate, roads, tourist cars, etc., all of which are factors in accidents.

Table 10 shows the numbers of persons killed or injured in automobile accidents as reported by the motor-vehicle branches of the Provincial Governments. It is quite possible that the latter reported some persons as injured who subsequently died from the injuries and these would be included in the fatalities of the vital statistics shown in Table 9; also accidents that occurred late in December and resulted in deaths would be charged to December by the provincial authorities but to January of the next year in the vital statistics. Consequently, these data do not agree.

### 9.—Deaths Resulting from Motor-Vehicle Accidents in Canada, by Provinces, 1926-33.

<sup>3</sup> Includes two fatalities resulting from

## PART IV.—WATERWAYS.\*

Under this heading the statistics relating to shipping, aids to navigation, canals, and harbours are brought together because they are all essential and integral parts of the facilities for water-borne traffic; these facilities work together to promote the expeditious handling of the same freight without reference to transshipment which

\* Information and statistics dealing with this subject have been supplied as follows: aids to navigation, harbours, administrative services, and Government merchant marine, by the Department of Transport and the National Harbours Board; graving docks and part of the financial statistics, by the Department of Public Works; Panama Canal, by the Governor of the Panama Canal Zone; other canal traffic, and statistics of shipping, by the Transportation and Public Utilities Branch, Dominion Bureau of Statistics.

may or may not be necessary to overcome intervening obstacles. Under this form of treatment all the facilities for water-borne traffic are first presented, then the cost or other available financial statistics and, finally, figures that give some indication of the traffic handled. The general aim is to present a balanced picture of water transportation so far as the data permit.

**The Canada Shipping Act.**—Legislation regarding all phases of shipping was consolidated under the Canada Shipping Act (c. 44, 1934). The Act was a sequel to the passage of the Statute of Westminster in 1931, under which the Parliament of Canada accepted full responsibility for the regulation of Canadian shipping. The Canada Shipping Act was a comprehensive piece of legislation and constituted, in fact, the incorporation in the shipping law of Canada of features of international agreements and of British and previous Canadian legislation. A brief summary of the Act is given at pp. 681-683 of the 1938 Year Book.

### Section 1.—Equipment and Facilities.

The developments and equipment to facilitate water traffic are classified under the sub-headings of shipping, aids to navigation and miscellaneous works, canals, and harbours. A subsection is added giving figures of administrative activities regarding the pilotage service, steamship inspection, personnel, and accidents to shipping.

#### Subsection 1.—Shipping.

Although a large part of the water-borne traffic, especially inland and coast-wise, is carried in ships of Canadian registry, the commerce of the Dominion is by no means entirely dependent upon Canadian shipping since all waterways, including canals, and inland lakes and rivers, are open upon equal terms, except in the case of the coasting trade, to the shipping of all countries of the world.

**Canadian Registry.**—Under Part I of the Canada Shipping Act, every ship that falls under the definition of "British ship" given in Sect. 6 of the Act and is controlled as to management and use in Canada, must, unless registered elsewhere in the Empire, be registered in Canada. An exception is made in the case of ships not exceeding 10 tons register and engaged solely in coastal or inland navigation. A ship (whatever her qualification for British registry) that is not registered in any part of His Majesty's dominions, is not entitled to the privileges accorded to British ships. Vessels about to be built *may* be recorded, and vessels being built or equipped *must* be recorded, by a registrar of British ships under the Act. The procedure for the registration in Canada of British ships and the issuance of certificates is covered in Sects. 9-36. Sects. 64-70 govern the registry of alterations (or the registering anew if such be required) and lay down penalties for non-compliance with the requirements. The conditions governing transfer of registry are also laid down.

For a record of the number and tonnage of ships engaged in the carrying trade of Canada, see the tables under Section 3 (pp. 692-695) of this Part of the chapter. The tables are included there under traffic statistics because they relate more directly to traffic and services than merely to the shipping available. For an account of the shipping services operated by the Dominion Government, see pp. 682-686.

**Subsection 2.—Aids to Navigation and Miscellaneous Works.**

Included under this heading are the lighthouses and the whole system of marine danger signals on the east and west coasts of Canada, on Hudson Bay and Strait, the St. Lawrence River and Gulf, the inland rivers and lakes, and at the entrances to harbours—a very extensive system designed to provide safe navigation in all Canadian waters. In addition, a pilotage service is maintained in waters where navigation is difficult; this service is described under marine services at p. 683. As a further aid to safe navigation, there are chains of radio signal and direction-finding stations which are described under radiotelegraphy, at pp. 723-724.

## 2.—Marine Danger Signals Maintained in Canada, Fiscal Years 1928-39.

NOTE.—In addition to the aids to navigation listed, approximately 9,268 unlighted buoys, balises, dolphins, and beacons are maintained. The figures are supplied by the Department of Transport.

A great deal has been done to improve navigable waters by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Probably the largest task of this nature has been the St. Lawrence River Ship Channel. An extensive floating plant is in service to maintain and improve the deep-water channel from Montreal to the sea for ocean-going shipping. Incidental to these developments of navigable waters are works to guard shorelines and prevent erosion, and also the control of roads and bridges that cross navigable channels. In order to prolong the season of navigation in important waters that freeze over in winter, ice-breaking operations are carried on at both the beginning and end of winter. This is particularly the case in connection with sea-going shipping from Montreal.

## 3.—Duration of the Season of Open Navigation in the St. Lawrence Ship Channel, 1911-39.

NOTE.—For the years 1882-1910, see Canada Year Book 1934-35, p. 756.

<sup>1</sup> "Channel Open" means it can be navigated although there may be floating ice still in the river.

## Subsection 3.—Canals.

Before the period of extensive railway construction, which commenced for Canada in the 1850's, the water routes, more especially the St. Lawrence, the Great Lakes, and the Ottawa, were the chief avenues of transportation. These routes were interrupted at certain points, necessitating portages, and to eliminate the toil of unloading, transporting, and reloading at the portages the canals of Canada were constructed.

<sup>1</sup> Navigable depths are occasionally less at times of extremely low water.<sup>2</sup> Minimum depth between locks 25 ft. <sup>3</sup> This depth may be increased to 8 ft. 4 ins., on reasonable notice being given for the accommodation of larger commercial vessels.<sup>4</sup> Minimum depth of navigable channels is 4.5 ft. <sup>5</sup> Minimum depth of canal with Lake Ontario at elevation 244 ft. above sea-level is 11 ft.<sup>6</sup> The depth of canal prism is 17 ft.

The earliest mention of canals in Canada is in connection with the Lachine Canal, begun by early French settlers in 1700. Only after the conquest of Canada by the British, however, were improvements of the main water routes made. In the early part of the 19th century increased internal and foreign trade and the introduction of steam navigation resulted in more attention being given to this work. Although some of the early canals were constructed primarily for military purposes, they soon became essential to the commercial life of the country. However, since

the development of railways in Canada, and even more since the growth of motor-vehicle traffic, the canals, with the exception of those on the Great Lakes-St. Lawrence River route, are playing a minor part in the transportation activities of the country.

The principal canals of Canada are under the jurisdiction of the Dominion Department of Transport and each is accessible from the Atlantic Ocean. They serve six routes: (1) Montreal to Port Arthur and Fort William, via the St. Lawrence River and Great Lakes; (2) Montreal to the International Boundary near Lake Champlain, via the Richelieu River; (3) Montreal to Ottawa, via the Ottawa River; (4) Ottawa to Perth and Kingston, via the Rideau and Cataraqui Rivers; (5) Trenton, at the mouth of the Trent River on Lake Ontario, to the mouth of the Severn River on Lake Huron; and (6) St. Peters, Nova Scotia, on the Atlantic Ocean, to the Bras d'Or Lakes. The aggregate length of these six routes is 1,890 miles, the total of actual canal being 509 miles. A detailed description of the individual canals is given at pp. 626-629 of the 1926 Year Book.

Under the jurisdiction of the Dominion Department of Public Works are St. Andrews Lock (length, width, and draft, respectively, 215, 45, and 17 feet) at Selkirk on the Red River, Man., and two or three smaller and widely separated locks in other provinces. There are also a few small isolated locks, each controlled under the authority of the province in which it is situated.

#### Subsection 4.—Harbours.

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Equipment designed to facilitate interchange movements includes the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for the handling of general cargo, and special equipment for such bulk freight as lumber, coal, oil, grain, etc. Equipment may include cold storage, harbour railway and switching connections, grain elevators, coal bunkers, oil storage tanks, and, in the main harbours, dry-dock accommodation.

Eight of the principal harbours of Canada are administered by the National Harbours Board; seven others by commissions which include municipal as well as Dominion Government appointees; and the remainder by harbour masters directly under the authority of the Department of Transport.

At most ports, in addition to the harbour facilities owned by the National Harbours Board or other operating commission, there are dock and handling facilities owned by private companies such as railways, pulp and paper, oil, and sugar industries, etc. At a number of ports there are also graving docks which are dealt with separately.

#### 5.—Facilities of Six of the Principal Harbours of Canada, as at Dec. 31, 1939.

**National Harbours Board.\***—Prior to 1935 the administration of each of Canada's national harbours was under a local harbour commission, appointed by the Dominion Government and operating under special Dominion statutes. These harbour commissions were financed by the revenues of their respective ports, by the use of their limited borrowing power, and, to a great degree, by loans from the Dominion Government. With the object of bringing these national harbours under unified governmental control, the National Harbours Board Act was introduced and passed at the 1936 session of Parliament, and went into effect on Oct. 1 of that year. The Act was based mainly on recommendations made by Sir Alexander Gibb, noted British engineer with a wide experience in port construction and operation, who was engaged by the Dominion Government in 1931 to undertake a survey of the national port situation in Canada. Prior to the passing of this Act, the Dominion Government had, in 1935, put into effect some of the principal recommendations resulting from this survey. This was effected by the appointment of three senior Government officials at Ottawa to act as Harbour Commissioners of the seven national ports that it was intended to bring under centralized control. This form of administration continued to function until the National Harbours Board Act was passed and the permanent Board was appointed.

The National Harbours Board Act provides for the creation of a Board consisting of three members under the direction of, and responsible to, the Minister of Transport. In legal parlance, the Board is a statutory corporation created as an agency of the Crown and charged with the administration, management, and control of the harbours and properties placed under its jurisdiction. By the provisions of the Act, the powers, rights, and obligations of the former local harbour commissions were vested in the new Board, thus insuring continuity in respect to outstanding rights and obligations.

At the outset, the National Harbours Board was entrusted with the administration of the ports of Halifax, Saint John, Quebec, Three Rivers, Montreal, Chicoutimi, and Vancouver. Since 1936, the port of Churchill on Hudson Bay, the grain elevator at Prescott on the St. Lawrence, and the grain elevator at Port Colborne on Lake Erie, were placed under the Board, pursuant to a provision in the Act that permits the Governor in Council to transfer any harbour or property of the Dominion to the Board for administrative purposes.

The Act gives the Board wide and general powers of management and control. Certain powers are reserved to the Governor in Council, the chief of which is the making of rates and tolls on vessels and goods moving into or out of the harbours under the Board's jurisdiction. Such tariffs of rates and tolls are prepared by the Board after careful study. Recommendations respecting them are made by the Minister of Transport and submitted by him to the Governor in Council; the tariff becomes effective upon publication in the *Canada Gazette*.

The Board operates on an annual budget submitted each year to the Minister of Transport, as required by the Act. The funds of each port must be kept separate and there must be no intermingling or transfer of funds from one port to another. The Minister of Finance is empowered to make advances for working capital not exceeding \$1,000,000 at any given time, such advances being repayable annually. The accounts of each port and the staff handling these accounts are under the direction and control of the Department of Finance, and all revenues received and expenditures made by the Board are subject to audit by the Auditor General of Canada.

\* Contributed by R. O. Campney, K.C., Chairman, National Harbours Board, Ottawa.

The Board is required to obtain by parliamentary vote funds necessary to meet deficits on account of operation and maintenance, interest due to the public on bonds outstanding, and new capital expenditures. As outstanding bond issues mature, they are retired by moneys voted by Parliament, and the moneys thus voted become capital obligations of the Board to the Government.

Local and maintenance engineering is carried on by the local port staffs. New capital works, where they have been approved by Parliament and funds for the construction thereof have been voted, are planned and supervised by the Board's staff of engineers permanently located at Ottawa. Where such works to be executed involve an expenditure of \$10,000 or more, public tenders must be called.

Local management of each of the harbours under the Board's jurisdiction devolves upon the Board's chief official at the port—the Port Manager. He is entrusted with the actual operation and maintenance of the port and is in charge of the local staff. In addition to his administrative duties, the Port Manager is charged with the responsibility of developing and maintaining close contact with port users, local authorities, and business organizations.

The National Harbours Board at present administers assets representing a capital investment of approximately \$225,000,000, comprising, in the aggregate, wharves and piers providing 25 miles of berthing space capable of accommodating 212 modern passenger and cargo vessels at one time; 84 transit sheds with floor space of 5,500,000 square feet; 14 grain elevators with a total capacity of 43,000,000 bushels; 3 cold-storage terminals with a combined storage capacity of 6,000,000 cubic feet; 3 terminal railway systems with a total trackage in excess of 120 miles; 2 bridges; and a multitude of smaller diversified facilities. In addition, the Board has large areas of land under lease as industrial sites.

The ports and properties administered by the National Harbours Board are as follows:—

The ports of Halifax, N.S., and Saint John, N.B., on the Atlantic Coast, are all year around ports, but have their busiest season in the winter months when the St. Lawrence River is closed to navigation. In both these ports the Board controls and operates practically all the facilities.

At Halifax, 7 large piers with approximately  $2\frac{1}{2}$  miles of berthing, and equipped with 13 transit sheds; a grain elevator with a capacity of 2,200,000 bushels; and a cold-storage terminal with modern freezing facilities and 1,000,000 cubic feet of storage are operated by the Board.

At Saint John, the harbour facilities administered by the Board include 7 piers with between 2 and  $2\frac{1}{2}$  miles of berthing and 15 transit sheds. The Board also administers a grain elevator at this port, with a capacity of 1,500,000 bushels and served by over 2 miles of grain galleries, which is operated by the Canadian Pacific Railway under agreement with the Board.

On the St. Lawrence River, the Board operates the Harbours of Quebec, Three Rivers, and Montreal, and the port of Chicoutimi, situated 75 miles up the Saguenay River, a tributary of the St. Lawrence. These ports are closed to navigation during the winter months.

At Quebec, the Board operates 4 main piers with over  $3\frac{1}{2}$  miles of berthing and 9 transit sheds. Grain elevator space with a capacity of 4,000,000 bushels, a cold-storage warehouse with a capacity of 500,000 cubic feet, a fish-freezing and storage warehouse with a capacity of 1,000,000 pounds, and 32 miles of terminal railway also come under the jurisdiction of the Board.

At Three Rivers, the Board operates 3 large wharves with  $1\frac{1}{2}$  miles of berthing and 8 transit sheds.

At Montreal, the Board operates all the port facilities, including 28 piers and wharves, with 27 transit sheds and over 10 miles of berthing; 4 grain elevators with a total capacity of 15,000,000 bushels, served by 3½ miles of grain galleries; a cold-storage terminal with a capacity of over 4,500,000 cubic feet; and over 60 miles of terminal railway. The Board also operates the Jacques Cartier Bridge over the St. Lawrence which was completed some years ago at a cost of \$19,000,000.

At Chicoutimi, the Board operates 2,600 linear feet of wharf, 2 transit sheds, and 8,500 feet of railway tracks.

At the port of Vancouver on the Pacific Coast, the Board operates 2 piers and 2 jetties, with 1¾ miles of berthing and 6 transit sheds. The Board also administers 4 grain elevators with a capacity of nearly 9,000,000 bushels, which are operated under leases by private parties. It operates 30 miles of terminal railway and maintains storage for almost 500,000 gallons of vegetable and fish oil, and operates a fish dock and ice plant as well as other smaller facilities. The Board also has under its jurisdiction the Second Narrows Bridge.

At the Port of Churchill on Hudson Bay, the Board operates a large pier and transit shed and a grain elevator with a capacity of 2,500,000 bushels.

At Prescott, Ont., on the upper St. Lawrence River, the Board operates the large terminal grain elevator which has a capacity of 5,500,000 bushels.

At Port Colborne, Ont., at the Lake Erie entrance to the Welland Ship Canal, the Board operates a grain elevator with a capacity of 3,000,000 bushels.

Operating revenues and expenditures of each of these harbours and elevators are given for the years 1935-39 in Table 15, p. 690.

Since the entry of Canada into the War, the importance of the national harbours, as a link between Canada's extensive railway systems and inland waterways and the great ocean trade routes of the world, has greatly increased. Expeditious handling of supplies destined for overseas is of vital importance to the success of Canada's war effort. The increased harbour facilities under governmental control in 1938 as compared with the year preceding the War of 1914-18 is an important factor in the solution of the shipping problems of the Government during the present conflict. Canadian ports are in a much better position for the smooth and expeditious handling of traffic than at the outbreak of war in 1914.

**5A.—Facilities Operated and Controlled by the National Harbours Board in the Six Principal Harbours, 1938, Compared with Government-Operated Facilities in 1913.**

**Public Harbours and Harbour Masters.**—In other ports, the Governor in Council as formerly, may create public harbours by proclamation, as provided

by Part X of the Canada Shipping Act (c. 44, 1934), and the Minister of Transport may, from time to time, appoint harbour masters for these ports, who will administer them under rules and regulations approved by the Governor in Council. Remuneration of these harbour masters will be from fees levied on vessels under the terms of the Act.

**Graving Docks.**—The Department of Public Works of the Dominion Government has constructed five dry docks, dimensions of which are shown in Table 6. The dock at Kingston, Ont., is under lease to the Kingston Shipbuilding Company, while the old Esquimalt Dry Dock was temporarily transferred to the Department of National Defence on Nov. 1, 1934. This transfer is to be effective until such time as the dock is commercially required, when it will be returned to the control of the Department of Public Works. The large dry docks at Lauzon, Que., and Esquimalt, B.C., can be divided into two parts and were built at a cost of approximately \$3,850,000 each. Under the Dry Dock Subsidies Act, 1910 (9-10 Edw. VII, c. 17), several docks have been subsidized by payments of 3 to 4 p.c. per annum on the original cost for a given number of years, as shown in Table 7.

#### Subsection 5.—Marine Services and Operations of the Dominion Government.

The services covered by this subsection are those dealing with the pilotage service, steamship inspection, sea-faring personnel, and accidents to shipping,

and the operations are those of the Canadian Government Merchant Marine, and the Canadian National (West Indies) Steamships.

**Pilotage.**—This service functions under the provisions set forth in Part VI of the Canada Shipping Act (c. 44, 1934). Qualified pilots may offer their services to the stranger in local and confined waters. At the same time, pilotage might also be considered as a method of insurance—the fewer accidents, the cheaper insurance rates will be.

There are 40 pilotage districts in Canada, eight of which, namely, Sydney, Halifax, Saint John, Quebec, Montreal, St. Lawrence-Kingston-Ottawa, British Columbia, and Churchill, are under the Minister of Transport as Pilotage Authority. The Pilotage District of New Westminster, B.C., is under a local authority. The other districts function under local Pilotage Authorities appointed by the Governor in Council under the provisions of the Canada Shipping Act.

Table 8 shows the number and aggregate tonnage of ships using pilots for the major Canadian ports during the two latest fiscal years. Corresponding statistics are not available for the St. Lawrence-Kingston-Ottawa District.

8.—Details of Pilotage, by Districts, Fiscal Years 1938 and 1939.

**Steamship Inspection.**—The Steamship Inspection Service provided for under Part VII of the Canada Shipping Act, 1934, consists of a headquarters staff, at Ottawa, and staffs of inspectors at the principal ocean and inland ports. The Act provides for a Board, known as the Board of Steamship Inspection, which decides on questions arising out of the administration of the Act. The Steamship Inspection Service is responsible for the administration and carrying out of the provisions of Part VII of the Act respecting the periodic inspection of power-driven ships and the issue of inspection certificates, the assignment of load lines, the conditions under which dangerous goods may be carried in ships, and the protection against accident of workers employed in loading or unloading ships. The Steamship Inspection Service is also responsible for the administration and carrying out of the provisions of Part II of the Act relating to the certification and employment of marine engineers.

<sup>1</sup> Includes 328 lives lost in the *Princess Sophia* disaster.

**Canadian Government Merchant Marine.**—The circumstances under which the Canadian Government became possessed of and responsible for the operations of a merchant marine are explained at p. 776 of the 1934-35 Year Book.

This merchant fleet reached its greatest development in 1924 and at Dec. 31 of that year numbered 57 vessels of a total deadweight tonnage of 353,450, representing an original capital investment of \$79,661,921. On June 8, 1936, the 10 remaining vessels were disposed of for a consideration of \$389,444. A table showing the operating results from 1919 to 1936 appears at p. 689 of the 1937 Year Book.

**Canadian National (West Indies) Steamships.**—In conformity with the Canada-West Indies Trade Agreement Act of 1926 (16-17 Geo. V, c. 16), the Dominion Government has provided direct steamship services to the West Indies through

the medium of Canadian National (West Indies) Steamships, Ltd. The service is provided by a fleet of eleven vessels of a total deadweight tonnage of 62,761. Five of these craft, known as the 'Lady' ships, were specially constructed for passenger service on this route, while the remaining six vessels previously formed part of the Canadian Government Merchant Marine fleet, and were taken over by the Canadian National (West Indies) Steamships, Ltd., for operating purposes, under entrusting agreements with the respective companies that owned the ships. The investment in vessels at Dec. 31, 1938, amounted to \$10,960,958, mainly made up of the construction cost of the 'Lady' ships and the present-day valuation of the other six ships, together with the cost of conversion for use in the West Indies service of three of the latter. The financial results of the operations of the Canadian National (West Indies) Steamships, Ltd., have been as follows:—

## Section 2.—Financial Statistics of Waterways.

The principal statistics available to aid in making an appraisal of the cost of water-borne traffic consist of the record of public expenditures on waterways. Such expenditures are classified as investments, expenditures for maintenance and operation, and revenues from operation. Undoubtedly, in so far as capital expenditures for the permanent improvement of waterways are concerned, those of the Dominion Government cover the major part. There has been some expenditure by municipalities on local harbour facilities, while private capital expenditure is also confined almost entirely to terminal or dockage facilities. The investment in shipping, however, with the exception of the Canadian National (West Indies) Steamships, as shown above, has come almost entirely from private sources such as railway companies, steamship companies, industrial corporations, and private individuals. No figures are available regarding private investments in shipping except those appearing in the reports of the operating companies which cover only a portion of the field. Neither are there statistics showing the revenues of ship operators from passenger and freight traffic. In the case of railways, statistics show fairly completely: (1) the investment in plant, roadbed, etc.; (2) the revenues of the railways or the annual payment by the people of Canada for the passenger and freight transportation; and (3) the annual deficits which are also indirectly paid by the public whether as investors or taxpayers. No such picture can be given for water-borne traffic.

Owing to the fact that all the items comprising waterways and harbours cannot be put on a comparable basis, it is not possible to show cumulative figures of capital

expenditures to date, with any degree of accuracy. Table 12, therefore, shows only capital expenditures for the fiscal year 1939.

For those ports and harbours not under the control of the National Harbours Board, Dominion Government capital expenditures, made by the Department of Public Works, are included in the classification "Other harbours, rivers, construction". The classification as between capital and operations expenditure is very difficult to make with respect to certain of the items. This difficulty applies particularly in the case of dredging, where the distinction between the removal of accumulating silt and the deepening of a channel is largely one of opinion. For this reason, the dredging account of the Department of Public Works is not included in the investments of Table 12, although a large part of the work is undoubtedly of the nature of permanent improvements.

## 12.—Capital Expenditures of the Dominion Government on Waterways and Harbours, Fiscal Year 1939.

NOTE.—The dredging expenditures of the Department of Public Works cannot be divided accurately between capital and maintenance expenditures and therefore the amounts spent for dredging that should be charged to capital account are not shown in this table.

## Section 3.—Water Traffic and Services.

Complete statistics, comparable to those given for the railways, showing all the freight carried by water, are not available. Indeed it would be very difficult to obtain a record of the traffic handled by small independent coasting vessels. However, there is a record of the number and tonnage of ships calling at all ports at which there are customs collectors and of all the cargoes that pass through the canals.

## Subsection 1.—Shipping.

Canadian shipping may be divided into three classes: (1) ocean or sea-going shipping; (2) inland or river and lake international shipping (exclusive of ferriage); and (3) coasting trade or coastwise shipping. Ocean shipping covers the sea-going vessels arriving or departing from Atlantic and Pacific Coast ports, including St. Lawrence River ports up to Montreal. Inland international shipping is the term used to cover shipping between Canadian and United States ports on the Great Lakes and international rivers, and on lakes and rivers accessible to shipping from United States ports such as the Ottawa, Rideau, Trent, etc. (Ferriage is, however, excluded from this and other classes of shipping.) Coastwise shipping or the coasting trade covers shipping between one Canadian port and another on the Atlantic Coast, on the Pacific Coast, and on the inland international lakes and rivers or lakes and rivers accessible to them. It does not, however, include shipping on isolated Canadian waterways, such as the Mackenzie River, Lake Winnipeg, Lake St. John, etc.

**Ocean Shipping.**—Canadian ocean shipping dates back to the days of early European fishermen who frequented the shores of Newfoundland and the Maritime Provinces. Shipyards established at Quebec and other points along the St. Lawrence, with later establishments in the Maritime Provinces and on the western coast, have formed the principal bases of Canadian shipping.

Canadian shipping attained some prominence in the days of fast wooden sailing vessels, and also at a later date when steam power first came into use. In 1833, the *Royal William*, a Canadian ship built to ply between Quebec and Halifax, crossed the Atlantic from Pictou to London, and was the first vessel to navigate the Atlantic entirely under steam power. At the present time, in addition to other lines, the Canadian Pacific Railway operates fleets on the Atlantic and Pacific Oceans, and the Dominion Government operates a fleet in the West Indies trade.

The following table has been compiled from the Shipping Reports of the Department of National Revenue for the individual fiscal years 1929-37, and from the Shipping Reports issued by the Transportation Branch of the Dominion Bureau of Statistics for the fiscal years 1938 and 1939.

### 17.—Sea-Going Vessels Entered and Cleared at Canadian Ports with Cargo and in Ballast, Fiscal Years 1929-39.

NOTE.—For the years 1868-1910, see Canada Year Book, 1911, p. 379; for 1911-28 see the 1938 Year Book, p. 698.

<sup>1</sup> Includes freight in both tons weight and tons measurement.

**Inland Shipping.**—Inland shipping is associated in its beginnings with the birch-bark canoe of the American Indian. After the migration of the U.E. Loyalists, the *bateau* and Durham boat came into common use. In the absence at that time of any roads to make land travel possible, the St. Lawrence River and the Great Lakes formed the main highway to the interior. The route from Montreal to the Upper Lakes was broken at three places—from Montreal to Kingston transportation was by *bateau* or Durham boat; from Kingston to Queenston schooners

were used; then, after the portage road from Queenston to Chippawa, the schooner was again taken to the destination.

In 1809, the *Accommodation*, the first Canadian steamship, was built for the Hon. John Molson, to run between Montreal and Quebec. The *Frontenac* was used on Lake Ontario from 1817 on a weekly service between York and Prescott and, following this beginning, there was a period of great activity in lake and river shipping. In 1845, the *Gore* reached Lake Huron by way of the Welland Canal to carry on transport trade on the Upper Lakes, where previously there had not been enough traffic to support a large ship. Shipping on the Upper Lakes became brisker now, for there were settlers to be carried from Buffalo to the western United States and grain to be brought back. In this period Canadian shipping made its profit by carrying United States goods, for there was little traffic originating in the Canadian near-West.

Water-borne traffic did not decrease upon the advent of steam railways, but, on the contrary, increased, and at present the greater part of the western grain is shipped via the Great Lakes route to eastern ports. The iron ore and coal traffic between Lake Superior and Lake Erie is chiefly United States traffic and sometimes exceeds 80 million short tons in a year; the total traffic on these Upper Lakes alone is greater than that carried by all Canadian railways and about one-twelfth of that carried by all United States railways.

**Coasting Trade.**—This form of water-borne traffic has assumed great importance in Canada owing to the long coast lines on the Atlantic and Pacific Oceans and along the Great Lakes and St. Lawrence River system. The movement of grain from Fort William and Port Arthur to Canadian ports on the Lower Lakes and to Montreal is one important factor in coastwise shipping.

**Shipping by Ports.**—In the fiscal year ended Mar. 31, 1939, the tonnage of sea-going vessels arriving at and departing from Vancouver exceeded that of any other port in Canada; Victoria was next, followed by Montreal and Halifax, but in respect to sea-going cargoes loaded and unloaded, Montreal led by a wide margin, followed by Vancouver, Sydney, Saint John, and Halifax. Arrivals only for all shipping are given because, especially in the case of small ports, and owing to the necessity for customs examination, they are more completely reported than departures.

#### 18.—Sea-Going Vessels Entered and Cleared and All Vessels (Exclusive of Ferriage) Entered at each Principal Canadian Port, Fiscal Year 1939.

NOTE.—For details of coastwise and inland international shipping at these ports and at all other ports of Canada, see the Shipping Report of the Dominion Bureau of Statistics for 1939.

**Grand Total Shipping Trade.**—Both sea-going and coastwise shipping have shown marked expansion since 1923, although the effect of the depression is evident here also. It is noteworthy that the volume of coastwise shipping is the greatest, while sea-going is next in tonnage. Inland international shipping has varied considerably and showed a more definite decrease during the depression. The ferry between Sarnia, Ontario, and Port Huron, Michigan, making 19,167 round trips with a cumulative registered tonnage of 2,148,656 tons in and the same out, was excluded for the first time in 1938. This ferry was displaced by a bridge in 1938-39.

**19.—All Vessels (Exclusive of Ferriage) Entered and Cleared at Canadian Ports, 1929-39, With Details by Provinces for the Fiscal Year 1939.**

NOTE.—Totals for the years 1923-28 will be found at p. 702 of the 1938 Year Book.

<sup>1</sup> The Ontario figures and the totals for "Inland International" and "Total Shipping" are inclusive of ferriage at Sarnia amounting in each case of "Arrived" and "Departed" to: 13,180 vessels and 1,415,612 tons for 1934; 13,444 vessels and 1,433,031 tons for 1935; 14,583 vessels and 1,620,820 tons for 1936; and 15,217 vessels and 1,678,272 tons for 1937. Corresponding deductions for earlier years are not available. <sup>2</sup> Ferry at Sarnia was discontinued in 1938. See footnote 1.

## Subsection 2.—Canal Traffic.

Since the canals of Canada are open to the vessels and traffic of all nations upon equal terms, United States traffic constitutes an important part of the total carried through certain canals, especially the Welland Ship Canal. This is shown in Tables 20 and 23. More complete details of the traffic through canals may be found in the annual report "Canal Statistics" published by the Dominion Bureau of Statistics.

## 20.—Traffic Through Canadian Canals, by Nationality of Vessels and Origin of Freight, Navigation Seasons 1929-39.

NOTE.—Figures include duplications where cargoes use two or more canals. For Canadian canal traffic from 1886-99, see the 1902 Year Book, p. 398; for the figures of 1900-10, the 1933 Year Book, p. 697; and for 1911-28, p. 703 of the 1938 edition.

<sup>1</sup> Figures include a small percentage of ports of other foreign countries.<sup>2</sup> Revised since the publication of the 1939 Year Book.

The figures in Tables 20-23 include duplications where the same freight passes through two or more canals, but in Table 24 duplications in the traffic passing through the St. Lawrence and Welland Ship Canals and the Canadian Lock at Sault Ste. Marie, which amounted to 5,494,242 tons, have been eliminated.

Grain transhipped at Georgian Bay, Laké Erie, or other ports above Montreal is treated as new cargo and as most of this grain has passed through either the Canadian or United States lock at Sault Ste. Marie there are still duplications in the data because of this treatment. These duplications cannot be avoided when net totals for the Canadian canals are computed because it is impossible to ascertain which lock at Sault Ste. Marie was used by the grain reloaded at Port Colborne or other transhipping port.

**The Panama Canal.\***—The Panama Canal, which was opened to commercial traffic on Aug. 15, 1914, is a waterway of great importance to British Columbian ports, from which vessels leave direct for British and European ports throughout the year. As an alternative route to that of the transcontinental railway lines, such a passage by water is of vital importance in the solution of the larger transportation problems of the continent, and while its influence is perhaps more potential than actual, such a check on transcontinental rail rates is a valuable one. During the War of 1914-18 the great expectations based upon the opening of the Canal were not realized, owing to the scarcity of shipping, but, with the post-war decline in ocean freight rates, an increase in traffic between Canada's Pacific ports and Europe has taken place, and, while the proportion carried in vessels of Canadian registry is comparatively small, the cargo tonnage has nevertheless assumed considerable proportions.

The greater importance of the route as one from Pacific to Atlantic ports is illustrated by the much larger volume of freight originating at western ports than at eastern ports, and the larger volume destined for eastern than for western Canadian ports. Strictly inter-coastal Canadian cargo during the latest year aggregated 103,291 long tons as compared with 82,798 long tons in 1938.

\* Revised and figures supplied by courtesy of the Governor of the Panama Canal Zone.

With respect to total traffic through the Canal by nationality of vessel and cargo carried, vessels of United States registration carried 9,909,380 tons, or 35·6 p.c. of the total cargo of 27,866,627 tons loaded through in the year ended June 30, 1939. British vessels carried 6,801,556 tons, or 24·4 p.c.; Norwegian vessels 3,408,078 tons, or 12·2 p.c.; Japanese vessels 1,710,303 tons, or 6·1 p.c.; and German vessels 1,468,996 tons, or 5·3 p.c.

### Subsection 3.—Harbour Traffic.

The freight movement through a large port takes a number of different forms. The overseas movement, i.e., the freight loaded into or unloaded from sea-going vessels, frequently constitutes a surprisingly small part of the total. Usually the volume coming in and going out by coastwise vessels is larger. Then there is the 'in transit' movement in vessels that pass through the harbour without loading or unloading. Finally there is the movement from one point to another within the harbour, which in many ports amounts to a large volume. It is not possible to obtain statistics of the total freight handled in all the ports and harbours of Canada, as many of them are small, and without the staff necessary to obtain a detailed record of freight handled. However, the cargo of sea-going vessels loaded and unloaded is shown for the principal ports, for the provinces, and for Canada, in

Table 18. Similar statistics of cargo carried by vessels in coastwise and inland international shipping are not available. The National Harbours Board now reports annually the water-borne cargo loaded and unloaded at the eight ports under its control. Six of these are among the principal ports of Canada and the cargo handled in each is shown in Table 27. The classification is the same as for railway freight (Table 21, pp. 654-655) and canal traffic (Table 22, p. 697). The figures include freight carried by coastwise and inland international, as well as by sea-going shipping. The total of sea-going cargo is shown for these same ports in Table 18, and the difference would be largely coastwise for these particular ports. The figures for each port include all cargo loaded or unloaded whether by facilities under the Board or at private docks and terminals in these ports. Cross-harbour movements and bunkering are excluded.

## PART V.—AIR NAVIGATION.\*

The treatment of air navigation in this Part of the Year Book is confined to civil aviation; the military activities and organizations fall more properly under the subject of National Defence (see "Air Service" in the Index).

Aircraft furnish a rapid and convenient means of transportation for passengers and goods particularly in remote and unsettled areas where transportation otherwise is slow and very costly. Similarly, aircraft have provided a relatively cheap and feasible means of obtaining information for the development and conservation of natural resources in many parts of Canada where the cost by other means would be prohibitive. Air-mail and air-transportation lines and commercial services are increasing steadily in number and in the scope of their operations and usefulness.

### Section 1.—History and Administration.

#### Subsection 1.—Development of Aviation in Canada.

**Historical Sketch.**—A brief historical outline of the development of aviation in Canada appears at pp. 710-712 of the 1938 Year Book.

### THE TRANS-CANADA AIRWAY.

**Modern Airway Facilities.**—The term 'airway' may be defined as the path of flight between two terminal airports on which have been installed permanent aids to air navigation. In North America a standard system of aids to air navigation has gradually been evolved. This has been closely adhered to in the construction and equipment of the Trans-Canada Airway, and some of the most important characteristics should be mentioned. Efficient weather and radio services are essential features. Terminal airports, where regular stops are made, should be all-way and all-weather fields, with three or more hard-surfaced runways, at least 3,000 feet in length; they should be fully lighted with electric airway beacons, floodlights, boundary lighting systems to define the runways, range and approach lights to indicate the path of flight to the paved landing strips, and obstruction lights to define obstacles that might interfere with the clear approach to the airport. At a distance of about three miles there should be a radio-beam station, by means of which the pilot is guided along the airway and brought directly over the airport at the proper altitude for landing.

A meteorological service is essential to every main airport. By means of two-way radio, aeroplanes in flight are given, every thirty minutes, the latest information on the weather, are controlled during their flight, given full information as to other aeroplanes flying in their vicinity, and advised when to land.

Present practice requires radio-beam and two-way communication stations along the airway at intervals of about 100 miles between the terminal airports. Adjacent to these and directly in the path of flight secondary aerodromes are constructed. These are not necessarily stopping points but they afford safe landing in case of need. The number of additional intermediate aerodromes considered necessary for safety varies with the type of country. In open, settled, farm lands, where there are no mountains and where the weather is normally fine, they may be dispensed with altogether or spaced at intervals of about 100 miles between the

\* Descriptive and administrative information has been prepared from material supplied by J. A. Wilson, Controller of Civil Aviation, Department of Transport, while statistics have been compiled by G. S. Wong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics.

major airports. Owing to the nature of the climate and the difficult physical character of the terrain in the Rocky Mountain region and in northern Ontario, where there are absolutely no alternative emergency landing places, the spacing is somewhat closer. All important communities in Canada not on the line of the Trans-Canada Airway are being connected with it by branches and arrangements for exchange of international traffic with the airway system of the United States at cities near the border are being perfected.

**Construction and Operations.**—Natural conditions divide the Trans-Canada Airway into four distinct regions—the Mountain Region, from the Pacific Coast to the foothills in Alberta; the Prairie Region, stretching from the foothills to the Ontario boundary; the Laurentian Area, extending through western Ontario as far as the Ottawa Valley; and the Atlantic Section, which takes in the settled areas in the Basin of the Great Lakes, the Eastern Townships of Quebec, and the Maritimes.

The Prairie Region obviously presented the simplest construction and operating problems. There, precipitation is light, visibility normally good, contour changes are gradual, and aerodrome sites requiring little development were obtainable everywhere. Airway surveys commenced on the prairie section in the summer of 1928, and aerodrome construction and lighting installation followed. By the end of 1929, a chain of lighted aerodromes from Winnipeg to Edmonton via Regina and Calgary had been prepared and a contract for the carriage of mails had been let to Canadian Airways by the Post Office Department. Actual flying operations started on Mar. 1, 1930, with the operation of a nightly service each way. Five radio-beam stations, constructed in 1931, increased the efficiency of the airway materially. This service continued in regular operation with satisfactory results until Mar. 31, 1932, when, for reasons of economy in all services, it was temporarily suspended. Although the operation of the trans-prairie service was stopped, the airway surveys then in hand in the mountains and in northern Ontario, Quebec, and the Maritime Provinces were continued with a view to the eventual completion of the system from coast to coast.

The necessity for finding useful employment for many single homeless men in all parts of the country led to the establishment of aerodrome construction camps in the Rocky Mountain section, and in northern Ontario, Quebec, and the Maritime Provinces. These resulted in much valuable work being performed, and the system was continued to June 30, 1936, when all labour camps were shut down and the construction work was continued either by contract or by day labour.

An Act creating a national operating company—Trans-Canada Air Lines—for the operation of the trans-Canada system was passed by Parliament in 1937, and in July and August of that year a joint survey was made by the staff of the operating company and the Department of Transport to decide on the air navigation facilities required to complete the airway. The increase in landing speed and the introduction of night and all-weather flying necessitated larger airports with longer clear approaches and improved surfaces. Facilities that had been adequate five years before no longer sufficed. The construction and installation of the necessary radio-range stations, the enlargement of the airports, and installation of the airway lighting system was put in hand in September, 1937, and has been prosecuted with energy since that date. Work was further advanced in the Western section; activities were concentrated there to bring it into operation as soon as possible. In the meantime, the Trans-Canada Air Lines were organizing and training their flying and ground crews, obtaining the necessary aircraft, and building hangars and workshops essential to the operation of the airway.

On Jan. 1, 1938, all this work was far enough advanced to permit commencement of experimental flying on a daylight schedule between Vancouver and Winnipeg. The results of these experimental flights proved so satisfactory that, on Mar. 4, a beginning was made in carrying mails experimentally between Vancouver and Winnipeg. By Oct. 1 the erection of the remaining radio stations and the installation of teletype, two-way wireless service, meteorological service, the improvement of the airports, and lighting of the route for night operations were completed and a regular air-mail service was formally inaugurated on that date over this portion of the route. The northern connection to Edmonton from Lethbridge was also opened at the same time, though until the new and larger airport at Calgary is finished no stop can be made there.

The erection of the wireless stations between Winnipeg and Montreal was, in the meantime, proceeding rapidly. The completion of the airports and the installation of the lighting was commenced in northern Ontario as soon as weather conditions permitted. Delivery of the ten "Lockheed 14" aircraft purchased for the operation of the main line was completed during September, and the construction work was so well advanced that regular daily flights on schedule were inaugurated for the training of personnel, both flying and ground, on this section of the route on Sept. 10. An express service between Montreal, Toronto, and Vancouver was inaugurated on Oct. 17. By Dec. 1, the construction and equipment of the airway was sufficiently advanced to justify the inauguration of a daily air-mail service between Montreal and Vancouver and this commenced on that date.

During 1939, the work of construction of the last section of the airway from Montreal to the Atlantic Coast was completed. The main airports in this eastern section are located at Megantic, Que., Blissville, N.B., and the eastern terminal at Moncton, N.B., with intermediate aerodromes at Havelock, N.B., and Windsor Mills, Que. Facilities for connecting lines from Halifax and Saint John to Moncton have been provided by enlarging and improving the municipal airports of these cities, and a new airport has been constructed at Charlottetown, P.E.I. Radio range stations are being installed at Halifax and Charlottetown.

The Trans-Canada Air Lines commenced a mail service between Montreal and Moncton on Nov. 1, 1939, and, three months later, passenger, mail, and express services were in full operation, thus adding the last link to the transcontinental service.

The Department of Transport has provided for assistance to municipalities desiring to construct or improve existing airports. Thirty-two cities have taken advantage of this offer, including most of the larger centres of population. Sixty-five commercial air-transport companies providing services to districts in northern Canada have played a large part in the transportation system. New discoveries in northern Saskatchewan and the Northwest Territories have resulted in increased activities in these areas in the carriage of mail, passengers, and freight.

Clubs and schools have been active in instituting training courses in flying and many young Canadians are entering this field as pilots, air engineers, and radio operators. To meet the need for specialized education called for by modern flying, the University of Toronto has instituted a two-year diploma course in air navigation whereby students may gain the theoretical knowledge necessary to equip them for a career in aviation.

#### TRANSATLANTIC AIR SERVICE.

The past decade has witnessed the creation of a world-wide system of communications by air. European air lines cover that continent with a network connecting

all the principal centres and stretching out to the farthest confines of Africa, Asia, and Australasia. In North America, the United States airway system provides a similar network and has been extended to give rapid means of transportation to all points in Central and South America. The Pacific Ocean has been spanned and South America linked with Europe. The only major trade route not yet regularly served by aircraft is the North Atlantic. This trade route is perhaps the most important in the world. It joins the greatest centres of population and industry of the Old and New Worlds. It is served by the most efficient transport and communication systems in the world and here, if anywhere, is to be found traffic of sufficient value and quantity to justify the establishment of a commercial air service. The great circle track, or shortest route joining these two great industrial districts, passes down the Rhine Valley, through northern France and Belgium, London, Northern Ireland, the Straits of Belle Isle, Montreal, the Valley of the St. Lawrence, and thence to the Mississippi basin. The eastern and western terminals of the direct transatlantic airway lie in the British Commonwealth and from the earliest days of aviation Canadian Governments have watched its development with growing interest. The length of the ocean crossing and the climatic difficulties have delayed the establishment of any regular service by this route, but, with the advance of aeronautical and radio science and meteorological services, these are being conquered.

At the invitation of the Government of Newfoundland, representatives of the Canadian and United Kingdom Governments visited St. John's, Newfoundland, in July, 1933, for a conference on transatlantic flying. This conference was also attended by representatives of Imperial Airways and Pan American Airways. The result of this conference was close co-operation between the three Governments in certain preliminary surveys and meteorological studies.

An agreement for co-operation in the establishment of the transatlantic air service by the Governments of Canada, the United Kingdom, Ireland (Eire) and Newfoundland was reached by representatives of these Governments in Ottawa in December, 1935. Since the friendly co-operation of United States interests, rather than the institution of a rival service, was highly desirable, the representatives of the Commonwealth Governments then proceeded to Washington and an agreement was reached with representatives of the United States Government for their co-operation in the institution of a regular transatlantic air-mail, passenger, and express service. The practical results of these two conferences were the trial flights made by aircraft of Imperial Airways and Pan American Airways during the summer of 1937. Flying boats were used by both companies. Imperial Airways operated two of the new 'Empire' type, high-wing monoplane boats, while Pan American Airways used the 'Clipper' flying boat, a type that had been successfully flown on their transpacific service.

In 1938 there was little activity on the transatlantic air service owing to the necessity of building new flying boats embodying the lessons learned during the 1937 operations. The only transatlantic flight made by the northern route during the year was made by the *Mercury*, the upper component of the interesting Short-Mayo composite aircraft. This seaplane, carrying 1,000 lb. of express matter, was launched by her mother ship the *Maia* near Foynes at 20:00 hrs. (B.S.T.) July 21 and proceeded non-stop to Montreal landing at 16:20 hrs. (B.S.T.) July 22, refuelling there and going on to New York. The *Mercury* made the return flight by easy stages via Montreal, Botwood, the Azores, and Lisbon to Southampton.

During the year 1939, experimental flights were continued. A weekly service was inaugurated by Imperial Airways, Limited, between Southampton and New

York on Aug. 5, and continued until the end of September. Eight successful round trips were completed.

Soon after the outbreak of war, the Pan American Airways discontinued their transatlantic service on the northern and southern routes, to Shannon and Lisbon, respectively. The last east-bound journey by Pan American Airways was made when the *Yankee Clipper* reached Shannon on Oct. 5.

The transatlantic services were operated in co-operation with the Governments of the United Kingdom, the Dominion of Canada, Ireland (Eire), and Newfoundland. In this way, the necessary provisions were made for communication and meteorological services and for the equipping of airports and the general facilities necessary in the carrying out of experiments and the conducting of these services.

### Subsection 2.—Administration.

Civil aviation, previously administered by the Department of National Defence, is now a function of the Department of Transport, created in November, 1936.

In 1938, Parliament passed the Transport Act (c. 53 of the Statutes) enlarging the jurisdiction of the former Board of Railway Commissioners to include the regulation of air transport and certain classes of water transport. The Board of Transport Commissioners is co-operating with the Civil Aviation Branch in the regulation of air services so as to stabilize the industry by preventing destructive competition, and to ensure a higher standard of safety and efficiency in the operation of all regular air services in the Dominion. Licences for air routes are under the control of the Board and they also have the power to pass on the tariffs charged for the carriage of passengers or goods by aircraft.

The administrative duties under the Controller of Civil Aviation include the inspection and registration of aircraft and air harbours, the licensing of commercial and private air pilots, air engineers, and air navigators. In addition to these duties, the location and construction of air routes and any matters connected with airship services are administered by this Branch.

The Dominion Government since 1928 has encouraged flying training through the Light Aeroplane Clubs. These Clubs have been subsidized by the loan of aircraft and by the paying of cash grants to the Clubs for students who succeed in passing the standard examinations and tests set by the Department of Transport.

There are 22 clubs, viz., Halifax, Cape Breton, Saint John, Montreal, Brant-Norfolk, Fort William, Hamilton, Kingston, London, Ottawa, St. Catharines, Toronto, Border Cities, Kitchener, Brandon, Winnipeg, Moose Jaw, Regina, Saskatoon, Calgary, Edmonton, and Vancouver. Details of membership, aircraft, hangars, flights, etc., of flying clubs are shown separately in the tables.

Since the outbreak of war the Light Aeroplane Clubs have been co-operating with the R.C.A.F. in the carrying out of elementary flying training for those who wish to enter the R.C.A.F. as pilots.

**Royal Canadian Mounted Police.**—Since the Royal Canadian Mounted Police took over the duties of the Preventive Service in 1932, aircraft have been utilized in the work on a wide scale. Most of the patrol work by aeroplane took place on the Atlantic seaboard and the Gulf of St. Lawrence. Upon the outbreak of war in September, 1939, the aeroplanes and personnel of the Aviation Section of the Royal Canadian Mounted Police were placed at the disposal of the Royal Canadian Air Force for the duration of hostilities.

**Provincial Government Operations.**—The Ontario Provincial Air Service owns 26 aircraft, which are operated by the Province in the work of forest fire protection, transportation, and air photography in northern Ontario. In 1939, the Manitoba Government Air Service operated 4 aircraft on forest protection in the Province for the Forestry Branch. The Department of Lands and Mines of New Brunswick also operated one aircraft during 1939. Work requiring the use of aircraft was carried out in other provinces by commercial operators on contract with the Provincial Governments concerned.

**Commercial Aviation.**—During 1939 the principal activity of commercial aircraft operators in Canada was the carriage by air of passengers, freight, and mails to mining fields in the more remote parts of the Dominion. Their work also included forest fire patrols, timber cruising, air photography, flying instruction, advertising, short passenger flights, etc., in various parts of the country.

**Air-Mail Services.**—Regular air-mail services were established in December, 1927. Statistics of the air-mail services, showing routes operated, mileage flown, and mail carried during the fiscal year ended Mar. 31, 1939, will be found in Table 6, p. 739, under the Part of this chapter dealing with the Post Office.

## Section 2.—Airports and Aircraft.

### Subsection 1.—Summary Statistics of Civil Aviation.

The collection and compilation of statistics of civil aviation was transferred from the Branch of the Controller of Civil Aviation to the Bureau of Statistics in 1936. To preserve continuity with aviation statistics published in previous Year Books, a statistical summary of civil aviation for the years 1933 to 1938 is given below in Table 1. The statistics collected since 1936 have been somewhat enlarged and consequently no comparisons with similar data for previous years can be made for items appearing in other tables of this Part.

#### 1.—Summary Statistics of Civil Aviation in Canada, 1933-38.

NOTE.—Figures for 1921-23 may be found at p. 616 of the 1924 edition of the Year Book, for 1924-29 at p. 661 of the 1930 edition, and for 1930-32 at p. 698 of the 1936 Year Book.

## Subsection 2.—Ground Facilities.

The nucleus of the chain of aerodromes and ground facilities mentioned below, which will constitute the trans-Canada airway, consists of municipal or flying-club airports adjacent to the larger urban centres. There are also numerous terminals from which commercial flying services operate, chiefly into the northerly mining regions.

A large air terminal has been built at St. Hubert, seven miles south of Montreal. Immigration, customs, and postal facilities are available. An aerodrome has also been constructed at Rimouski to expedite the dispatch and reception of transatlantic mails.

## Subsection 3.—Aircraft.

**The Manufacture of Aircraft.**—The construction in Canada of aircraft and equipment required for aviation is essential to the development of flying. Canadian Vickers was the pioneer firm. Several manufacturers are now producing original types especially suited to operation in Canada, and a number of manufacturers from England and the United States have formed branches in Canada for the assembly and servicing of their products. There are also a number of plants for the manufacture of landing gear, especially skis and pontoons, designed to meet the particular requirements of Canadian conditions.

The principal statistics of the aircraft industry, i.e., those establishments for which aircraft or parts are the chief product, are shown for the latest available year in the Manufactures chapter (Table 9, p. 416). There are also firms principally engaged in the manufacture of other goods that produce aircraft as well. The total aircraft produced in Canada in recent years was as follows: 18 valued at \$117,689 in 1934; 58 at \$479,614 in 1935; 109 at \$1,210,910 in 1936; 110 at \$1,461,626 in 1937; and 160 valued at \$3,336,689 in 1938. During 1938, 48 aircraft valued at \$2,883,059, and 296 aeroplane engines valued at \$1,602,840 were imported, almost entirely from the United Kingdom and the United States.

## 3.—Licensed Civil Aircraft in Canada, as at Dec. 31, 1938.

### Section 4.—Traffic.

The freight carried by aircraft consists largely of machinery, supplies, etc., for mines in the northern part of Quebec, Ontario, the western provinces, and the Northwest Territories. Many of these mines are accessible only by canoe in the summer and dog team in the winter or by aircraft, and aircraft transportation will probably be the cheapest and most effective method of transportation during the life of a large number of them. The amount of freight and express carried by aircraft has grown steadily and rapidly, increasing from 2,372,467 pounds in 1931 to 21,704,587 pounds in 1938. This is considerably more than was carried in any other country, with the possible exception of Russia; the United States reported 7,336,000 pounds for 1938. The activity in mining, particularly in gold mining due to the increased price of gold, has been a large factor in this rapid growth of air transportation of freight and express. Much mail, not included in the mail carried under contract, is also carried into the mines by aircraft. Further information regarding air-mail services appears under Part VIII of this chapter dealing with the Post Office at p. 738.

<sup>1</sup> Flights between Canada and the United States.<sup>2</sup> From point to point only.<sup>3</sup> Includes

student passengers.

<sup>4</sup> Carried under Canadian postal contracts, 1937—1,323,584 lb., 1938—1,771,153 lb.<sup>5</sup> Exclusive of 23,500 square miles by National Defence aircraft.<sup>6</sup> Includes surveys by National

Defence aircraft.

<sup>7</sup> Exclusive of 56,500 square miles by National Defence aircraft.

Some countries include in their statistics traffic between two foreign stations of companies incorporated in the reporting country. In Table 8 statistics of companies operating regular routes between points in Canada and the United States are shown separately. These statistics include only those of traffic between the two countries. The company operating between Montreal, Albany, and New York reported only the flights, passengers, and freight, etc., from and to Montreal. Consequently, it would be quite proper to add this international traffic to the strictly Canadian traffic.

The Northern Airways Company has a postal contract for mail in the north-west to be carried by any means feasible and on this contract 50,731 pounds not included in the official air-mail contracts were carried by aeroplane in 1938.

## PART VI.—WIRE COMMUNICATIONS.\*

The statistics regarding communication by wire are classified under two sections, viz., telegraphs and telephones.

## Section 1.—Telegraphs.

The early history of telegraphic communication in Canada is given at p. 778 of the 1934-35 Year Book.

**Dominion Government Telegraph Service.**—This service is operated by the Telegraph Branch of the Department of Public Works. Its general object has been to furnish wire communications for outlying and sparsely settled districts where the amount of business is so small that commercial companies will not enter the field but where the public interests require that there should be communication. Thus these facilities include: telegraph and telephone services to scattered settlements around the coast of Cape Breton Island; cable services to Campobello, Grand Manan, and other islands in the Bay of Fundy, to Prince Edward Island, Magdalen Islands, and Anticosti Island in the Gulf of St. Lawrence; telegraph or telephone services along the north shore of the Gulf of St. Lawrence from Quebec to the Straits of Belle Isle; cable connections with Pelee and Manitoulin Islands in Ontario; some lines to northern outlying districts in Saskatchewan; lines from Edmonton to the Athabaska and Peace River country in Alberta; telegraph or telephone communications around the coast of Vancouver Island and to fishing, lumbering, and mining settlements along the coast of the mainland of British Columbia, as well as to isolated mining centres in the interior; and finally the overland telegraph line to Dawson and other settlements in Yukon.

**Telegraph Systems.**—The Canadian telegraph systems are composed of lines owned by the Dominion Government and by chartered railway and telegraph companies. The Canadian facilities, in proportion to population, are among the most extensive in the world, and are operated under great climatic and geographical disadvantages. In the operation of railways and in the receipt and dispatch of market and press reports, the service to the nation is invaluable.

\* Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. This Branch issues annual reports dealing with telegraph and telephone statistics.

<sup>1</sup> Cablegrams not included.

<sup>2</sup> The figures for Table 1 include offices of wireless and cable companies and to that extent are larger than the sums of the items given here for corresponding years.

<sup>3</sup> Includes sub-offices.

<sup>4</sup> Included with Canadian National. Western Union handles only through business.

<sup>5</sup> Leased telephone line.

**Submarine Cables.**—Sixteen transoceanic cables have termini in Canada—fourteen of them on the Atlantic Coast and two on the Pacific. In addition, there are eight cables between Atlantic coastal stations in Canada and the United States. The year in which the cable was first demonstrated to be of commercial value was 1866, and up to the present its use has greatly increased. The Atlantic cables are controlled by English and United States interests. The Pacific cable, from Canada to Australia and New Zealand, has been in operation since 1902, and was owned by a partnership of the Governments of Great Britain, New Zealand, Australia, and Canada. As a result of the recommendation of the Imperial Wireless and Cable Conference of 1928, in view of increased wireless competition, it was decided to dispose of the Pacific and West Indian Islands cable systems to the Imperial and International Communication Co., a company formed to take over all Empire-owned cables and lease the Empire-owned beam wireless systems. The necessary legislation was passed by the United Kingdom in February, 1929, and by Canada in June, 1929.

## Section 2.—Telephones.

A brief historical account of the early development of telephones in Canada appears at p. 781 of the 1934-35 Year Book.

### Subsection 1.—Systems and Equipment.

**Telephone Systems.**—The 3,203 telephone systems existing in 1938 included the three large Provincial systems in Manitoba, Saskatchewan, and Alberta, and a smaller governmental system in Ontario, together with the system operated by the National Parks of Canada, Department of Mines and Resources. There were also 143 municipal systems, the largest operated by the Cities of Edmonton, Fort William, and Port Arthur. Out of the 2,259 co-operative telephone companies, no fewer than 1,151 were in Saskatchewan alone, 774 in Alberta, and 211 in Nova Scotia. The largest among the 551 stock companies operating telephone systems in 1938 were the Bell Telephone Co., and the British Columbia Telephone Co. Over 58 p.c. of the total telephone investment in Canada belongs to the Bell Telephone Co., and their telephones in Quebec and Ontario constitute 56 p.c. of the total for Canada.

**Telephone Equipment.**—In telephones per hundred population Canada is second only to the United States, the figures being 15·09 telephones per 100 population in the United States in 1938 and 12·13 in Canada. This is a favourable showing in view of the low density of population in Canada as a whole and the fact that 46 p.c. (46·30 p.c. in 1931) of the population is rural.

There were 617,727 telephones out of a total of 891,707 in 51 leading cities of Canada operated from automatic switchboards; the remainder, or 273,980, were operated from manual switchboards. Automatic switchboards have completely displaced manual switchboards in the principal cities of the Prairie Provinces and are displacing them in the other provinces.

### 3.—Mileages of Pole Line and Wire, and Telephones in Use Classified by Business, Residential, Rural, and Public Pay, as at Dec. 31, 1929-38.

NOTE.—Figures for the years 1911-28 will be found at p. 724 of the 1938 Year Book.

<sup>1</sup> Includes telephones on rural exchange lines and urban exchange lines that have more than four parties.

The density of telephones in the different provinces is naturally influenced by the urbanization of the population because the number of telephones used for business purposes is much greater in cities and towns than in rural areas.

#### Subsection 2.—Telephone Finances.

The importance of the telephone industry in Canada is shown by the statistics of Table 5. After experiencing a setback during the depression, the industry has shown continued growth during recent years and in 1938 the total property account amounted to almost \$350,000,000, and the payroll to over \$26,000,000.

## Subsection 3.—Telephone Calls.

Systems operating almost 90 p.c. of all telephones in Canada made estimates by actual count on days of normal business, and, after adjusting for uncompleted calls, holidays, Sundays, etc., the average was multiplied by 365. The long-distance calls in practically all cases were the actual long-distance calls put through or completed. The averages were 1,907 local and 22.3 long-distance calls per telephone and 234 telephone conversations per capita. The estimated per capita average for the United States in 1937 was 220.

## 7.—Local and Long-Distance Calls and Averages per Telephone and per Capita, 1929-38.

<sup>1</sup> Per capita figures are based on official estimates of population given on p. 103.

## PART VII.—RADIO COMMUNICATIONS.

Prior to July 1, 1938, radio in Canada, and in ships registered in Canada, was administered under the provisions of the Radiotelegraph Act passed in 1913, and the Regulations issued thereunder from time to time. This Act, owing to the rapid development of radio during the intervening years, was repealed and replaced by the Radio Act, 1938, which became effective on July 1, 1938.

In the interim, however, the Canada Shipping Act had already been revised (see 1936 Year Book, pp. 1107-1108), and those sections of the former Radiotelegraph Act pertaining to radio equipment in ships had been deleted and embodied in the revised Canada Shipping Act, 1934.

In 1932, the Canadian Radio Broadcasting Act was passed and under its terms control of all radio broadcasting was vested in the Canadian Radio Broadcasting Commission. This Act was subsequently repealed and replaced by the Canadian Broadcasting Act, 1936. Under the new Act, the technical control of all broadcasting stations reverted to the Department of Transport, while the regulation of programs was placed in the hands of the Canadian Broadcasting Corporation; the Minister of Transport is also empowered to make regulations for the control of any equipment liable to cause interference with radio reception.

Accordingly, authority for the administration of all radio within the jurisdiction of Canada is vested in the Minister of Transport under the following legislation: The Radio Act, 1938; The Canada Shipping Act, 1934; and The Canadian Broadcasting Act, 1936.

## Section 1.—Administration.

### Subsection 1.—Technical Control and Licensing.

All radio stations within the Dominion of Canada are required to be licensed, whether used for transmission or reception, or both. The issuance of all classes of licences, the assignment of call signs and frequencies, and the inspection and monitoring of radio stations in Canada is carried out by the personnel of the Radio Division. This Division and the Civil Aviation and Meteorological Divisions form the Air Services Branch of the Department of Transport.

In addition to being subject to the provisions of the Radio Act, 1938, and the regulations issued thereunder, the operation of radio, including broadcasting, in Canada is subject to the International Telecommunication Convention (Madrid, 1932) and the Radiocommunication Regulations annexed thereto (Revision of Cairo, 1938), as well as to those of the Inter-American Radio Convention, Havana, 1937.

The Radio Regulations for ship stations issued under the Canada Shipping Act, 1934, lay down the specifications of radio equipment to be carried on certain classes of vessels, and also designate the qualifications of the operators required to be carried thereon.

To ensure the safety of life at sea, certain passenger steamers and cargo vessels, by international regulation, must carry radio equipment manned by competent operators holding certificates of proficiency in radio. The Department maintains a complete radio inspection service to enforce this regulation. Inspectors, located at major ports throughout the Dominion, are responsible for checking the efficiency of the radio equipment on ships calling at Canadian ports, regardless of their nationality, and for seeing that only competent operators are carried. Under the Safety of Life at Sea and Load Line Conventions Act, 1931, ships of foreign and Canadian registry, while in Canadian ports, are surveyed with a view to the issuance of safety certificates. There were 94,113 radio stations of all classes inspected by departmental radio inspectors during the year.

Examinations for certificates of proficiency in radio are also conducted by the inspection staff of the Radio Division. Certificates of all classes to the number of 8,783 were issued up to Mar. 31, 1939.

<sup>1</sup> Includes licences issued free; see footnote 4, Table 1.

There are two classes of private receiving-station licences, one for battery operated receivers (fee \$2 per annum), and the other for electrically operated receivers (fee \$2.50 per annum). Free licences are issued for crystal sets and to blind persons, schools, hospitals, and charitable institutions.

Exact figures of revenue received from private receiving sets are not available by provinces. This is due to the fact that there are two kinds of licence, as stated above, and also because commissions paid for the issuance of licences vary according to the classification of the issuer, that is, post offices, radio dealers, house-to-house vendors, etc. In Table 3, therefore, total revenue received from the sale of private receiving-set licences is prorated according to the number of licences issued in each province.

### 3.—Revenue from Private Receiving-Station Licences Issued in Canada, by Provinces, Fiscal Years 1933-39.

NOTE.—The figures in this table are approximations only: see text above.

This revenue is collected by the Department of Transport and is turned over to the Canadian Broadcasting Corporation in accordance with the provisions of Sect. 14 of the Canadian Broadcasting Act, 1938, which provides as follows: "The Minister of Finance shall deposit from time to time in the Bank of Canada or in a chartered bank to be designated by him to the credit of the Corporation . . . the moneys received from licence fees in respect of private receiving licences and private station broadcasting licences, after deducting from the gross receipts the cost of collection and administration, such costs being determined by the Minister from time to time".

#### Subsection 2.—Investigation and Suppression of Inductive Interference.

Thirty-eight cars are equipped with sensitive apparatus for the investigation of interference to radio reception, and operate from permanent inspection offices located in 22 cities across the Dominion. The inspectors in charge of these cars interview broadcast listeners who have reported interference, and determine the actual source. Tests are then made to ascertain whether or not the interference can be suppressed effectively and economically. The owners of the interfering apparatus are advised of the results of the tests carried out and are given full information regarding the most effective means of suppressing or eliminating the interference. Thirty-two part-time inspectors located in other cities and towns are supplied with portable receivers and a limited amount of equipment for the investigation of interference in their districts.

**Section 2.—Operation of Radio Communications.****Subsection 1.—Dominion Government Radio Stations.**

Radio communication facilities of several different types are essential for the safe and accurate navigation of ships and aircraft, and, in order to meet the requirements of Canadian as well as foreign ships plying Canadian waters and aircraft flying over Canadian territory, the Department of Transport has established networks of direction-finding, marine radio beacon, aviation radio range, radiotelegraph, and radiotelephone stations.

**Department of Transport, Marine Service.**—Four distinct networks of stations provide a complete radio aids-to-navigation service for ships. These networks serve the following areas: Great Lakes; Gulf of St. Lawrence and Atlantic Coast; Hudson Bay, Strait, and sub-Arctic; and Pacific Coast. The first three networks are interlocking. There is, however, no direct radio connection between the Pacific Coast network and the networks in Eastern Canada and the sub-Arctic, although contact is maintained between a short-wave station operated by the Department of Transport at Ottawa and the Pacific Coast and Hudson Bay and Strait systems.

During the fiscal year 1938-39, Government radiotelegraph stations on the East Coast, West Coast, the Great Lakes, and Hudson Bay and Strait handled 419,912 messages or 8,643,173 words, compared with 393,911 messages or 8,101,848 words handled during 1937-38. For 1938-39 the cost of maintenance was \$530,017 compared with \$503,025 in the previous year.

reporting station (see Table 5).

<sup>2</sup> Primarily a meteorological reporting station.

**Department of Transport, Aeronautical Service.**—The radio services provided for aviation may be divided into two categories: first, those furnished on behalf of aircraft flying trans-Canada routes; and secondly, those intended for aircraft flying transatlantic routes. This phase of radio in Canada is being rapidly developed and it is expected that within a very short time aircraft pilots will be provided with as complete a service as is, at the present time, supplied to marine navigators. This service will include the completion of a chain of radio range stations extending from coast to coast along the trans-Canada airway and on important connecting routes. These stations are located at airports approximately every 100 miles and transmit signals that enable pilots to navigate entirely by instruments. Routine weather reports are also broadcast hourly.

<sup>1</sup> Two additional stations on this route are under construction in New Brunswick, located at Blissville and Moncton.

**Department of National Defence.**—The Royal Canadian Corps of Signals operates, in addition to stations established for military purposes, 17 permanent stations and 2 summer stations situated along the Mackenzie River and in Yukon on behalf of the Bureau of Northwest Territories and Yukon Affairs, Department of Mines and Resources.

**Department of Public Works.**—Eleven stations are operated to provide emergency communication between the mainland and certain islands, and 9 stations to provide emergency links in existing landline circuits.

**Department of Mines and Resources.**—This Department operates 1 private commercial station at the Dominion Observatory for the transmission of time signals, 2 private commercial and 2 experimental stations in the National Parks of Canada, together with 6 other portable experimental stations.

### Subsection 2.—Provincial Government Radio Stations.

**British Columbia.**—The Department of Lands operates 10 ship stations, 57 private commercial stations, and 1 experimental station in connection with forest fire protection services. Under the Attorney General's Department the provincial police operate 4 ship stations and 25 private commercial stations, and the Game Commission operates 3 ship stations and 1 private commercial station.

**Alberta.**—The Forest Service, of the Department of Lands and Mines, operates 5 private commercial stations in connection with forest fire protection.

**Saskatchewan.**—The Department of Natural Resources operates 22 private commercial stations and 3 experimental stations in connection with forest fire protection services; the Saskatchewan Power Commission operates 2 private commercial stations and 12 commercial receiving stations (in service trucks, etc.) to provide emergency radio communication during power-line failures, etc.

**Manitoba.**—The Department of Mines and Natural Resources operates 2 private commercial stations and 1 aircraft station in connection with survey parties.

**Ontario.**—In northwestern Ontario, the Forestry Service operates 5 public commercial stations furnishing a point-to-point radiotelephone service, 4 public commercial stations furnishing a point-to-point radiotelegraph service, and 12 public commercial stations furnishing a ground-to-plane radiotelephone service to aviation companies operating in that area. In connection with forest fire protection services there are also 28 private commercial stations, 38 experimental stations, and 6 aircraft stations.

### Subsection 3.—Privately Owned Commercial Stations.

From Table 1 it will be noted that there were 10 limited coast stations, 81 public commercial stations, and 489 private commercial stations in operation in the Dominion at Mar. 31, 1939. A public commercial station situated at Drummondville, Que., provides transoceanic radiotelegraph and radiotelephone services to Great Britain and Australia, and a radiotelephone service to Newfoundland. These stations are similar in one respect, in that they are owned and operated by private individuals or companies incorporated under the laws of the Dominion, or of one of the provinces.

The limited coast stations are, as a rule, privately owned and provide a ship-to-shore communication service with ships owned or operated by the licensees only. Two of such stations are, however, owned and operated by the Canadian

Marconi Company, one situated at Louisburg, N.S., providing a long-range radio-telegraph service to ships at sea and the other situated at Drummondville, Que., providing a long-range radiotelephone service to ships at sea. The facilities of these two stations are open to the general public. The services performed by commercial stations, both public and private, are many and varied. Generally speaking, these stations are located in areas not served by telephone, telegraph, or other means of telecommunication. The majority of these stations perform a point-to-point radio-telegraph or radiotelephone service, although an increasing number are being utilized for ground-to-plane communication. These stations provide an invaluable means of contact with mining camps, lumber mills, exploration and survey parties, trading posts, and many points that would otherwise be cut off from the more settled parts of the Dominion.

Private commercial stations may be used only for the handling of messages relative to the private business of the licensee, whereas public commercial stations may be used for the handling of messages for the general public.

### **Section 3.—Program Broadcasting and Regulation under the Canadian Broadcasting Corporation.**

#### **Subsection 1.—Administration of the Canadian Broadcasting Corporation.**

The Canadian Broadcasting Corporation succeeded the Canadian Radio Broadcasting Commission on Nov. 2, 1936. This—the first nationally owned and controlled radio corporation in North America—has done much to further its aim of providing as complete a service as possible to residents of every part of Canada. The Corporation operates under the Canadian Broadcasting Act, 1936, which provides that the Corporation shall consist of a Board of nine Governors chosen to give representation to the principal geographical divisions. In practice, the Board of Governors determines and supervises policy, while actual administration and operations are under the direction of the General Manager.

The administrative organization of the CBC consists of the following divisions: Executive, Secretariat, Finance, Engineering, Program, Press and Information, Commercial, and Station Relations. The by-laws of the Corporation approved by the Governor in Council provide a formula for general administration and reflect the policy of the Board.

As provided for in the Act, the regulation of all Canadian programs is in the hands of the Canadian Broadcasting Corporation. The CBC is empowered to issue regulations of a general character applicable to all broadcasting in Canada, but it does not otherwise interfere with the freedom of choice in programs of privately controlled stations suitable for covering local areas. Coverage of wider regions is dependent almost entirely upon the CBC networks. New regulations, within the scope of the Act, were made necessary by the events of 1939. The CBC uses its powers to control all programs broadcast in Canada, to eliminate abuses, and to maintain a desirable standard and quality in all Canadian programs. The Corporation neither exercises, nor authorizes any private station to exercise, any restrictions on matter broadcast, other than those specifically set out in the printed regulations issued by the Corporation in its capacity as the authority over all broadcasting in Canada.

**Conduct of the CBC During War Time.**—The personnel of the Censorship Board of the Dominion Government in 1939 included a senior officer of the Corporation to look after the interests of radio broadcasting. Immediately after the

outbreak of war, CBC transmitters and the short-wave receiving station were placed under guard by the R.C.M.P. to prevent sabotage.

The aim of the Censorship Co-ordination Committee is to interfere as little as possible with the ordinary avocations of life and the enjoyment of property. All stations are required to supply in advance of broadcast full particulars as to all talks scheduled, including title and nature of the talk and the speaker. Stations are requested to submit their manuscripts in advance and secure permission to broadcast. All foreign language broadcasts are prohibited. All stations are required to submit their news copy to the Censorship Board. Broadcasting from public meetings is prohibited. A progressive retraction of activities of the CBC that are justifiable under normal conditions, but not demonstrably necessary in war time, has been put into effect, and the money thus saved allocated for use in strengthening programs and for necessary reserves.

*Broadcasting of News Since the Outbreak of War.*—The ordinary regulations state that there should be no restriction upon broadcasting of news by any persons, provided that the CBC has the right, if news services are found to be subversive of the interests of Canada in times of stress, to stop them. By previous agreement with the Canadian Press, news bulletins are secured from that organization. Local news is secured under arrangements between each station and its local papers. Broadcast of news from sources other than the above is not permitted during war time without permission in writing from the Corporation. The CBC may use 'actuality' broadcasts or recordings of events in its news bulletins. Should private stations use CP-CBC news broadcasts, they do so on a sustaining and strictly non-sponsored basis.

For a period following the outbreak of war, news bulletins were inserted in programs. After a short time, flashes and special bulletins were curtailed and set news periods substituted. Normal program arrangements were resumed, particular care being taken in choosing commentators.

### Subsection 2.—Operations.

**Broadcasting Facilities.**—The extension of broadcasting facilities embraces two considerations, the first depends on facilities of the CBC, and the second on the reservation that licences for high-power transmitters, on both long- and short-wave bands, are for use by the public service system. Under Sect. 24 of the Act, the CBC is required to review all applications for licences for new stations, as well as applications for increases in power and change in frequency or change in location. It is the policy of the Board to serve community interests by giving every practical encouragement and assistance to local stations.

During 1939 the CBC completed construction of its fourth 50,000-watt transmitter, CBK at Watrous, Sask. The others are: CBL, Toronto; CBF, Montreal; and CBA, Sackville, N.B. With the inauguration of CBK, the power of CBC-owned stations increased to 212,000 watts, or three-quarters of the power of all stations in Canada. At the beginning of 1937 the power of all stations in Canada was 79,000 watts. At the end of 1939 the CBC National Network, including the four 50,000-watt stations, was made up of 10 stations owned or leased by the Corporation, 26 privately owned affiliated stations, and 23 privately owned supplementary stations. In the achievement of this coverage, designed to be as effective to the entire Dominion as possible, the needs of the rural population were considered as well as those of urban areas. Quebec Province is equipped with both French and English outlets.

Private stations, formerly free to arrange commercial hookups, subject to the approval of the Corporation, were brought more closely under control of the CBC during 1939, prior to the advent of war. All commercial hookups are now approved by the Corporation through its Commercial Department, which arranges contracts with each station.

Interference from foreign stations continued to be a serious problem to the CBC, but ratification by Mexico of the agreement reached at the Inter-American Wave-length Conference held at Havana in November, 1937, improved the situation to a considerable extent.

During 1939 the construction of a high-powered short-wave station was again considered, but no action was taken because of the expense involved.

#### 6.—Broadcasting Stations of the CBC National Network, Showing Time Zones, Identification Letters, Locations, and Frequencies, as at Mar. 31, 1940.

NOTE.—Owned or leased stations are marked with a dagger (†) and affiliated stations, on which certain hours are reserved for CBC programs, by an asterisk (\*). For the remaining stations the use of CBC programs is optional.

**Program Service and Development.**—In November, 1936, the CBC served less than 50 p.c. of the population; at the beginning of 1940, service had been extended to 84 p.c.

In a typical month of the past year, 2,000 programs covering 663 hours of broadcasting were produced; this was in addition to the French network programs numbering 890.

Music continues to be the backbone of program work. In serious music the Corporation has continued its policy of assisting existing orchestras and musical organizations in various Canadian centres. The presentation of original Canadian

compositions has been expanded in such programs as that presented by the Vogt Society and a weekly program reviewing the Canadian scene in snapshot form and presenting works of new Canadian composers. The Metropolitan Opera, the NBC Symphony Orchestra, and the New York Philharmonic-Symphony Orchestra were again heard in Canada, over the CBC network.

In the field of drama, 456 plays have been purchased and produced, including the winners of the previous year's play-writing contest. Regional drama production from Vancouver and Winnipeg, as well as from Toronto and Montreal, has steadily improved. A new and interesting development is the local drama workshop, presenting Canadian material and providing junior talent and junior writers with an opportunity of advancing their own technique. Through the activities of the different auditioning boards at key production points, and through the personal contact and observation of the Drama Department the constant presentation and development of new material is facilitated.

Almost 1,000 different speakers have taken part in CBC talks since the inauguration of this type of program. The advent of war brought a large increase in news commentary and specialized background analysis of international affairs. In addition, regular features on science, literature, the arts, health, travel, sports, and adventure are given. More and more attention is being directed to the selection of suitable microphone material and proper studio production.

The latest development is the Features Broadcasts Department. The work of this Department is peculiarly Canadian in character; it creates programs from actuality recordings, special music, and written dialogue to give a sound picture of some particular aspect of the Canadian scene and its relation to the general social pattern of the country. Not only has it been successfully used in the re-telling of the life of the active service forces of Canada, but also in the great contribution to the war effort by Canadians on the home front.

Actuality broadcasts and special events retain a prominent place in national program service. The 'highlighting' of national and international events and the increasing use of the facilities of this Department for servicing other types of programs are notable features. In addition to its regular programs, the CBC broadcasted the visit to Canada of Their Majesties, King George VI and Queen Elizabeth, an unprecedented task, the successful accomplishment of which was commented upon favourably in all parts of the world. A quarterly review of the year's happenings is regularly presented, composed in large part of excerpts from actualities made at the time. Scrapbook programs presented weekly also make extensive use of actuality pictures of the Canadian scene. Experiments with a weekly program from the Canadian troops at Aldershot have now made this into a regular CBC feature. This program is produced and presented by a special CBC program unit with the Canadian forces.

The Farm Broadcast Department acts as a clearing house for information most needed by the farmer from day to day, week to week, and season to season; it is responsible for a daily broadcast each weekday noon-hour throughout the year in the various regions. The response to these broadcasts has been most gratifying, particularly in the Maritimes and in the Prairie Provinces. In the summer of 1940 this regional farm service was extended to British Columbia, thereby completing CBC's national service to farmers across the country.

The year 1939 was marked by the inauguration and gradual development of children's programs. The present pattern provides a weekly story-telling period

for younger children and a children's scrapbook half-hour for older children. The scrapbook is devoted to good music, entertainment, nature lore, specially written dramatized serial stories with a Canadian locale, and actual microphone visits to various Canadian scenes with particular appeal to children.

In the field of school broadcasting, the Corporation co-operates regionally with any province desiring to present and use a clearly formulated program of broadcasts to schools. This co-operation is at present most highly developed with the British Columbia Department of Education.

All religious broadcasts are supervised by the National Religious Advisory Council comprising representatives of the principal religious denominations in Canada. This Council co-operates in arranging two Sunday half-hour network broadcasts and through local councils arranges morning devotional periods each weekday in the various regions.

### Subsection 3.—Finances.

The administration of the finances of the Corporation continues to be conducted conservatively by keeping the cost of operations within the range of current revenues, with a safe margin of revenue to spare. Vigilant control of expenditures is exercised by the Board of Governors in determining the amounts to be available for principal objects, although actual supervision of the details of expenditures is under the direction of the Chief Executives. Fixed assets were increased by \$346,561 during the year ended Mar. 31, 1939, owing mainly to the construction of two large new transmitters, one in the Maritimes and the other in Saskatchewan. The fixed assets of the Corporation as at Mar. 31, 1939, amounted to \$1,452,210, book value, against which a reserve for depreciation has been provided amounting to \$377,211, leaving a net value of \$1,074,999. The Corporation received a loan of \$500,000 from the Dominion Government for construction of capital works. This loan bears interest

at 3½ p.c. and is repayable in annual instalments of \$50,000. The first instalment was paid off in 1939.

Radio receiving set licence fees are collected by the Department of Transport and the money turned over to the CBC in the manner described at p. 722. As supported by the figures of the table on that page, the collection of revenue, by areas, is in approximately the following ratios: Ontario, 40 p.c.; Quebec, 24 p.c.; Prairie Provinces, 19 p.c.; British Columbia, Yukon and N.W.T., 9 p.c.; Maritime Provinces, 8 p.c.

**PART VIII.—THE POST OFFICE.\***

**Historical.**—A brief account of the pre-Confederation development of postal services in Canada is given at pp. 789-790 of the 1934-35 Year Book.

At Confederation the provincial systems were transferred to the Dominion. The Post Office Act of 1867 established a service throughout Canada. The domestic rate on letters was reduced from 5 to 3 cents per half-ounce, and in 1870 the rates to the United States and the United Kingdom were reduced from 10 to 6 cents and from 12½ to 6 cents, respectively, per half-ounce. In 1875 a convention between Canada and the United States reduced postal rates between the countries to the domestic level. In 1878, on the admission of Canada to the Postal Union, letter postage to the countries of the Postal Union was reduced to 5 cents per half-ounce.

\* Revised by H. Beaulieu, Director, Administrative Services, Post Office Department.

After a conference in 1897 Imperial penny postage (2 cents per half-ounce) was established on Dec. 25, 1898, while the domestic rate was reduced from 3 to 2 cents per ounce. These rates were maintained until 1915, when, with the rising costs of the war period, rates were increased. Penny postage again became effective for Canada, to the United States, Newfoundland, and other countries of North America on July 1, 1926, and to the United Kingdom and all other places within the British Empire on Dec. 25, 1928, with later extensions to France and South America. On July 1, 1931, a special revenue tax came into effect on letters addressed to places in Canada, throughout the Empire, to France, to Spain, and to North and South America generally, making the rate in these cases 3 cents for the first ounce and 2 cents for each additional ounce.

The Post Office Department is administered by the Postmaster General. Besides the several administrative branches at Ottawa, the Dominion is divided into 15 districts, each in charge of a District Director or Superintendent of Postal Service. The Canadian system embraces a territory more extensive than that served by any other system, excepting those of United States and Russia, and the relatively small population compared with the great distance to be covered makes inevitable a particularly difficult and relatively expensive service.

**Rural Mail Delivery.**—A system of rural mail delivery was inaugurated in Canada on Oct. 10, 1908, limited at that time to existing stage routes. The service was greatly extended by new regulations that took effect on Apr. 1, 1912. The result has been an increase in the number of rural routes from approximately 900 in 1912 to 4,775 in 1939, having 270,000 mail boxes as against approximately 25,000 in 1912.

**Mail Transportation.**—The conveyance of mail by land, water, and air entailed a total expenditure of \$14,782,705 during the fiscal year ended 1939. Railway carriage cost \$6,944,209, land transportation \$6,244,054, conveyance by steamship \$281,152, and conveyance by air \$1,313,290. These amounts were paid solely for services rendered as carriers. For details regarding air-mail services, see p. 738. Special subsidies are granted to assure the maintenance of certain steamship services. Since these subsidized services provide transportation for passengers and freight as well as mail, the subsidies are included with other expenditures on water transportation at pp. 690-691.

<sup>1</sup> Exclusive of commissions and allowances to postmasters and some other smaller items. The gross revenue in the fiscal year 1937 was \$41,181,566, in 1938, \$42,998,349, and in 1939, \$42,896,178.

**Postage.**—The net revenue receipts shown in Table 3 are received mainly in the form of postage as is indicated by the following gross figures.

The gross value of the postage stamps, post cards, etc., sold during each of the latest eight fiscal years, was: \$27,242,715 in 1932, \$25,999,159 in 1933, \$25,541,129 in 1934, \$26,303,451 in 1935, \$27,341,608 in 1936, \$28,179,323 in 1937, \$28,808,513 in 1938, and \$28,836,457 in 1939. Receipts from postage paid in cash were as follows: \$9,078,136 in 1932, \$8,173,950 in 1933, \$8,129,387 in 1934, \$8,619,712 in 1935, \$9,277,072 in 1936, \$10,203,389 in 1937, \$10,865,895 in 1938, and \$11,065,527 in 1939.

**Auxiliary Services.**—The auxiliary postal services—the issuing of money orders (including postal notes) and the facilities offered by the Post Office Savings Bank—have expanded enormously since Confederation. In 1868, there were 515

money-order offices in operation, issuing orders to an amount of \$3,342,574: the following tables show the magnitude of operations in recent years. Statistical tables showing deposits with the Government savings banks since Confederation and the business of the Post Office Savings Bank, 1934-39, are included in the chapter on Currency and Banking (Chapter XXII).

#### 4.—Operations of the Money-Order System in Canada, Fiscal Years 1921-39.

NOTE.—For 1868 to 1900, see Canada Year Book, 1911, p. 289; for 1901-20, see 1932 Year Book, p. 622.

**Air-Mail Services.**—The total weight of mail carried by air throughout Canada during the year ended Mar. 31, 1939, was 1,822,399 lb., while the mileage flown was 3,711,987.

A noteworthy achievement was the inauguration of a through air-mail service via Trans-Canada Air Lines from Montreal to Vancouver on Dec. 1, 1938, with stops at Ottawa, Toronto, North Bay, Winnipeg, Regina, and Lethbridge. Connections to and from Calgary, Edmonton, and northern Saskatchewan cities are provided by feeder lines.

## PART IX.—THE PRESS.

An article on the development of the press in Canada appears at pp. 737-758 of the 1939 Year Book.

## Section 1.—Statistics of the Press.

The Dominion Bureau of Statistics does not collect statistics regarding the circulation of newspapers and periodicals in Canada and the following tables have been compiled from data taken from *McKim's Directory of Canadian Publications*.

The publications enumerated in Table 1 include a number for which no estimate of circulation is given. Such publications are therefore omitted from the compilation of circulations in Tables 2 and 3. This accounts for the difference in the number of daily, semi-weekly, and weekly publications shown in Tables 1 and 2. Comparison of the figures of Table 3 showing publications in cities of 20,000 population or over, with those for the same year of Table 2, showing publications for the whole of Canada, indicates that the daily newspapers are confined almost entirely to these larger urban communities, but that, in the field of weekly publications, while the greater part of the circulation is accounted for by the publications of these cities, by far the greatest number of weeklies are issued in smaller communities. The weekly seems to be the standard medium for local news in small towns and villages.

The French weekly press in particular is of course a strong influence in Quebec. The urban section is centered in Montreal. The rural weekly press in this Province stands close comparison with that of the rest of the country; its evolution has been parallel to that of the English rural press, with the difference that its field has been more limited. Most of the French rural weeklies, if small as measured by circulation, are old institutions, many of them having passed the half-century mark. As in the case of the English weekly press, the development of local job printing, especially commercial advertising, has been a strong influence in the survival of many of the smaller rural weeklies.

### 1.—Publications in Canada, by Frequency of Issue, 1921-39.

NOTE.—Compiled from *McKim's Directory of Canadian Publications*. Figures do not include Newfoundland.

<sup>5</sup> Commenced operations in 1938

and, therefore, no circulation figure is given.

**Publications in the French Language.**—Such publications include a comparatively large proportion of periodicals dealing with literature, music, religion, and similar cultural subjects, and the circulations of many of these periodicals are not reported in *McKim's Directory of Canadian Publications*. Publications for which the circulations are not reported are not included in either the number or circulations given in Table 4. Since the majority of such unreported publications are likely to have fairly small circulations, the figures of the table represent a larger proportion of total circulation than of the total number of publications. Among daily newspapers, there is only one small publication unreported in each year.

### 4.—Circulations of French Language Publications in Canada, by Provinces, 1937 and 1938.

NOTE.—Figures of circulation are given to the nearest thousand as some publications are not exactly reported. Compiled from *McKim's Directory of Canadian Publications*.

## Section 1.—The Government in Relation to Labour.

### Subsection 1.—The Dominion Department of Labour.

The Department of Labour of the Dominion Government was established in 1900 under the authority of the Conciliation Act. At the outset its chief duties comprised the administration of certain provisions of this statute that were designed to aid in the prevention and settlement of labour disputes, the administration of the Government's fair wages policy for the protection of workmen employed on Dominion Government contracts and on works aided by grants of public funds, the collection and classification of statistical and other information relative to conditions of labour, and the publication of a monthly periodical known as the *Labour Gazette*. From 1900 to 1909 the Department was administered by the Postmaster General, who was also Minister of Labour. It was constituted a separate Department under the Labour Department Act, 1909.

The work of the Department was greatly increased in 1907 by the passing of the Industrial Disputes Investigation Act. At present the Department is also charged with the administration of the Government Annuities Act of 1908, the White Phosphorous Matches Act of 1914, the Employment Offices Co-ordination Act of 1918, the Technical Education Act of 1919, the Combines Investigation Act of 1923 as amended in 1935 and 1937, the Fair Wages and Hours of Labour Act of 1935, the Dominion relief legislation and the Youth Training Act, 1939, and with the work arising out of Canada's relations with the International Labour Organization. In addition, there has been a considerable extension of departmental activity in the collection and publication of information concerning labour organizations, wages and hours of labour, prices and the cost of living, strikes and lockouts, industrial

\* Except as otherwise indicated, the material in this chapter has been prepared or revised under the direction of W. M. Dickson, Deputy Minister, Department of Labour, Ottawa.

agreements, industrial accidents, labour legislation, and related subjects. For information regarding government annuities and technical education, see the chapters on Insurance and Education, respectively.

**Industrial Disputes Investigation Act.**—The Industrial Disputes Investigation Act (R.S.C., 1927, c. 112) has attracted considerable favourable attention from legislators and publicists throughout the world. As enacted in 1907, it forbids strikes and lockouts in mines and certain public utility industries until the matters in dispute have been dealt with by a board of conciliation and investigation consisting of three members, two appointed by the Minister of Labour on the recommendation of the respective parties to the dispute, the third on the recommendation of the first two, or, if they fail to agree, by the Minister himself. Should either of the parties fail to nominate a board member, the Minister may appoint a fit person on its behalf. After such a board has made its report, either of the parties to the dispute may reject its findings and declare a strike or a lockout, a course that has been adopted, however, only in a small percentage of cases. With the consent of the parties concerned, the machinery of the Act may be utilized in connection with disputes in other industries.

In January, 1925, a judgment was rendered by the Judicial Committee of the Privy Council declaring that the Act as it stood was not within the competence of the Dominion Parliament.\* At the ensuing session of Parliament amendments were made to the statute with the object of limiting its operation to matters not within exclusive provincial jurisdiction except when a province has passed legislation permitting the Dominion legislation to apply. The legislatures of all provinces except Prince Edward Island have taken advantage of this provision and enacted such enabling legislation. In December, 1937, however, a statute entitled the Industrial Conciliation and Arbitration Act was passed by the British Columbia Legislature providing provincial machinery for dealing with industrial disputes within the legislative jurisdiction of the Province and repealing the Industrial Disputes Investigation (British Columbia) Act.

Under the provisions of the War Measures Act, an Order in Council was passed on Nov. 7, 1939, extending the scope of the Industrial Disputes Investigation Act to cover disputes between employers and employees engaged in war work. This work is defined as including the construction, execution, production, repair, manufacture, transportation, storage, or delivery of munitions of war or supplies, and also the construction, remodelling, repair, or demolition of defence projects.

A review of the proceedings under the Industrial Disputes Investigation Act from its enactment in March, 1907, to Mar. 31, 1940, shows that, during the 33 years, 978 applications were received for the establishment of boards of conciliation and investigation, as a result of which 594 boards were established. In all but 41 cases, strikes or lockouts were averted or ended.

**Fair Wages Policy.**—The Fair Wages Branch of the Department of Labour is charged with the preparation and enforcement of the labour conditions and schedules of minimum wage rates that are inserted in Dominion Government contracts for works of construction, remodelling, repair, or demolition. The number of fair wages schedules prepared, from the time the Fair Wages Policy was adopted by the Dominion Government in 1900 up to the end of the fiscal year 1938-39, was 8,895. The number of fair wages schedules furnished during the fiscal year 1938-39 was 675.

\* See p. 241 of the *Labour Gazette* for February, 1925, for text of judgment of the Judicial Committee of the Privy Council in regard to the validity of this statute.

The Department of Labour also co-operates closely with other departments of the Government in ensuring the observance of the fair wages conditions inserted in contracts for the manufacture of various classes of equipment and supplies for Government use, and is frequently consulted by other departments regarding the prevailing rates of wages to be observed on works carried out by day labour.

The Fair Wages Policy of the Government of Canada was originally based on a resolution adopted by the House of Commons in 1900. The policy was later expressed and developed in various Orders in Council, in the Fair Wages and Eight Hour Day Act, 1930, and in the Fair Wages and Hours of Labour Act, 1935. The provisions of these are set out in some detail at pp. 780 and 781 of the 1939 edition of the Canada Year Book.

Owing to the large and increasing number of defence contracts that are being placed by the Dominion Government for the manufacture and overhaul of aircraft, for the manufacture of ordnance, and for the construction and repair of boats of various types, it is now the policy of the Government to insert in such contracts schedules that have been drawn up in consultation between the Department of Labour and the other Government departments concerned, setting forth the minimum rates of wages and the maximum hours to be observed in the execution of the respective undertakings throughout the country. The Department of Labour co-operates closely with the Government departments concerned in ensuring that the contract conditions are strictly enforced.

**Labour Gazette.\***—Since the establishment of the Department of Labour in 1900, a monthly publication known as the *Labour Gazette* has been issued. From its inception the *Labour Gazette* has maintained a continuous record of industrial, social, and economic conditions in Canada, as reflected in legislation, employment and unemployment, price trends, labour disputes, conventions and recommendations of labour organizations, and industrial relations programs. One of the particular functions of the Department is the promotion of industrial harmony, and prominence is therefore given in the *Labour Gazette* to proceedings under the Industrial Disputes Investigation Act and the Conciliation and Labour Act. Complete information is also given with respect to proceedings under other measures administered by the Department, including the Employment Offices Co-ordination Act, the Combines Investigation Act, the Technical Education Act, the Government Annuities Act, the unemployment relief legislation, the Fair Wages and Hours of Labour Act, and the Youth Training Act.

Since the outbreak of war in September, 1939, a monthly record has been maintained in the *Labour Gazette* of the activities of the War-Time Prices and Trade Board, and also of the effect of the War on labour standards and social legislation in the various belligerent countries.

In particular the September, 1939, issue contains a chronological record of Canada's entry into the War, including: a review of preliminary war measures in Canada; a reference to the emergency parliamentary session convened on Sept. 7, and the war measures adopted; and the establishment of the War-Time Prices and Trade Board, together with a detailed account of the action taken to check any undue increase in prices and to prevent hoarding.

Included in the statistical information published in the *Labour Gazette* is a monthly analysis of prices (wholesale and retail) in Canada, indicating trends in the

\* A charge of 20 cents per annum is made for this publication to subscribers in Canada, the United States of America, and Mexico, and of \$1 per annum to subscribers in all other countries.

cost of living and showing the prices of staple articles, together with index numbers of price movements over a series of years. Financial and statistical summaries of pensions for the aged and the blind in Canada are also published at regular intervals. A special section records the work of the International Labour Organization (League of Nations), the draft conventions and recommendations adopted by that body being published in full.

The *Labour Gazette* is widely distributed throughout Canada, and the statistical and other information contained therein is constantly used in connection with the discussion of wages and other issues between employers and workers.

**Labour Legislation.**—Considerable attention is given by the Department to labour legislation both in Canada and in other countries. At the close of the sessions of the Dominion Parliament and the legislatures of the several provinces, the labour laws enacted are summarized in the *Labour Gazette*. Statutory regulations are also noted in the *Labour Gazette* and a résumé of the more important judgments involving labour questions is published.

Beginning with 1915 the Department has published a series of annual reports on "Labour Legislation in Canada".\* The first report was a consolidation of all labour legislation on the statute books of the Dominion and the provinces at the end of 1915, and similar consolidations were issued for 1920, 1928, and 1937. Reports for the intervening years set out the text or a summary of the laws passed in those respective years and each contains an introduction giving a summary of the principal measures.

In addition, special branches of labour legislation in Canada or abroad are dealt with from time to time in articles in the *Labour Gazette* or in printed or mimeographed bulletins. Information concerning legislation providing for minimum wages and the regulation of hours of labour in Canada is given in a report entitled "Wages and Hours of Labour in Canada", issued as a supplement to the *Labour Gazette*. Each year, in July, a mimeographed memorandum is issued on workmen's compensation laws in Canada. A summary of Dominion legislation affecting labour, passed during 1939, will be found in Chapter XXX of this volume.

### **Subsection 2.—Provincial Labour Departments and Bureaus.**

Labour legislation in Canada is, for the most part, a matter for the provincial legislatures. In all the provinces but Alberta and Prince Edward Island, there is a special department or bureau charged with the administration of labour laws. In Prince Edward Island there is little labour legislation and in Alberta the Department of Trade and Industry administers most labour legislation, the Board of Industrial Relations having charge of statutes regulating wages and hours. Legislation for the protection of miners is administered in all provinces by the department dealing with mines. Factory legislation in eight provinces and shops legislation in several provinces prohibit child labour, regulate the hours of women and young persons, and provide for safety and health. Minimum wage legislation for both male

\* Obtainable from the King's Printer, Ottawa, price 25 cents per copy.

and female workers in all the provinces except Nova Scotia and Prince Edward Island is administered by special boards which, in most cases, form part of the labour department. Other legislation administered by the provincial departments include the laws in all provinces providing for public employment offices and for the licensing of certain classes of workmen, the Industrial Standards Acts in Alberta, Saskatchewan, Ontario, and Nova Scotia enabling the wages and hours of work agreed upon by representatives of employers and employees to be made legal throughout the industry concerned and the Collective Labour Agreements Act in Quebec permitting collective agreements between employers and trade unions to be made binding on all in the industry. Workmen's compensation laws in all the provinces except Prince Edward Island are administered by independent boards.

For up-to-date information regarding individual provincial Departments of Labour reference should be made to the annual reports of the Departments concerned, or to the Deputy Ministers of the Provincial Governments.

### Subsection 3.—Provincial Labour Legislation, 1939.

The *Labour Gazette* summarizes the 1939 program of provincial legislation affecting labour. "Labour Legislation in Canada, 1939",\* published by the Dominion Department of Labour, summarizes both Dominion and Provincial legislation by subjects, and gives the text of the new Acts and of the amendments to existing legislation.

**Prince Edward Island.**—Amendments were made to the Interpretation Act (Labour Day was added to the list of public holidays), and to the Forest Fire Act. The Judgment and Execution Act consolidates previous legislation on this subject.

**Nova Scotia.**—Amendments were made to the Apprenticeship Act, the Industrial Standards Act, the Motor Carrier Act, the Nova Scotia Housing Commission Act, the Credit Union Societies Act, and the Sydney Charter (imposing a tax upon non-residents commencing employment in the City). The Nova Scotia Labour Act was continued in force until May 1, 1940, and the Agriculture and Marketing Act consolidates and repeals a number of statutes. New legislation includes the Trade Schools Regulations Act and the Municipal Loan Guarantee Act. The former Act is generally similar to statutes enacted in Ontario and the western provinces and provides for the registration of trade schools and the filing of contracts, etc., with the Director of Technical Education, who may also require copies of text-books and home-study courses and other particulars relating to the staff and equipment of the school. No person under 16 may be admitted to a trade school. The Act does not apply to universities or schools chartered by the Legislature. The Municipal Loan Guarantee Act enables municipalities to take advantage of the Dominion Municipal Improvements Assistance Act.

\* Obtainable from the King's Printer, Ottawa, price 25 cents per copy.  
89187—48}

**New Brunswick.**—Amendments were made to the Labour and Industrial Relations Act, the Mining Act, the Factories Act, the Health Act, and the New Brunswick Co-operative Associations Act. The Industrial Standards Act is generally similar to like Acts of other provinces, but applies only to the construction industry. The Early Closing Act repeals a similar Act of 1917 and contains a number of new provisions. The Municipal Improvements Assistance Enabling Act empowers municipalities to take advantage of the Dominion Act of the same title.

**Quebec.**—Amendments were made to the Collective Labour Agreements Act, the Fair Wage Act, the Workmen's Compensation Act, the Quebec Mining Act, the Electricians' and Electrical Installation Act, the Youth Aid Act, the Needy Mothers' Assistance Act, the Blind Persons Aid Act, and to those sections of the Code of Civil Procedure relating to exemption from seizure of certain salaries and wages. New legislation includes an Act respecting the Arbitrating of Disputes Between Certain Charitable Institutions and their Employees, an Act to Promote Unemployment Insurance, an Act to Establish a Board of Economic Reconstruction, an Act to Increase the Powers of Municipal Corporations with Respect to the Building of Sanitary Houses, an Act to aid Co-operative Agricultural Associations, and an Act to Promote the Organizing of Fish Co-operative Federations. Another statute provides that expenditure for works to relieve unemployment is to constitute capital expenditure.

The Act to Promote Unemployment Insurance is contingent upon the establishment of such a system by the Dominion and Provincial Governments and authorizes the Lieutenant-Governor in Council to enter into an agreement with the Dominion, in conformity with the constitutional rights of the Province.

The Act respecting labour disputes in charitable institutions is designed to prevent the interruption of service in institutions providing medical or other treatment for the indigent and makes it illegal for the staff or employees of any such institution to strike and provides for the establishment of an arbitration council to adjust any disputes respecting emoluments, salaries or wages, or hours of work.

The Act respecting the Board of Economic Reconstruction names the Provincial Treasurer and the Ministers of Roads, Public Works, and Labour as a Board to administer unemployment relief and funds for relief works. The objects of the remaining Acts are fairly well described by their titles.

**Ontario.**—Amendments were made to the Factory, Shop, and Office Building Act, the Mines Act, the Workmen's Compensation Act, the Industrial Standards Act, the Apprenticeship Act, the Unemployment Relief Act, the Mechanics' Lien Act, the Municipal Act, (respecting the licensing of electrical workers and the establishment of pension funds for civic employees), the Old Age Pension Act, the Companies Act (with respect to employees' pension schemes and empowering insurance companies to make loans under the National Housing Act). The Co-operative Credit Societies Act was amended to change its title to Credit Unions Act and to bring its provisions into accord with present practice. A new Act, the Unemployment Insurance Act, enables the Lieutenant-Governor in Council to enter into arrangements with the Governor General in Council to carry out, within Ontario, the provisions of any Dominion Act providing for a general scheme of unemployment insurance.

**Manitoba.**—Amendments were made to the Strikes and Lockouts Prevention Act, the Minimum Wage Act, the Shops Regulation Act, Government

Liquor Control Act (respecting the hours of sale), the Fair Wage Act, the Mines Act, the Factories Act, the Old Age and Blind Persons Act, and the Employment Bureau Act. The Unemployment Relief Loan Act was extended for another year; new legislation included the institution of a pension scheme for Provincial Government employees, and Acts to implement the Municipal Improvements Assistance Act and the National Housing Act of the Dominion Parliament.

**Saskatchewan.**—Amendments were made to the Industrial Standards Act, the Attachment of Debts Act, the Mechanics' Lien Act, the Fire Departments Two-Platoon Act, the Town Act and the Village Act (respecting early closing), the Direct Relief Act, the Municipalities Relief and Agricultural Aid Act, 1937, the Local Improvement Districts Relief Act, 1936, the Child Welfare Act (relating to mothers' allowances), the Old Age Pension Act, the City Act and the Town Act (with respect to the establishment of superannuation or benefit funds), the Co-operative Associations Act, the Co-operative Marketing Associations Act, 1938, and the Credit Union Act. The Vehicles Act, 1939, is a consolidation of the Vehicles Act and the Public Service Vehicles Act. New legislation covered the regulation of trade schools, the provision of municipal medical and hospital services, the establishment of an Industrial Development Board, and Acts implementing the Municipal Improvements Assistance Act and the National Housing Act of the Dominion Parliament. The Trade Schools Regulation Act is similar in scope to the Nova Scotia Act described above, and the Municipal Medical and Hospital Services Act authorizes the municipalities to submit by-laws to the voters regarding provision of such services. Municipalities may combine for the provision of medical services and the total tax per family may not exceed \$50 per annum. The Industrial Development Board Act provides for the appointment of a Board to encourage industrial development by assisting the establishment of new industries and the development of those already established, especially those based on the natural resources of the Province. Aid to employment by the encouragement of industrial art schools, afforestation, and mineral prospecting are also named as objects of the Board, and it is to co-operate with manufacturers in vocational training.

**Alberta.**—Amendments were made to the Male Minimum Wage Act, 1936, the Hours of Work Act, 1936, the Fire Departments Two-Platoon Act, the Early Closing Act, the Industrial Standards Act, and the Credit Union Act. The Mines Act repeals the Coal Mines Regulation Act, 1930, and brings all mines within its purview. The Act contains a number of new safety provisions. The Bureau of Public Welfare Act is a revision of the Bureau of Relief and Public Welfare Act, 1936. New Acts include one to implement the Municipal Improvement Assistance Act of the Dominion Parliament and the Maternal Welfare Act, which provides for a grant of \$15 to any needy expectant mother and also empowers the Minister of Health to appoint district nurses in areas where the existing nursing facilities are inadequate.

**British Columbia.**—Amendments were made to the Workmen's Compensation Act, the Weekly Half-Holiday Act, the Fire Marshal Act (relating to the employment of projectionists in motion picture theatres), the Motor Vehicle Act, and the Credit Unions Act. The Semi-Monthly Payment of Wages Act was revised and its scope extended; a new Act, the Motor Carrier Act, was passed which requires operators of motor vehicles for the transportation of passengers or freight to be licensed by the Public Utilities Commission. School buses and urban-taxicabs are exempted.

**Yukon.**—Amendments were made to the Workmen's Compensation Ordinance of 1937 and the Miners' Protection Ordinance.

**Northwest Territories.**—The Local Administrative District Ordinance provides for the establishment of such districts and stipulates that the Local Trustee Boards may pass by-laws for the enforcement of closing hours in trading establishments. Similar provision was made in an Ordinance of 1894 which is revised by the present Ordinance.

## Section 2.—Occupations of the Wage-Earning Population.

The total population in gainful occupations is recorded at the census. In Section 15 of Chapter IV, pp. 128-146 of the 1937 Year Book, the gainfully occupied in 1931 are dealt with rather extensively under the heading "Occupations of the Canadian People". Statistics of the numerical and percentage distribution of the wage-earning section of the gainfully occupied, by industrial and occupational groups, are given at pp. 741-742 of the 1938 edition of the Year Book, and a table at p. 732 of the 1937 edition shows the numerical and percentage distribution of wage-earners, by age groups, as at the Census of 1931.

## Section 3.—Employment and Unemployment.

### Subsection 1.—Employment and Unemployment Statistics of the Census.

In the 1933 edition of the Year Book, pp. 775-780 are devoted to an examination of the preliminary figures of unemployment as reported at June 1, 1931, for that date and for the preceding twelve months. The final results of this inquiry are available in Vol. VI of the Census Publications, which may be obtained from the King's Printer, Ottawa, at a price of 75 cents for the paper-bound volume.

Tables 24 and 25, at p. 836 of the 1934-35 Year Book, summarize, by industries, the statistics of those actually unemployed at the date of the Census, and of time lost during the twelve months preceding that date.

**Estimates of Employment of the Wage-Earning Population.\***—The term 'unemployment' is, unfortunately, variously interpreted but it is of the utmost importance that it should be strictly defined; an explanation of the sense in which it is used in the censuses of Canada and in estimates of employment and unemployment made by the Bureau of Statistics is given at pp. 809-812 of the 1939 Year Book.†

Briefly, a percentage employed from month to month is calculated on: (1) the Department of Labour's figures of unions, corrected for sample qualities; (2) employment figures, collected by the Bureau of Statistics, in relation to the total population normally gainfully occupied, this latter making allowance for the changing population content. The percentage is then applied to the census number employed to calculate the number of wage-earners in any month. The difference between the wage-earners and the number employed is obviously the unemployed.‡ Another condition is exacted, viz., the maintenance of a high correlation between factors (1) and (2) and, in order to ensure this, checking at frequent intervals is resorted to to guard against any new element entering undetected into the equation used.

\* Prepared by M. C. MacLean, M.A., F.S.S., Chief of Social Analysis, Dominion Bureau of Statistics.

† See also subsections 2 and 4 pp. 751 and 759 for other estimates.

‡ The chart on p. 759, plotted from the data of Table 1, illustrates this relationship.

**1.—Estimated Wage-Earners and Numbers and Proportions Actually Employed, 1921-39, and by Months 1938, 1939, and to March, 1940.**

**Subsection 2.—Employment as Reported by Employers.\***

The Dominion Bureau of Statistics has for many years tabulated monthly reports of the numbers employed by firms having 15 or more persons on their staffs in the following main industrial groups: manufacturing, logging, mining, transportation, communications, construction and maintenance, services (i.e., hotels and restaurants and laundering and dry-cleaning), and trade; information has also been received from financial institutions since 1938, but, for the present, their returns are not included in the general index, for which the record extends from 1920. Monthly statistics are not collected from the agricultural industry, domestic and personal services, governmental, educational, and other professional services.

During 1939, about 11,650 employers, in the eight industries first-named, reported an average staff of 1,105,700 persons, varying from 1,015,600 at April 1, to 1,206,200 at the beginning of November. At the latter date, the reporting establishments employed 1,066 men and women in each 10,000 of the total population, while the 1939 average represented 980 per 10,000. This coverage of industrial workers may be compared with the data obtained from the latest Decennial Census, which showed that, at June 1, 1931, 1,320 per 10,000 of the total population were at work in the industries represented in the general index of employment. The current surveys of employment, therefore, represent conditions among a very large proportion of the total industrial population.

\* Revised by Miss M. E. K. Roughsedge, Official in charge of Employment Statistics, Dominion Bureau of Statistics.

These employment statistics have been shown in a special study,\* which correlates the distribution of workers covered in 1931 with the distribution of workers enumerated at the 1931 Census, to be representative, so far as several major industrial groupings are concerned, of the census classification.

The census of occupations showed 2,570,097 wage-earners in the Dominion, of whom 2,100,139 or 81.7 p.c. were at work on the census date (June 1, 1931). Obviously it is with those at work that the monthly employment figures for the same date must be compared. The 7,865 firms making returns for June 1, 1931, reported 940,875 employees, being 36.6 p.c. of the total number of persons reporting themselves as actual or potential wage-earners, and 44.8 p.c. of those at work in all industries at the census date. When the classes of workers not covered in the employment surveys are deducted from the census figures, there remains a total of 1,318,954 persons at work at the census date in the industries sampled in the monthly record, or a total of 1,369,351 if a due proportion of the unspecified workers is included. The employment survey for June 1, 1931, constituted 71.3 p.c. of this adjusted figure, i.e., of the census total for the comparable industries without the unspecified workers, and 68.7 p.c. if a proportion of the unspecified workers is regarded as belonging in the census statistics adjusted industrially for this comparison. This sample may be considered quite adequate, but it would be rather larger if comparison could be made with a similar census taken at the present time, since the number of co-operating firms is constantly growing, having risen from 7,965 at June 1, 1931, to 11,718 at June 1, 1939; the June 1 comparison is used so that the seasonal factor may not enter into the case. The increase in the co-operating employers is accompanied by a growth in the ratio of wage-earners sampled, though the latter increase is not in proportion to the gain in the number of reports tabulated, owing to the fact that the firms now being added to the mailing list tend to employ staffs below the average in number.

Representation in "Manufacturing" when correlated, is shown to have been 82.8 p.c. of the workers enumerated at the Census in the same industrial group; in mining it was 96.9 p.c.; in communications 80.4 p.c.; and in transportation 64.2 p.c. It follows that the figures of employment collected monthly may be used as a good index of the movement of the wage-earning population in intercensal years. (See also pp. 750-751).

Employment in 1939 was influenced by a number of factors that, differing in origin and effect, combined to produce fluctuations frequently at variance with those indicated as normal in the 19 years of the employment record. Among the adverse factors may be mentioned a generally late spring and the widespread uncertainty in business as a result of the political situation in Europe. The impetus to business provided by the Royal Visit and the harvesting of the largest wheat crop in eleven years were among the beneficial influences, while the revival of industrial activity in the United States also had a favourable reaction in the Dominion. The outbreak of hostilities in September had an immediate effect on Canadian business. Responding to these various factors at different times of the year, employment in the first months of 1939 declined to a level lower than at the same date in either 1937 or 1938, but from May 1 rose uninterruptedly until Nov. 1. There was an unusually

\* See the report "Comparison of the Geographical and the Industrial Distribution of the Workers Included in the Monthly Employment Surveys, with the Geographical and Industrial Distribution of the Workers Enumerated at the Census of 1931", by Miss M. E. K. Roughsedge, obtainable from the Dominion Statistician, Ottawa.

small seasonal loss shown at Dec. 1, but the index was then higher than at the same date in any other year of the record. The 1939 index averaged 113.9; it was slightly higher than the 1938 mean of 111.8, but was fractionally lower than that of 114.1 in 1937. With the exceptions of 1937 and 1929, however, the 1939 figure was higher than in any other year of the record.

**Employment by Economic Areas.**—Employment in all provinces except New Brunswick was generally brisker in 1939 than in 1938, although in the first few months comparison with the same period in 1938 was unfavourable; also in most of the provinces the rate of expansion was accelerated towards the close of the year. Manufacturing in each of the economic areas, on the whole, afforded more employment than in 1938; trade also showed improvement in all parts of the Dominion. In the other industries there was less uniformity in the trends, but mining, transportation, and services generally reported greater activity than in the preceding year. Construction in Quebec and the Prairie Provinces, and logging in British Columbia showed increases over 1938, but elsewhere the comparisons for these industries were unfavourable.

**2.—Index Numbers of Employment as Reported by Employers in Economic Areas, as at the First of Each Month, January, 1933, to December, 1939, with Yearly Averages Since 1928.**

**NOTE.**—These indexes are calculated upon the average for the calendar year 1926 as 100. The relative weight shows the proportion of employees reported in the indicated economic area to the total reported by all employers making returns in Canada at Dec. 1, 1939. Averages for 1921-27, inclusive, are given at p. 770 of the 1938 Year Book.

Year.	Maritime Provinces.	Quebec.	Ontario.	Prairie Provinces.	British Columbia.	Canada.
Averages, 1928.....	106.6	108.3	113.8	117.9	106.4	111.6

Relative weights of employment in economic areas, as at Dec. 1, 1939.....	7.6	31.1	41.3	11.9	8.1	100.0

**Employment by Cities.**—Employment in Montreal, Quebec City, Toronto, Ottawa, Winnipeg, and Vancouver was generally better in 1939 than in the preceding year. These centres showed gains ranging from just under 1 p.c. in Winnipeg to 11.3 p.c. in Quebec City; in all but Winnipeg, the increases slightly exceeded the percentage advance in the Dominion as a whole. In Hamilton and Windsor, on the other hand, activity was generally rather lower than in 1938; but the index calculated for the eight cities as a whole showed a 2 p.c. increase, compared with an increase of 1.9 p.c. in the general index for Canada.

Employment in manufacturing, communications, trade, services, and construction in the larger cities in 1939, as in immediately preceding years, did not reach a level equal to that in other parts of Canada. The most outstanding difference in this comparison was again in construction, in which the index for the cities averaged 82.7 during 1939, compared with the Canada figure of 113.0; in the building division, the indexes were 51.7 and 62.1, respectively. On the other hand, the cities employment index for transportation in recent years has been above the Canada figure, standing in 1939 at 91.1, compared with 85.6 throughout the Dominion.

### 3.—Index Numbers of Employment as Reported by Employers in Leading Cities, as at the First of Each Month, January, 1938, to December, 1939, with Yearly Averages Since 1928.

NOTE.—These indexes are calculated upon the average for the calendar year 1926 as 100. The relative weight shows the proportion of employees reported in the indicated city to the total reported by all employers making returns in Canada at Dec. 1, 1939. Averages for 1922-27, inclusive, are given at p. 772 of the 1938 Year Book.

**Employment by Industries.**—Manufacturing as a whole afforded rather more employment during the year; the curve rose from a level several points below that of 1938 in the first months of 1939, to an all-time high at Nov. 1 and Dec. 1, but the average index was only slightly higher than in 1938, and was two points lower than in 1937. The moderate improvement in 1939 over 1938 took place in the group of non-durable manufactured products, while the durable goods division showed, on the average, a falling-off despite the activity prevailing in the heavy industries towards the close of 1939.

Among the non-manufacturing divisions, logging reported reduced employment, owing to the widespread slackness in bush-work in the winter of 1938-39; in the

second half of the year under review, however, the situation was generally better than in the same months of 1938. There was a fractional decline in the average index for communications, while mining, transportation, construction and maintenance, services, and trade afforded more employment, on the average.

**4.—Index Numbers of Employment as Reported by Employers, by Industrial Groups, as at the First of Each Month, January, 1938, to December, 1939, with Yearly Averages Since 1928.**

NOTE.—These indexes are calculated upon the average for the calendar year 1926 as 100. The relative weight shows the proportion of the employees reported in the indicated industry to the total reported by all employers making returns in Canada at Dec. 1, 1939. Averages for 1921-27, inclusive, are given at p. 773 of the 1938 Year Book.

### Subsection 3.—Operations of the Employment Service of Canada.

**Employment Service of Canada.**—Under Sect. 3 of the Employment Offices Co-ordination Act (c. 57, R.S.C., 1927), an Act passed by the Dominion Parliament in May, 1918, the Minister of Labour is empowered:—

- (1) to aid and encourage the organization and co-ordination of employment offices and to promote uniformity of methods among them;
- (2) to establish one or more clearing houses for the interchange of information between employment offices concerning the transfer of labour and other matters;
- (3) to compile and distribute information received from employment offices and from other sources regarding prevailing conditions of employment.

The Act further provides that certain sums of money are to be appropriated annually and paid to the provinces on a basis proportionate to the amount that each expends on the maintenance of employment offices.

The desired uniformity and co-ordination of employment-office activities throughout the various provinces are obtained by having the Dominion's payments contingent upon an agreement ensuring that the provinces, in the conduct of their employment offices, shall endeavour to fill situations in all trades and occupations for both men and women, and that no charge shall be made to employers or employees for this service. Each province agrees to maintain a provincial clearance system in co-operation with the interprovincial clearance system established by the Dominion Government, in order to secure the necessary mobility of labour as between localities in the same province or in different provinces. For the fiscal year 1939-40, agreements were concluded with all of the provinces except Prince Edward Island. Thus a chain of employment offices reaching from Halifax to Vancouver, administered intra-provincially by the Provincial Governments but co-ordinated inter-provincially by the Dominion Government, constitutes the Employment Service of Canada. At the time the Act came into force only 12 provincial employment offices were operated in Canada. This number was steadily increased until, at the close of 1919, owing to the impetus given by the requirements of the demobilization period, offices were functioning at 84 different centres. Subsequent contractions have reduced the Service to offices permanently located at 76 centres (on Dec. 31, 1939), distributed by provinces as follows: Nova Scotia, 4; New Brunswick, 3; Quebec, 11; Ontario, 32; Manitoba, 4; Saskatchewan, 9; Alberta, 5; and British Columbia, 8.

**Operations of Employment Offices.**—Statistics covering the work of the local offices are collected and tabulated by the Employment Service Branch of the Department of Labour. During 1939 there were 787,972 applications for employment, 402,393 vacancies, and 384,882 placements recorded, as compared with 782,664 applications, 401,241 vacancies, and 382,295 placements in 1938. About 37 p.c. of the total placements were of a casual nature, many of these being the result of work given on a rotation basis by municipalities and Provincial Governments on various relief schemes throughout the year to persons who otherwise would have been unemployed.

**Reduced Railway Fares.**—In order to facilitate the movement of labour in cases where there are not enough workers in any one locality to fill the available vacancies, the Employment Service, by special arrangement with nearly all the members of the Canadian Passenger Association, has been granted the privilege of issuing certificates that entitle the bearers to purchase railway tickets at the reduced rate of 2.5 cents per mile. This rate is for second-class accommodation and is

applicable only to fares of not less than \$4. During 1939, 7,203 certificates were issued, 6,407 to persons proceeding to points within the same province as the dispatching office and 796 to workers going to points in other provinces. During 1938, 6,167 certificates for special rates were granted, 5,631 to persons travelling to employment within the same province as the dispatching office and 536 to persons for whom employment had been secured in other provinces.

#### 5.—Applications for Employment, Positions Offered, and Placements Effected by the Employment Service of Canada, 1931-39, and by Provinces, 1938 and 1939.

NOTE.—For figures by provinces from 1920 to 1937, see corresponding table of previous Year Books, commencing with the 1926 edition. Totals for the years 1920-30 are given at p. 766 of the 1938 edition.

**Registration of Workers for War-Time Industrial Employment.**—A conference of Dominion and provincial officials was convened in October, 1939, on the invitation of the Dominion Minister of Labour for the purpose of determining the policy to be pursued by the Employment Service of Canada in ensuring the maintenance of an adequate supply of skilled and semi-skilled workers for war-time industrial requirements. It was decided at this meeting that a nation-wide survey should be instituted to determine the availability of such labour.

For this purpose the Employment Service of Canada, in all provinces, carried out a voluntary registration of skilled and semi-skilled workers whose training and experience qualify them for employment in industries engaged in the production of war materials. Reports received to Feb. 29, 1940, show that 24,502 such workers have registered, 1,060 of this total being women.

At the request of the Department of National Defence, the Employment Service of Canada also compiled a registration of former members of the Royal Naval Air Service, the Royal Flying Corps, the Royal Air Force, and the Royal

Canadian Air Force who are willing to re-engage with the Royal Canadian Air Force as tradesmen. The number of ex-members of the Air Forces who had registered for this employment to Feb. 29, 1940, was 1,085.

As a matter of policy, the Department of National Defence has instructed its officers responsible for projects involving civilian personnel on construction and building maintenance to secure the necessary labour from the Employment Service of Canada. Already some requests of this character have been filled by the Employment Service.

### ESTIMATED EMPLOYMENT AND UNEMPLOYMENT OF WAGE-EARNERS<sup>1</sup> 1921 - 1939

<sup>1</sup> For figures on which this chart is based, see Table 1, p. 751.

#### Subsection 4.—Unemployment as Reported by Trade Unions.

Monthly statistics on unemployment are compiled and published by the Employment Service Branch of the Dominion Department of Labour, based on returns received from about 1,900 local trade unions, having an aggregate membership of approximately 250,000 workers. "Unemployment" as here used means involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or idle because of illness, are not considered as unemployed, while unions involved in industrial disputes are excluded from the tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentages of unemployment are based, it should be understood that the figures for each month have reference only to the reporting organizations. The maximum of unemployment in 1939 was in February, when the percentage stood at 16.4; the 1939 low was 9.0 p.c. recorded in October. In 1938 the December figure of 16.2 p.c. constituted the maximum, and the minimum of 10.4 p.c. was reached in September. Employment among organized workers was greater on the average in 1939 than in 1938, the average of the monthly figures of unemployment for 1939 being 12.2 p.c., while for 1938 the corresponding figure was 13.1 p.c.

### 6.—Percentages of Unemployment in Trade Unions, by Provinces, Half-Yearly, 1931-38, and by Months, 1939.

NOTE.—For percentages of unemployment at June 30 and Dec. 31 from December, 1915, to December, 1930, see p. 827 of the 1934-35 edition of the Year Book. For data by months from 1921, see successive issues of the Year Book commencing with the 1922-23 edition

## Section 4.—Measures for the Relief and Training of the Unemployed.

### Subsection 1.—National Registration of Persons on Material Aid.

The National Employment Commission Act, 1936, under which the National Employment Commission\* was established in May, 1936, required the Commission to undertake a national registration and classification of persons on aid throughout Canada [Sect. 6 (a)]. To meet this obligation there was set up the Registration Branch of the Commission, which, in co-operation with the governments of the provinces and municipalities, took a first national registration of persons on aid, where the Dominion contributed financially to such aid, in September, 1936. In order to secure current figures, comparable with those available for September, 1936, the provinces and municipalities were required to provide follow-up returns each month commencing with October, 1936. In September, 1937, a second registration was taken, based upon the experience of the previous registration, and this, too, was subsequently kept up to date month by month.

In Section III of its final report, the National Employment Commission recommended that the work of the registration be carried forward under the Minister of

\* See the 1937 Year Book, pp. 1052-1053, and the 1938 Year Book, pp. 778-779.

Labour, after the termination of the work of the Commission itself. Consequently, when the Commission ceased to exist at Feb. 1, 1938, the work of the registration was placed under the Department of Labour as the National Registration Branch, where it has been carried forward on the same basis; third and fourth national registrations, comparable with those of the two preceding years, were taken in September, 1938 and 1939.

From the commencement of the national registration, the number of local authorities throughout Canada issuing aid has averaged about 2,000; the success of the registration depends upon receiving complete and reasonably prompt returns from each of these authorities. Monthly reports, published by the Department of Labour, give detailed statistics as to numbers, classes, employability, etc., of persons on direct relief.

In addition to the registration of persons on material aid\* throughout the municipalities and provinces, special registrations have been maintained by the National Registration Branch of pensioners on aid, and of Indians on aid, through the Department of Pensions and National Health and the Indian Affairs Branch of the Department of Mines and Resources, respectively.

**Statistics of Persons on Aid.**—Prior to the inception of national registration, general statistics of persons in receipt of material aid were secured through reports furnished to the Dominion Commissioner of Unemployment Relief by the several provinces distributing aid. The Dominion monthly averages so reported up to the initiation of the national registration and the registration figures from September, 1936, are as follows: 1932 (8 months), 833,989; 1933, 1,227,558; 1934, 1,135,901; 1935, 1,162,563; 1936, 1,148,083; 1937, 965,907. Persons on urban aid constituted 72.8 p.c., while persons on agricultural aid were 27.2 p.c. of the monthly average Dominion total for 1939. The monthly average total of all persons on direct relief (as given in Table 7) showed the following percentage distribution by provinces in 1939: Prince Edward Island, 0.3 p.c.; Nova Scotia, 1.2 p.c.; Quebec, 19.7 p.c.; Ontario, 29.2 p.c.; Manitoba, 6.3 p.c.; Saskatchewan, 29.9 p.c.; Alberta, 5.7 p.c.; and British Columbia, 7.7 p.c.

Subsequent to Apr. 1, 1937, the Province of New Brunswick substituted a works program for material aid and consequently that Province does not contribute to the registration totals on material aid as shown in Tables 7 and 8, for the months after the date mentioned. Moreover, in the case of all provinces the present figures include only persons receiving aid to which the Dominion Government contributed financially.

An analysis of the status of the 629,246 persons receiving aid in December, 1939, reveals that 132,696, or 21.1 p.c., were heads of families,† 450,234, or 71.5 p.c., their dependants, while the remaining 46,316, or 7.4 p.c., were classified as 'individual persons'.† Of the 556,676 persons receiving urban aid, 119,202 were

\* Material aid refers only to direct relief, so that in the sense here used the term does not include persons being provided with work on relief projects paid for in wages, even though such work was undertaken to alleviate unemployment. Material aid is divided into urban aid and agricultural aid. Agricultural aid refers to assistance given to resident farm operators and their dependants for human subsistence, where such farmers would normally derive their livelihood from the land they occupy. Urban aid refers to all persons other than farm operators and their dependants, and thus includes the unemployed and unemployable persons.

† 'Head of family' is used to designate a person who is socially responsible for the support of one or more dependants. An 'individual person' is one who is neither a dependant of a head of family nor has anyone dependent upon himself. The term 'wife' refers to the member of a family unit who performs the housekeeping duties and 'wives' are a subclassification of dependants. 'Dependants' are all who look to the head of a family for their support and thus 'dependants' include some adult employable persons still living under the parental roof.

heads of families, of whom 93,720 were fully employable, 13,490 partially employable, and 11,992 were unemployable. Of the 44,704 recipients classified as individual persons, 21,666 were returned as fully employable, 11,318 as partially so, and 11,720 as unemployable. Of the dependants of heads of families, totalling 392,770 receiving urban aid, 10,403 had been previously gainfully employed, 21,077 had never been employed, 544 were only partially employable, and the remainder were classified as 'non-worker type dependants', including wives, children under 16 years, and other dependants of non-worker type over 16 years of age.

In considering the question of unemployment, public attention is usually focussed on the fully employable worker who is receiving urban aid. For the first ten months of 1939, unemployment among persons of this class was greater in each month than in the corresponding month of 1938. The seasonal increase in unemployment in autumn invariably results in an increase in the number receiving aid in November and December. The percentage increase in the number receiving aid in these months in 1939 was considerably less than for the same months of 1938 and 1937. The existing state of war and the consequent acceleration of industrial production for war purposes no doubt was largely responsible for the improved situation at the close of 1939.

### Subsection 2.—Unemployment Relief.

The assistance rendered by the Dominion Government under relief legislation enacted during the years 1930-38, inclusive, is set out in previous issues of the Canada Year Book. The following is a summary of the new legislation enacted in 1939 and the assistance rendered under these Acts to Mar. 31, 1940.

#### THE UNEMPLOYMENT AND AGRICULTURAL ASSISTANCE ACT, 1939.

This statute, the administration of which is vested in the Minister of Labour, contains provisions similar to those provided by its predecessor, the Unemployment and Agricultural Assistance Act, 1938. A résumé of this Act is given in Chapter XXX, under Dominion Legislation. The Act expired on Mar. 31, 1940, but provision is made therein that any obligation or liability incurred under its authority may be paid and discharged notwithstanding the expiration of the Act.

**Material Aid.**—Under the provisions of the above Act, agreements were entered into with all provinces providing for a Dominion contribution towards the cost of material aid (food, fuel, clothing, and shelter, or cash in lieu thereof) on a dollar for dollar basis with the provinces up to a maximum Dominion contribution of 40 p.c., the remainder to be contributed by the municipalities. The agreements further provided for a Dominion contribution of 50 p.c. of the provinces' expenditures for material aid supplied to individuals who were in necessitous circumstances and had not established provincial residence, and also to individuals in necessitous circumstances who had provincial residence in one province but at the time of need resided in another province.

An Order in Council dated Oct. 21, 1939, authorized Dominion expenditures for food, fuel, clothing, shelter, and health services supplied to any residents in Canada who were necessitous dependants of enemy aliens interned in Canada, if such services were supplied during a term or terms of internment falling within the Dominion fiscal year 1939-40 and were on a scale not exceeding that given by governmental or municipal agencies to necessitous persons in the locality where said dependants resided. Arrangements were made with the provinces whereby, in cases where the municipality or, in any district where no municipal organization existed, the province distributed assistance to such persons, the Dominion is to reimburse the province and/or the municipality through the province for expenditures incurred.

**Municipal Improvement Projects.**—The agreements entered into with all the provinces respecting material aid, with the exception of that entered into with the Province of Ontario, contained an alternative to material aid by providing for a Dominion contribution of 50 p.c. of the direct labour costs incurred in the carrying out of approved municipal improvement projects during the fiscal year 1939-40, it being provided that the provinces would also contribute 50 p.c. of the direct labour costs, the municipalities bearing the costs of materials and supervision. Projects must be undertaken primarily to relieve unemployment.

The agreements provided that the Dominion contribution should apply only to wages paid to unemployed persons in necessitous circumstances, and that such persons should, as a condition precedent to their employment on authorized projects,

be certified as unemployed and in necessitous circumstances by a committee consisting of a representative of the Dominion, a representative of the province, and the municipal official charged with the administration of relief. In municipalities of less than 5,000 persons provision was made for a substitute for the committee when jointly approved in writing by the province and the Dominion.

Under the terms of the agreements all persons employed on municipal improvement projects must be paid fair wages. The maximum number of hours per day to be worked by any individual is restricted to eight, which number, in certain circumstances, may be exceeded provided that in no instance may any employee be required to work more than 48 hours per week over a period of 3 consecutive calendar weeks.

**National Forestry Program.**—To supplement the work carried on under the Youth Training Program, referred to later in this summary, the Dominion Government provided a special vote of \$1,000,000 for the National Forestry Program. Part of this money was allotted to the provinces for forestry projects to be carried on in co-operation between the Dominion and the provinces. The balance of the money was made available to the Dominion Department of Mines and Resources for work to be carried on in National Parks and Forest Experiment Stations under the direction of the Dominion Forest Service.

All provinces participated in this program and employment was afforded to over 4,600 unemployed young men between the ages of 18 and 25. The first camps were opened about the beginning of June and, with a few exceptions, were closed by the end of November. While the rate of training allowance was not the same in each province, the usual rate was \$1 per day worked, with board, lodging, and medical services provided free. All trainees were medically examined before admission to the project.

Provision was made for classes not only in technical instruction in forestry subjects, care and use of tools and mechanical equipment, but also in a variety of other subjects including first aid, health, citizenship, organized recreation, and sport.

In addition to work done in forest protection and development, and the development of tourist facilities, instruction was given in the conservation of wild life.

**Transportation Facilities into Mining Areas and Development of Tourist Highways.**—The Department of Mines and Resources entered into agreements with all the provinces (under the provisions of the Unemployment and Agricultural Assistance Act, 1939) to provide for a Dominion contribution towards the costs of certain works projects submitted by the provinces as suitable for relieving the unemployment situation and which would, as well, provide for (1) transportation facilities into mining areas; and (2) the development of tourist highways.

Mining transportation programs submitted resulted in arrangements for such works projects being entered into with all the provinces except Prince Edward Island and New Brunswick. Where any province has undertaken to give financial aid to projects for the improvement of transportation facilities into mining areas, the Dominion Government has agreed to reimburse the province to the extent of two-thirds of the provincial expenditure on the approved project.

Agreements entered into provided for Dominion assistance in developing tourist highways, along the lines of programs submitted by all the provinces except Quebec. The Dominion assistance granted for tourist road projects was 50 p.c. of the costs of construction of approved projects, except in Manitoba and Saskatchewan. In these two provinces the Provincial Governments desired to undertake

larger programs than could be carried out under the 50 p.c. ratio, and arrangements were made whereby the Dominion would contribute 20 p.c. of the costs of construction of the approved projects in Saskatchewan and 33 $\frac{1}{3}$  p.c. of the costs of the accepted projects in Manitoba.

Provision was made in the agreements that, except in such instances as the Minister of Mines and Resources, or his Deputy, decided it was impracticable or inconsistent with reasonable efficiency and economy to do so, the provincial authorities would enforce a stipulation that "at least 50 p.c. of those employed shall, if possible, be men who are relief recipients or those who, but for such employment, would otherwise be in receipt of relief". A further stipulation required that first consideration be given to those most in need in localities where works were to be performed, preference in employment being given to unemployed ex-service men and unemployed married and single men with dependants. Special provision was made in the agreement with British Columbia for the employment of a percentage of 'single unemployed' in connection with the work on tourist highways in that Province.

**Aid in the Drought Areas.**—The agreements under which the Dominion, through the Department of Agriculture, met the cost of material aid and feed and fodder relief in the drought areas of Saskatchewan and Alberta for the year 1938-39, terminated as at Mar. 31, 1939. With the coming of spring the need for feed and fodder relief was reduced but assistance was required by the Province of Saskatchewan for seeding operations. The Dominion agreed to contribute \$200,000 and to loan an additional \$1,300,000 for seed and seeding supplies. Seeding supplies included tractor fuel, feed and fodder, and repairs to implements and harness. Material aid was also required in parts of Saskatchewan until the returns from the 1939 crop were within reach, and the agreement relating to it was, therefore, renewed for the period Apr. 1 to June 30 and was later extended to the end of August. An amount of \$1,404,263 was expended under the agreement for the five-month period. As direct Dominion assistance to such parts of the Prairie Provinces as might experience adverse crop conditions was to take the form of acreage payments under the Prairie Farm Assistance Act as from Dec. 1, 1939, drought area relief, as such, ceased at Aug. 31 and the "drought areas" were dealt with, like other rural relief areas, under the material aid agreements with the provinces. Payments under the Prairie Farm Assistance Act were intended to eliminate the need for material aid after Dec. 1 in the townships of low wheat yields where the Act became applicable.

In addition to the material aid and seeding assistance, carried out under the Act, the Dominion Government purchased and distributed a quantity of apples, at a cost of approximately \$87,500, to supplement the food purchases of those affected by adverse crop conditions. This helped to reduce a surplus of apples that has resulted from the loss of normal markets through the outbreak of war.

**Single Unemployed Persons.**—Owing to the lateness of the spring season, the agreements respecting the Farm Employment Plan entered into with the western provinces under the Unemployment and Agricultural Assistance Act, 1938, were, at the request of the provinces, extended under the Unemployment and Agricultural Assistance Act, 1939, to cover the period Apr. 1 to May 31, 1939. No payment was made to the farmer for these months and the allowance to the worker was \$7.50.

The agreements entered into under the 1938 Act with the Provinces of British Columbia and New Brunswick, respecting works undertaken as a supplementary means of providing employment for those single unemployed persons deemed unsuitable for farm work, were also, at the request of the provinces, extended under the 1939 Act.

In order to meet the problem of the single and transient unemployed, the Farm Employment Plan, the cost of which is shared jointly between the Dominion and the Provincial Governments, was again placed in operation in British Columbia, Alberta, and Manitoba from Oct. 1, 1939, to Mar. 31, 1940.

The arrangements covered by the agreements provided for the payment to the farmer of \$5 per month in Alberta and British Columbia but no payment was made to the farmer in Manitoba, while those accepting employment under the plan in the three provinces received \$5 per month with an additional bonus of \$2.50 per month where continuous employment was maintained up to Mar. 31, 1940, plus free transportation, and a clothing allowance, where necessary, not exceeding \$3.

In addition to the Farm Employment Plan, and in order to meet the peculiar needs of British Columbia, where agriculture does not lend itself to the absorption of large numbers of men, the agreement of Nov. 8, 1938, was renewed and provision made for a Dominion contribution of 50 p.c. towards the cost of forestry and other works undertaken by the Province as a supplementary means of providing employment. The agreement covered the period from Apr. 1, 1939, to Mar. 31, 1940. To ensure that the men, on completion of the work, would not be without funds, a system of deferred payment was placed in operation, wages were payable at specified post offices, the amount of money standing to the credit of any man on the completion of the work being paid in weekly instalments of \$4.

**Rehabilitation of Older Unemployed.**—At the 1939 session of Parliament, funds were appropriated for the purpose of restoring the skill, physique, and morale of those who, through continuous unemployment, experienced difficulty in establishing themselves. The Dominion offered to contribute 50 p.c. of the cost of such rehabilitation plans. Agreements have been signed and various plans have been undertaken in British Columbia, Alberta, Saskatchewan, Manitoba, Ontario, New Brunswick, and Nova Scotia.

**Re-Establishment of Settlers.**—Another activity administered by the Department of Agriculture under the Unemployment and Agricultural Assistance Act, 1939, was the re-establishment of settlers in the Provinces of New Brunswick, Saskatchewan, Alberta, and British Columbia. This was a continuation of the policy of previous years, the agreements with the four provinces, arrived at under the 1937 Act, being extended with slight modifications in one or two instances. The program is designed to assist settlers in pioneer areas to become self-sustaining and expenditures under the agreements are made chiefly for the breaking and clearing of land and the purchase of building materials, farm implements, and live stock. The amounts made available under the agreements for the year 1939-40 were: New Brunswick, \$30,000; Saskatchewan, \$250,000; Alberta, \$75,000; and British Columbia, \$15,000.

**Relief Settlement.**—The Dominion continued to assist the Provinces of Quebec, Manitoba, and Alberta in placing selected families that would otherwise be in receipt of material aid on the land under the Relief Settlement Plan outlined on p. 762 of the 1937 Canada Year Book.

**THE YOUTH TRAINING ACT, 1939.**

The operation of the Dominion-Provincial Youth Training Program during its third year, was facilitated by the passing of the Youth Training Act, 1939. By this Act provision was made for a Dominion contribution for youth training of \$1,500,000 a year for a period of three years, with the provision that any money unexpended in one fiscal year could be carried over and made available for the next fiscal year.

Those eligible to participate in youth-training projects under the Act were young people aged 16 to 30 who were not gainfully employed and whose families were not in a position to pay for the cost of training.

As in past years, the program was carried out under agreements between the Dominion and the Provincial Governments that provided for a Dominion contribution of 50 p.c. of the expenditures incurred for projects submitted by the provinces and approved by the Dominion; each government bears its own administrative costs.

Agreements were signed with all the provinces providing for the undertaking of the following main types of projects: forestry and woodlot cultivation; mining and prospecting; industrial apprenticeship and learnership; training of urban young men and women for work in industrial and commercial establishments; home service training for women; handicraft and homecraft classes for rural young women; general and specialized courses in agriculture for rural young men and women; air mechanics; physical recreation and training; farm apprenticeship; and student aid.

The agricultural and rural classes and the physical recreational projects were not designed to train young people for wage-earning employment, and consequently, no placements in wage-earning employment were made from these trainees.

To assist in placing the trainees from the other projects, special placement officers and project supervisors were engaged, not only to advise young people concerning their choice of training, but also to place them in employment upon completion of training. The placements so made were about 50 p.c. in excess of those made in the previous year, and approximately 5,500 were placed between Apr. 1, 1939, and Jan. 1, 1940. In addition to these, a great many of the trainees (the number of whom is not known) found employment through their own efforts.

Among the new projects for the year were classes for air mechanics and the introduction of student aid. The former were started in June of 1939, and were

originally designed to train young men either as ground craftsmen in the R.C.A.F., and civil aviation, or for aircraft manufacturing. After the outbreak of war the enrolment was confined to young men who planned to enlist in the R.C.A.F. The course of training followed in each of the ground trades is that prescribed by the R.C.A.F., and all trainees underwent the prescribed medical examination. This project is in operation in six provinces.

Student aid was suggested to the provinces by the Dominion in April, 1939, and was accepted by the four western provinces and Prince Edward Island. Equal contributions are made by the Dominion and the provinces to assist students of proven academic merit but who are in financial need, to enter upon, or to continue with, a course of study leading to a degree in a recognized university or affiliated college. The maximum amount of assistance per individual must not exceed \$200 in the academic year and the average amount in each province must not exceed \$150. No form of work is required from the student in return for this assistance. Students to benefit are selected by a committee appointed by the university concerned.

The physical recreation and training project was greatly extended during the year and is now operating in the four western provinces and in New Brunswick, over 450 centres for men and women having been established.

Following the outbreak of the war, certain changes were effected in some of the projects and an effort was made to give special emphasis to training young people for skilled occupations as machinists and fitters, motor mechanics, and sheet-metal workers and welders, all of which are important in industries producing war materials. Classes were also carried on in radio servicing, wireless operating, and wood working. Assistance was continued in training apprentices or learners for industry by any of the three following methods: (1) the establishment of trade classes; (2) the provision of technical instruction in subjects related to the apprenticeship trades; and (3) the refunding to the employer of a certain percentage of the wage paid by him to a learner who entered his employment under an agreement providing for definite instruction in the occupation chosen and retention in employment as long as work was available and his or her services were satisfactory.

Only a limited number of learners were allowed to each employer, who agreed that the engagement of the learners would not displace any of the existing staff.

In addition to eighteen home service training schools, classes for young women were carried on as follows: commercial refresher; waitresses; retail selling; home and convalescent aid; dressmaking; power sewing machine operating; handicrafts, such as knitting and weaving; and other specialized forms of work in connection with the home.

A wide range of classes was held for rural young people. The curricula of the general agricultural classes were modified from time to time to fit in with the policies of the various Departments of Agriculture concerning war production work. These classes varied from periods of 2 weeks to 5 months. Specialized agricultural classes were held covering egg and poultry grading, poultry raising, bee-keeping, fur farming, dairying, and farm mechanics.

Technical and practical instruction in mining and prospecting was given in Nova Scotia, New Brunswick, Quebec, Manitoba, and British Columbia. In Nova Scotia and Quebec the training was given through the actual operation of a gold mine by groups of apprentices under the direction of skilled miners and supervisors.

Claims received from the provinces and paid under the Youth Training Act, 1939, as at Mar. 31, 1940, aggregated \$476,025.

The amount of \$374,629,000 has been spent by the Dominion Government under Relief Legislation from 1930 to Mar. 31, 1940, including disbursements under the Youth Training Act, 1939.

## Section 5.—Organized Labour in Canada.

The Dominion Department of Labour publishes annually a report on labour organization in Canada. This report outlines the composition and development of the various organizations of wage-earners in the Dominion and gives statistical and other information respecting membership, benefits, registration of trade unions, etc.

**Total Reported Membership of Organized Labour in Canada.**—The numerical strength of organized labour in Canada at the close of 1938 is given by the Department of Labour as follows: international organizations, 2,086 local branches, with an aggregate membership of 230,547; Canadian central labour bodies, 878 branches and 91,764 members; independent units, 62 branches and 12,540 members; National Catholic unions, 292 branches and 50,188 members; grand total, 3,318 local branches and 385,039 members. As compared with 1937, this represents an increase of 60 branches and 420 members.

## 11.—Membership of Trade Unions in Canada, 1911-38.

**Main Labour Groups.**—The following paragraphs outline the main groups into which Canadian labour organizations now fall.

*Trades and Labour Congress of Canada.*—The Trades and Labour Congress is representative of the international trade union movement in the Dominion, the bulk of its membership being drawn from the international organizations that have local branches in Canada. An affiliated membership of 159,087 was reported for the Trades and Labour Congress of Canada. Of the 1,764 local unions reported to be in affiliation with the Congress, 1,614 made returns, showing a combined membership of 157,667. An audit was made of the membership of the Congress and revealed a paid-up membership of 141,875 as at Dec. 31, 1938.

*All-Canadian Congress of Labour.*—The All-Canadian Congress of Labour was organized in Montreal, Mar. 16, 1927, by representatives of national and independent organizations. As at Dec. 31, 1937, the Congress reported an affiliated membership of 30,855. Of the 287 local unions reported to be in affiliation with the Congress, 269 made returns, showing a combined membership of 26,131. The audit of the membership figures revealed a paid-up membership of 22,269.

*Canadian Federation of Labour.*—This organization was brought into being at a conference held in Winnipeg, Man., on Oct. 24, 1936. The central organizations in affiliation with the Federation reported 59 local branch unions. All of these locals were circularized by the Department but only 38 made returns, showing a combined membership of 8,500. The audit of the membership revealed a paid-up membership of 51,600.

*Confederation of Catholic Workers of Canada.*—In 1918 a conference of National Catholic Unions, which were first established in 1901, was held in Quebec City, followed by other meetings in Three Rivers in 1919 and in Chicoutimi in 1920. The delegates at the last-named conference, numbering 225 and representing 120 unions, decided to establish a permanent central body to co-ordinate the work of the scattered units. Accordingly, at the 1921 conference held in Hull, at which approximately 200 delegates representing 89 unions were present, a constitution to govern the new body was approved. The name selected was "Confederation of Catholic Workers of Canada", and permanent officers were elected, the constitution and by-laws becoming effective on Jan. 1, 1922. For 1938, the Confederation reported an affiliated membership of 49,401. Of the 292 local unions reported to be directly or indirectly affiliated with the Confederation, 205 made returns showing a combined membership of 42,869. The audit of the membership figures revealed a paid-up membership of 15,923.

**International Trade Unions Operating in Canada.**—Table 12 gives the names of the 98 international labour organizations that now carry on operations in Canada and also shows the number of branches in existence in the Dominion at the close of 1938 and the reported total membership in Canada of each organization. Details regarding affiliations are given in the "Twenty-Eighth Annual Report on Labour Organization", compiled and published by the Dominion Department of Labour, which may be obtained from the King's Printer, Ottawa, at a price of 50 cents per copy.

<sup>1</sup> No branches reported in Canada.

Table 13 shows the numbers of branches and the reported total membership of Canadian central labour bodies operating in Canada at the close of 1938. At the foot of the table are shown the statistics of the National Catholic and independent unions, thus giving a grand total of all Canadian unions that have no affiliation with the international movement. When these figures are added to the totals of internationally affiliated unions shown in Table 12, the result corresponds to the total labour union membership in Canada as shown at p. 770.

**Canada and the International Labour Organization.\***—The International Labour Organization of the League of Nations was set up in 1919 in accordance with Part XIII of the Treaties of Peace to promote the improvement of industrial conditions by legislative action and international agreement.

The Organization comprises the International Labour Conference, which meets annually and is composed of four representatives of each Member State, two of whom are Government delegates, while two represent employers and workers, respectively, and the International Labour Office in Geneva, which functions as a secretariat of the annual conference and also collects and publishes information on subjects relating to industrial life and labour. The Office is under the control of a Governing Body, consisting of 32 persons appointed by the International Labour Conference, of whom 16 represent governments, 8 represent employers, and 8 represent workers. In addition to its control of the Labour Office, the Governing Body is charged with the preparation of the agenda of the annual conference.

\* On this subject see also the 1921 Year Book, pp. 607-609; the 1922-23 Year Book, pp. 704-707; and the 1924 Year Book, pp. 666-670.

Under the terms of the Peace Treaties, 8 of the government seats on the Governing Body are held by the countries of "chief industrial importance". Canada has been designated as one of these 8 States of chief industrial importance. There are at present 55 countries comprised in the membership of the International Labour Organization, including nearly all of the industrial States of the world. Germany and Italy ceased to be members of the Organization in October, 1935, and in December, 1939, respectively, and the withdrawal of Japan will become effective in November, 1940. The League of Nations expelled Russia from its membership following the invasion of Finland, and the Governing Body, at its meeting in February, 1940, took similar action in connection with Russia's membership in the International Labour Organization, at the same time according representation on the Governing Body to Belgium and the Netherlands to replace the Italian and Russian vacancies.

Mr. Hume Wrong, the Permanent Delegate of Canada to the League of Nations, Geneva, represents the Government of Canada at the meetings of the Governing Body of the International Labour Office. At the triennial election of the Governing Body in 1937, Mr. P. M. Draper, the President of the Trades and Labour Congress of Canada, was elected as a deputy member of the workers' representatives on this body.

Canada is also represented on the following committees of technical experts that have been set up by the International Labour Office: Mixed Advisory Agricultural; Permanent Agricultural; Management; Public Works; Accident Prevention; Social Insurance; Automatic Coupling; Industrial Hygiene; Workers' Spare Time; Joint Maritime Commission; Women's Work; Statistical Experts; and Unemployment Insurance and Placing. Some of these experts and specialists are specially qualified to represent the interests of certain categories of workers; others are intended rather to aid the Office in various fields of scientific research.

The International Labour Office is being continually looked to from different parts of the world for information and guidance in respect of industrial, social, and labour information. At a meeting of the Emergency Committee (which has been set up to act in the place of the Governing Body, owing to the difficulty at present of the latter's meeting as a whole), both the employer and worker representatives joined with those of the Governments in urging that the functions of the Office should be maintained as fully as possible during the War. Meetings of technical experts which had been scheduled to be held in Geneva during the autumn had to be cancelled, owing to the outbreak of hostilities.

The conclusions of the International Labour Conference are cast in the form of draft conventions or recommendations, addressed to the national governments that comprise the membership of the International Labour Organization. A two-thirds majority of the Conference is required for the adoption of either a draft convention or a recommendation. Under the terms of the Treaties of Peace, the Member States are bound to bring the draft convention or recommendations before the authority or authorities within whose competence the subject matter lies, for the enactment of legislation or other action. Thus the findings of the Conference become binding on the various countries concerned only if and when action regarding them is taken by the latter.

Twenty-five sessions of the International Labour Conference have been held since its inception in 1919. Sixty-seven draft conventions and 66 recommendations

have been adopted at these annual gatherings. The draft conventions and recommendations of the Conference have, among other subjects, related to the following: hours of labour; measures for the avoidance of unemployment; employment conditions of women and children; employment conditions of seamen; employment in agriculture; weekly rest; statistics of immigration and emigration; principles of factory inspection; inspection of emigrants on board ship; workmen's compensation for accidents and occupational diseases; social insurance; minimum wages; prevention of accidents to dockers; forced labour; holidays with pay; and regulation of hours of work of salaried employees and of workers in mines, manufacturing industries, road transport, and agriculture.

Up to December, 1939, 849 ratifications of these conventions had been registered with the League of Nations, of which 12 were conditional or with delayed application; 56 had been approved by the competent national authority; and 138 had been recommended to the competent national authority for approval.

*Canadian Action on Draft Conventions and Recommendations.*—Nine draft conventions in all have been ratified by the Dominion, namely, those relating to: (1) minimum age for employment of children at sea; (2) unemployment indemnity for seamen in case of the loss or foundering of a ship; (3) minimum age for employment as trimmers and stokers; (4) medical examination of children and young persons employed at sea; (5) seamen's articles of agreement; (6) marking of the weight on heavy packages transported by vessels; (7) limitation of hours of work in industrial undertakings to eight in the day and forty-eight in the week; (8) weekly rest in industrial undertakings; and (9) creation of minimum wage-fixing machinery. The first four of these conventions were ratified in March, 1926, following the adoption of legislation by Parliament to give effect to the proposals that were respectively involved. The next two were ratified in June, 1938, legislation to implement them having been embodied in the Canada Shipping Act, 1934. The latest three conventions were ratified in March, 1935, following the adoption of legislation by Parliament on these respective subject matters, i.e., hours of labour, weekly rest, and minimum wages. Doubts having arisen as to the legal competence of the Dominion Parliament to deal with these matters, a reference was submitted to the Supreme Court of Canada, which was later carried in appeal to the Judicial Committee of the Privy Council. The judgments of the latter body, given in January, 1937, were to the effect that all three of these statutes were *ultra vires* of the Parliament of Canada.

At the 1935 session of Parliament a resolution was also adopted approving of another draft convention of the International Labour Conference, namely, that relating to safety of workers engaged in loading and unloading ships, with a view to its subsequent ratification. This convention, however, has not been ratified to date.

## Section 6.—Industrial Accidents and Workmen's Compensation.

### Subsection 1.—Fatal Industrial Accidents.

Statistics of fatal industrial accidents have been compiled by the Dominion Department of Labour since 1903, the data being obtained from provincial Workmen's Compensation Boards, the Board of Railway Commissioners for Canada and various other governmental authorities; from departmental correspondents; and from press clippings.

<sup>1</sup> Figures subject to revision.

**Causes of Fatal Accidents.**—The classification of fatal accidents in 1939, by causes, shows that the largest number, 291, came under the category “by moving trains, vehicles, etc.”. This includes all accidents caused by cars or engines, including mine and quarry cars, and to automobiles and other power vehicles and horse-drawn vehicles, as well as moving implements, water craft, and aircraft.

“Falls of persons” caused 194 fatalities, including those who fell into pits, shafts, holds of vessels, harbours, rivers, etc. Next in order as a cause came “falling objects”, 174 in number. Other fatalities, by cause, were: 142 caused by dangerous substances, including electric current, explosives, hot and inflammable substances, gas fumes, boiler explosions, etc.; 33 by the handling of heavy or sharp objects; 29 caused by animals, including 22 by horses; 28 caused by striking against or being struck by objects; 23 caused by hoisting apparatus; 21 caused by working machines; 13 by prime movers; and 3 by tools. The category “other causes” includes 80 fatalities: 38 were the result of industrial disease, strain, etc., 19 of lightning, frost, storms, and sunstroke, 11 of cave-ins, landslides, ice-jams, etc., 9 of shooting and violence, 1 of drowning not elsewhere classified, and 2 for which no particulars are available.

Numbers of industrial accidents, fatal and non-fatal, dealt with by the various provincial Workmen's Compensation Boards, are included in Subsection 2, below, dealing with workmen's compensation.

**Subsection 2.—Workmen's Compensation in Canada.**

An account of the development of workmen's compensation legislation in Canada from employers' liability legislation is given at pp. 744-746 of the 1927-28 Year Book, while a summary of the legislation with regard to workmen's compensation, including a statement of the scale of compensation in each province, as at Jan. 1, 1938, appears in the general sketch of labour legislation in Canada at pp. 795-796 of the 1938 edition.

**Operations of the Workmen's Compensation Boards.\*—Nova Scotia.**—The Workmen's Compensation Act was passed in 1915, but became effective only on Jan. 1, 1917. During the twenty-three years between that date and Dec. 31, 1939, 182,260 accidents were reported to the Board of which 167,305 were compensated. Prior to Jan. 1, 1920, medical aid was furnished in special cases only.

\* Obtained through the courtesy of the respective provincial authorities.

### 15.—Compensation and Medical Aid Paid, and Accidents Compensated by the Nova Scotia Workmen's Compensation Board, 1930-39.

NOTE.—Estimates for outstanding claims not included. Statistics for the years 1917-29 are given at p. 757 of the 1938 Year Book.

*Quebec.*—The Quebec Workmen's Compensation Commission was established in 1928 by authority of cc. 79 and 80 of the Statutes of that year. The Act was brought into force by proclamation on Mar. 22, 1928, operations of the Commission commencing as of Sept. 1, 1928. Under this Act, the Quebec Commission did not insure employers against their liability. On Apr. 4, 1931, a new Act (21 Geo. V, c. 100), effective Sept. 1, 1931, provided for state insurance, practically along the same lines as the Workmen's Compensation Act of Ontario. Amendments were made to this legislation in 1933, 1935, 1936, 1937, and 1938.

*Ontario.*—Under the system operated by the Ontario Workmen's Compensation Board in Schedule 1, where the liability is collective, 24 classes of industries pay various percentages of their payrolls annually to the Board, and escape individual civil liability for accidents and certain specified industrial diseases. The percentage of payroll collected by the Board is graded according to the degree of hazard in the occupation and ranged, in 1939, from 15 cents per \$100 of payroll in needle trades to \$10 in window cleaning. The average for all classes was \$1.06 per \$100 which amounted to \$530,262,800. Certain other industries under Schedule 2, including municipal undertakings, railways, car shops, telegraphs, telephones, etc., are made individually liable to pay the rates of compensation fixed under the Act. Employees of the Dominion or of the Province, killed or injured in the discharge of duty, are by special legislation placed on the same footing as those of private employers of the second class.

During the year 1939, 54,405 accidents were paid for, including 237 cases of death, 988 of permanent disability 23,213 of temporary disability, and 29,967 in which medical aid only was provided; the latter are all under Schedule 1, as medical aid for Schedule 2 cases and Crown cases is furnished directly by the employer.

### 18.—Compensation and Medical Aid Paid, and Accidents Reported by the Ontario Workmen's Compensation Board, 1930-39.

NOTE.—Statistics for the years 1915-29 are given at p. 759 of the 1938 Year Book.

*Manitoba.*—Under the Workmen's Compensation Act, effective Mar. 1, 1917, Part I of the Act, dealing with workmen in hazardous occupations, is administered by the Workmen's Compensation Board, which charges insurance rates according to the hazard of the industry, the sums received by the workman being in lieu of the rights of action previously existing. The Province, the City of Winnipeg, and certain corporations operating public utilities are permitted by the law to practise self-insurance.

The Workmen's Compensation Board also administers the provisions of the Dominion Act respecting payment of compensation of employees of His Majesty who are killed or suffer injuries while performing their duties, under c. 15 of the Statutes of 1918 and subsequent amendments. The figures given below cover accidents dealt with under both provincial and Dominion legislation.

From the date of the coming into force of the Manitoba Workmen's Compensation Act to Dec. 31, 1938, the Board has dealt with 137,587 compensable accidents and paid out \$17,371,178 for compensation and medical aid. Of the accidents in 1938, 5,089 involved medical aid costs only, 4,004 involved temporary and 205 permanent disability, while 33 resulted in death.

*Saskatchewan.*—The Workmen's Compensation (Accident Fund) Act became fully effective July 1, 1930, and covers practically all employees in the Province except railway employees engaged in the running trades, casual workers, farm and ranch labourers, domestic and menial servants, janitors, retail-store employees, and persons who cannot be classed as workmen.

The Act is administered by a Board of three and imposes compulsory collective liability on the employers concerned. The schedule of benefits is similar to that provided by other compensation Acts.

*Alberta.*—The Workmen's Compensation Act of 1918 became effective Aug. 1, 1918, as regards mining, and Jan. 1, 1919, in respect of almost all industries except agriculture, railroading, and the operation of retail stores and offices. Railroading (except for the running trades) was brought within the scope of the Act in 1919, and a further amendment in 1928 left only conductors and trainmen exempt from the operations of the Act.

The amounts shown in Table 21 do not include sums transferred to the pension fund, nor do they include administration expenses nor sums set aside to cover estimated liabilities. The numbers of accidents compensated, shown in the last column, do not include claims disposed of by payment of accounts for medical aid only.

*British Columbia.*—The Workmen's Compensation Act, effective Jan. 1, 1917, provides compulsory accident insurance in almost every industrial occupation carried on in the Province. Insurance rates levied against employers are graded according to the hazard of the industry. All employers under the Act are required,

in addition, to deduct one cent per day or part thereof from the wages of each employee and to remit this money to the Board to the credit of the medical aid fund. This fund provides all necessary medical, surgical, and hospital expenses for injured employees.

**Section 7.—Strikes and Lockouts.**

Statistics of strikes and lockouts in Canada have been collected by the Dominion Department of Labour since its establishment in 1900.

The items in the columns headed "Time Loss in Man-Working Days" in Tables 23-25, are calculated by multiplying the number of persons directly involved in strikes and lockouts by the number of working days they are so affected during the time the disputes are in existence.

Summary tables of the figures with details as to strikes and lockouts during 1939 will be found in the *Labour Gazette* for March, 1940, pp. 211-231.

**Industrial Disputes in Recent Years.**—From 1931 to 1937 the figures as to numbers of strikes and lockouts, numbers of employees involved, and time loss were substantially greater than during the period 1926 to 1930, but were still much lower than during the years prior to 1926 when coal-mining strikes involved large numbers of employees and resulted in great time loss. In 1938 figures were about the same as the average for the period 1926-30 but in 1939, even with fewer strikes than in 1938, twice as many workers were involved with a corresponding increase in time loss. Since 1931 most of the important disputes have been in clothing manufacturing, logging, sawmilling, and woodworking industries, with a substantial number in coal mining. In 1939 almost half of the time loss was due to coal-mining strikes, chiefly in Nova Scotia. The largest strike of the year in regard to time loss was that of employees of three rubber factories at Kitchener, Ont. An outstanding dispute was that of fish handlers at Loqkeport, N.S. Other important strikes were those of coal miners at Blairmore, Alta., coal miners at Estevan, Sask., gold miners at Pioneer, B.C. (unterminated at end of year), knitting factory workers at Brantford, Ont., and knitting and woollen factory workers at St. Jérôme, Que.

In 1939 the important strikes by industries were located in the provinces as follows: in Ontario in rubber, knitted goods, cotton manufacturing, and sheet metal industries; in Quebec in men's clothing, and knitted and woollen goods industries; in Nova Scotia in coal mining, trade (fish handling and automobile service stations), and steel manufacturing; in New Brunswick in shipbuilding; in Saskatchewan and Alberta in coal mining; in British Columbia in gold mining and lime manufacturing.

In 1938 the most important strikes and lockouts occurred in manufacturing (mainly in textiles, clothing, etc.; metal products; and miscellaneous wood products), mining, transportation and public utilities, and fishing and trapping; and during 1939 in manufacturing (mainly rubber products; textiles, clothing, etc.; and metal products), mining, and trade.

**Causes and Results of Industrial Disputes.**—In each of the years since the record was begun in 1901, by far the most important cause of disputes has been changes in wages, but since 1936 union questions (chiefly union recognition, the

discharge of workers for union activity or membership, the employment of union members only) have led to many strikes and caused about 40 p.c. of the total time loss. In 1939, changes in wages, as usual, caused the largest number of strikes, but union questions were again responsible for many strikes and 50 p.c. of the total time loss. An unusually large number were due to other causes affecting wages and working conditions, chiefly in coal mining.

Approximately one-third of all disputes were settled by direct negotiations, one-third by conciliation or mediation, and one-third by the return of workers. This shows a large increase in the number of disputes settled by conciliation and arbitration compared with years previous to 1938, when negotiations ended about one-half of all disputes. As for results, the figures show that about one-fourth of the workers directly involved were successful, that over one-third were partially successful, and the remainder were unsuccessful.

## Section 8.—Wage Rates and Earnings.

### Subsection 1.—Wage Rates and Hours for Various Classes of Labour in Canada.\*

Statistics of rates of wages and hours of labour have been collected for recent years by the Dominion Department of Labour, and are published in a series of bulletins supplementary to the *Labour Gazette*. Report No. 1 of this series was issued in March, 1921. The records upon which the statistics are based begin in most cases with the year 1901. Index numbers have been calculated, with the year 1913 as base, to show the general movement of wage rates; the series covers six groups of occupations back to 1901, and common factory labour, miscellaneous factory trades, and lumbering back to 1911. Average index numbers, weighted according to the average numbers of employees in each group as shown in the Censuses of 1921 and 1931, are also given. Weighting has not been applied within the groups. In groups by occupations or industries such as these, weighting makes comparatively little difference as rates of wages for the various classes of labour tend to rise and fall to the same extent even in different localities. In the three groups of common factory labour, miscellaneous factory trades, and logging and sawmilling, the index numbers being calculated from samples, the averages are automatically weighted by the numbers of samples, which vary according to the numbers of workers in the various occupations and industries. The upward movement that appeared in the index numbers for some groups in 1934 became general in 1935 and continued in 1936, 1937, 1938, and to a slight extent in 1939. On steam railways wages were increased in 1937 and in 1938, the 1929 rates being restored gradually.

\* A detailed study on the subject of wages and hours of labour in Canada is obtainable from the Department of Labour, Ottawa. See pp. 774-783 of the 1927-28 Year Book for an article on the "Wages Statistics of the Census of 1921" and pp. 797-799 of the 1933 Year Book for "Earnings in the Census Year 1931".

<sup>1</sup> Weighted according to average numbers of workers in each group in 1921 and 1931.  
since the publication of the 1939 Year Book.<sup>2</sup> Revised

In editions of the Year Book prior to 1933, a table of wages and hours of common labour in factories for certain cities is given in this section. The information for 1939 will be found at p. 70 of *Wages and Hours of Labour in Canada*, published as a supplement to the *Labour Gazette* for March, 1940. For the five cities of Table 27 the information is now included under heading 5 of the stub. This valuable detailed study is obtainable from the Department of Labour, Ottawa.

¹ Maximum rates based on length of service; Halifax rate for one-man cars; 5 cents extra for one-man car operators in Montreal, Toronto, and Winnipeg; Vancouver 6 cents extra.

**Wages of Farm Labour.**—Rates of pay for farm labour reached their highest point in 1920. In the next two years farm wages dropped considerably, while from 1923 to 1929 there was little change. With the downward trend of prices of farm produce due to the depression, farm wages also showed marked reductions that continued from 1930 to 1933. Since 1934 there have been small increases in each year, but the average rates for both males and females are still far below the rates paid in the year 1930.

The figures in Table 28 include only those persons employed as wage-earners on farms. All female wage-earners on farms are included, even though they may be employed in a purely domestic capacity.

**28.—Average Wages and Board of Farm Help in Canada, as Estimated by Crop Correspondents, 1914, 1920, 1930, and 1938-39, and by Provinces, 1938-39.**

NOTE.—M = Males. F = Females. Average wages per month in the summer months for a two-year period, and average wages per year for a five-year period are shown in the February issue of the "Monthly Bulletin of Agricultural Statistics".

**Subsection 2.—Earnings in the Census Year 1931.\***

The total number of wage-earners in Canada reporting earnings for the census year ended June 1, 1931, was 2,476,414 or 96.35 p.c. of all wage-earners and the total amount of their earnings was \$2,100,552,700. A table at p. 789 of the 1937 Year Book shows statistics of wage-earners, by sex, and their earnings, for the census years 1911, 1921, and 1931.

\* This information is compiled by the Dominion Bureau of Statistics.

## Section 9.—The Regulation of Minimum Wage Rates in Canada.

The regulation of minimum wages is under provincial jurisdiction. All of the provinces except Prince Edward Island have legislation in effect providing for the establishment of minimum wage rates for female employees in certain industries and occupations through boards authorized to establish and enforce these minimum rates. Such legislation was enacted between 1918 and 1920 in all of these provinces except New Brunswick. In Nova Scotia the legislation is applicable to female workers only, but in the other provinces it now applies both to male and female workers. There is also legislation for the restriction of hours of labour which are regulated in some of the provinces by the minimum wage boards but in the others only under the factory Acts, etc. So far as such legislation has been enacted it is covered in the sections on labour legislation occurring in this and earlier editions of the Year Book (see Index).

In British Columbia since 1925, and in Manitoba since 1931, separate orders have been effective for some classes of male workers and their scope was much extended in 1934 and subsequent years. In New Brunswick, the Labour and Industrial Relations Act, 1937, which reproduces the provisions of the Fair Wage Act, 1936, provides for the establishment of minimum wage rates but no orders of general application had been issued by the end of 1939. In Saskatchewan since 1936, and in Quebec since 1937, all minimum wage orders for females apply also to male workers. In Alberta, separate orders for male workers were issued in 1937 for the first time. In Ontario, under the Minimum Wage Act, 1937, the legislation was extended to male workers but only one order for males had been made effective by the end of 1939, namely, that relating to the textile industry. In Quebec and New Brunswick, wages in logging are regulated under forestry regulation acts.

In Quebec, since 1934, certain wage rates established through collective agreements have been made binding on industries in certain districts or throughout the Province, under the Collective Labour Agreements Extension Act, 1934, and later under the Workmen's Wages Act, 1937, and the Collective Labour Agreements Act, 1938. The Industrial Standards Acts of Ontario and Alberta in 1935, that of Nova Scotia in 1936, and of Saskatchewan in 1937 provided for joint conferences of employers and employees for the establishment of wage scales in various industries in the districts concerned.

Information as to minimum wage rates for work under Dominion Government contracts for the manufacture and supply of equipment, stores, clothing, etc., appears in the paragraphs on Fair Wages in the section on the Dominion Department of Labour at pp. 744-745.

### Subsection 1.—Minimum Wages for Females.

The table on pp. 790-791 gives information as to minimum rates of wages and as to hours for which these rates are payable under the orders of the various provincial boards and commissions in effect at the end of 1939.

The information here given is intended to afford merely a statistical summary of the minimum wages with hours of labour in the provinces and industries affected, and, while some of the more significant details have been given in footnotes, it has

been found impossible to include the information in such form as to indicate any more than the general provisions.

For complete information it is necessary to refer to the orders of the various provincial boards. These have been given in some detail in the *Labour Gazette* from time to time as issued, and in summary form, by provinces, in the *Wages and Hours Supplement to the Labour Gazette*, March, 1940. In some provinces these orders include regulations as to employment conditions, sanitary conditions, etc. The boards have power to issue licences permitting lower rates of pay to handicapped workers and to meet special conditions in the nature of emergencies.

In Table 29, pp. 790-791, figures for adult learners and for minors and apprentices are shown in a range covering both classes. There is wide variation in the rates for such classes in the several industries and the time allowed for such periods varies in most cases from one year to 18 months. Probationary periods (usually 3 months) without pay are allowed in some cases—beauty parlours, millinery, dressmaking in shops, etc.

### Subsection 2.—Minimum Wages for Male Employees.

Provisions for minimum wage rates for male employees are outlined in the *Wages and Hours Supplement to the Labour Gazette*, March, 1940, a summary of which follows:—

In Prince Edward Island, the City of Charlottetown, as authorized by an amendment to its incorporating Act, has established by by-law a minimum wage rate of 35 cents per hour for labourers and workmen engaged by contractors.

In New Brunswick, the Labour and Industrial Relations Act, 1938, which incorporates the Fair Wage Act, 1936, provides for the establishment of minimum and overtime rates of wages and maximum hours for both male and female workers. Orders have been issued for a number of individual establishments but none of general application in any trade or industry. Under the Forest Operations Act, 1934, the Commission, from Apr. 1, 1939, established for stream-driving a minimum average rate of \$2.50 per day and board, net, or its equivalent in case of piece work. For booming and sorting a minimum rate of 25 cents an hour without board was set. After Oct. 1, 1939, for cutting, yarding, and hauling, a minimum rate for each employee of \$36 and a minimum average rate of \$40 per month and board, net, were fixed.

In Quebec, the Fair Wage Act, 1937, replacing the Women's Minimum Wage Act, applies to both male and female workers (see Table 29, pp. 790-791). Under the Act to Assure Reasonable Wages for Workmen Engaged in Forest Operations, 1937, a minimum of \$45 per month with board is established. An Order in Council under the Act, approved Sept. 13, 1939, provides that for youths of 18 to 20 years, handicapped persons, and men of 60 years or over, the minimum is \$30 per month of 26 days, with board; regular hours are limited to 60 per week, with time and a quarter for overtime. No one under 18 years of age may be employed, and not more than 12½ p.c. of employees are to be paid less than the regular minimum of \$45.

In Ontario, until repealed in 1937, the Minimum Wage Act had provided that wherever a male employee replaces a female employee in any class of industry, the male employee must be paid at least the minimum rate established. This Act was replaced by the Minimum Wage Act, 1937, applying to both male and female workers. By the end of 1939 only one order, which covers the textile industry, had been issued under the new Act and the old orders were still in effect.

<sup>1</sup> Rates apply to cities and incorporated towns.<sup>2</sup> Rates vary according to zones, the highest rates being in Zone I—Montreal and District; all rates apply to males as well as females.<sup>3</sup> Rates vary according to locality and population.<sup>4</sup> Rates apply in all cities throughout the Province to male and female workers.<sup>5</sup> Only in cities and in the Towns of Melville and Estevan and within a radius of 5 miles; rates apply to males as well as females.<sup>6</sup> Orders apply throughout the Province except telephone exchange order which applies only in centres with 100 lines or more.<sup>7</sup> Rates apply throughout the Province. Provision made for fishing industry (except canning), as follows: experienced—\$15.50 per week (48 hours) or 32 7/24 cents per hour; minors, learners, etc.—\$12.75 to \$14.75 per week.<sup>8</sup> Rates for experienced, minors, learners, etc. are not specified but for most industries three rates are given. The highest rate, used here as the experienced rate, must usually be paid to 60 p.c. of the workers. Special orders have fixed hourly rates by occupation for certain industries; some of these orders apply only to Montreal, Quebec, Lévis, and Hull.<sup>9</sup> Custom millinery trades not in factories: minors, learners, etc.—\$5 to \$10.<sup>10</sup> Fifty hours per week for tailoring, dressmaking, and millinery establishments.<sup>11</sup> Factory order includes garages, automobile service stations, fuel and lumber yards, etc.<sup>12</sup> Millinery shops, \$4 to \$10 for learners.

## Orders of Provincial Minimum Wage Boards, as at Dec. 31, 1939.

Wages and Hours of Labour, Report No. 23, issued as a supplement to the *Labour Gazette*, March, 1940.

<sup>13</sup> No minimum wage.<sup>14</sup> In Montreal district—19 to 26 cents per hour, 54-hour week; Quebec City—15 to 27 cents per hour, 54-hour week.<sup>15</sup> Quebec City—15 to 30 cents per hour, 60-hour week, except Dec. 5-31 (72 hours).<sup>16</sup> Department stores and mail-order houses: experienced, \$12; minors, learners, etc., \$8 to \$11.<sup>17</sup> Applies also to wholesale and mail-order houses.<sup>18</sup> Rate of \$12 applies to Winnipeg and district and Brandon at any time; to Portage la Prairie, May to October; and to any summer resort, June to September.<sup>19</sup> In Towns of Estevan and Melville: experienced, \$10; learners \$6 to \$10 per week of 48 to 60 hours.<sup>20</sup> Restaurants only—any place where meals are provided.<sup>21</sup> Applies also to elevator operators; there is a separate order for janitresses in apartment houses.<sup>22</sup> Or 25 to 30 cents per hour.<sup>23</sup> Cleaners 35 cents per hour; no minors to be employed.<sup>24</sup> Applies also to attendants at garages and automobile service stations, drivers of motor-cars and other vehicles.<sup>25</sup> Taxicab offices, Montreal—17 and 25 cents per hour, 66-hour week.<sup>26</sup> Applies also to elevator operators, including learners (under separate order).<sup>27</sup> Winnipeg, St. Boniface, St. James, and Brandon.<sup>28</sup> Applies only to offices of industries named in the factories order.<sup>29</sup> Applies also to physicians', dentists', and optometrists' offices, post, and telegraph offices.<sup>30</sup> Applies also to telegraph employees.

In Manitoba, the Minimum Wage Act provides that, when a minimum wage scale has been established for any industry, no person of the age of 18 years or over may be paid less than 25 cents per hour except where the Board has passed specific regulations providing for a different rate. As all industries except farming, market gardening, and domestic service are now under regulation, the above minimum rate of 25 cents per hour for male persons of 18 years of age or over applies to all except where special regulations have been made, as follows: In manufacturing, departmental stores and mail-order houses, retail and wholesale stores, and general employees the orders apply to male as well as female employees (see Table 29, pp. 790-791). For hotels, restaurants, etc., the minimum for male workers over 18 is \$12 per week of 48 hours at any time in Greater Winnipeg and Brandon and during summer months in Portage la Prairie and summer resorts. The minimum is \$10 per week of 48 hours in other places. All orders apply to boys under 18 in cities, except that special orders for boys under 18 in cities provide for minimum rates of \$8 to \$10 in manufacturing establishments, hotels, garages, etc. The Taxicab Act establishes for Greater Winnipeg a minimum of \$17.50 per week or 40 cents per hour with a minimum of \$1.60 per day, hours not to exceed 12 per day, 6 days per week. The Highway Traffic Act sets minimum rates for drivers of public passenger vehicles at \$80 per month or \$20 per week, 9 hours per day for driving, 12 hours in any capacity, 6 days per week. The Fair Wage Act provides for minimum wages and maximum hours on public works under contract, and also on private construction work as defined in the Act, under schedules approved by the Minister of Public Works.

In Saskatchewan, minimum wage rates for female employees in shops and factories now extend to male employees and to all of the Province by amendment in 1936 to the Minimum Wage Act, 1919. (See Table 29, pp. 790-791). The Coal Mining Industry Act, 1935, and an amendment to the Public Services Vehicles Act in 1935 provide for the establishment of minimum wage rates but none had been set by the end of 1939.

In Alberta, under the Male Minimum Wage Act, 1936, a general order covers all workers except those engaged in farm work and domestic service, those working under schedules set by the Industrial Standards Act or under codes drawn up under the Department of Trade and Industry Act, and casual, seasonal, or temporary workers for employers not engaged in the industry, and a few others. The general order establishes a minimum of 25 to 33½ cents per hour for full-time employees over 19 years and 20 cents for full-time employees under 17 years. Corresponding minimum rates for part-time employees are from 30 to 40 cents for those over 17 and 25 cents for those under 17. A special order for employees of sawmills, box factories, woodworking, logging, and tie-cutting in rural districts provides a minimum rate of \$30 per month with board and lodging. Another special order sets the following minimum rates for retail delivery boys if employed by the week or longer period, under 16 years—\$7.50; over 16 and under 18—\$9.50 per week; 17 to 22½ cents per hour according to age, if employed by the day or hour.

In British Columbia, under the Male Minimum Wage Act, 1934, applying to all occupations except farm labourers and domestic servants, orders have been issued in relation to: logging, sawmilling, furniture and woodworking industries; baking; fruit and vegetable canning, packing, etc.; construction; carpenters in some localities; shipbuilding; truck, bus, and taxi drivers; mercantile industry; stationary engineers; barbers; elevator operators; first-aid attendants; janitors; and the Christmas-

tree industry. Generally speaking, the minimum rates for unskilled labour are: 40 cents per hour for males over 21 years of age, 25 to 35 cents for those between 18 and 21, and 20 to 25 cents per hour for those under 18. In addition, the Female Minimum Wage Act, 1934, provides that, where a minimum wage rate has been set for female workers in any industry, male workers may not be employed at work usually done by female employees at less than the fixed minimum wage.

### **Subsection 3.—Wages and Hours of Labour under Collective Agreements and Schedules of Wages and Hours Made Obligatory by Order in Council in Certain Provinces.**

In Nova Scotia, under the Industrial Standards Act, 1936, minimum wage rates and standard hours have been fixed in Halifax and Dartmouth for bricklayers, carpenters, electrical workers, plumbers and steamfitters, and plasterers.

In New Brunswick, the Industrial Standards Act, 1939, is in effect, but no schedules had been approved by the end of 1939.

In Quebec, under the Collective Labour Agreements Act, 1938 (which replaced the Workmen's Wages Act, 1937, and the Collective Labour Agreements Extension Act, 1934), wages and hours in agreements between representatives of employers and of workers have been extended and made compulsory for all employers in the trade or industry in the district affected, and were in effect at the end of 1939, as follows: For the whole Province, in certain manufacturing industries, viz., boots and shoes; gloves (all operations on fine gloves, cutters only on work gloves); men's and boys' clothing (except work clothing); children's clothing; men's and boys' hats and caps; women's coats and suits; lithographing; furniture; can, container, and metal utensils; paper boxes; granite, marble, and stone quarrying; also for the paint manufacturing industry from February, 1940: in most of the cities and towns and in some villages for the building trades, and the barbering and hairdressing trades: in three districts, which include all cities of over 11,000 population, for job-printing trades, and in two of these districts for newspaper work as well: for iron oxide mining and aluminium smelting in the districts in which these industries are carried on: in the four largest cities and in Granby for bakeries: in Quebec, Montreal, and Sherbrooke for garages and service stations: in the Montreal and Quebec districts for the fur industry: in Montreal and district for women's and children's millinery; textile and jute bag industry; the passenger, freight, and industrial car and bus manufacturing industry; and for funeral undertakers: in Quebec, Montreal, and Sorel for longshoremen: in Quebec for dairy employees and tavern employees: in eight cities and towns for clerks and accountants: in six Eastern Township counties for horseshoers and wheelwrights: in Sherbrooke for shoe repairing: in Jonquière and Kenogami, for the sash and door industry.

In Ontario, under the Industrial Standards Act, 1935, wages and hours schedules have been made binding by Order in Council and were effective at the end of 1939, for the following industries: throughout the Province for breweries, furniture (wood) factories, men's and boys' clothing factories, and women's cloak and suit factories; in two districts for the logging industry; in Ottawa, for bakers; in Toronto for the soft furniture industry, jewellery manufacturing, coal hoisting, coal handling and driving, and taxi driving; in Toronto, Hamilton, Ottawa, Kingston, Cornwall, Peterborough, Brantford, Galt, Kitchener, St. Thomas, Kirkland Lake, Windsor, Sault Ste. Marie, and Timmins for one or more of the building trades; and in most of the cities and larger towns for barbers.

In Manitoba, Part II of the Fair Wage Act, added in 1938, is similar to the Industrial Standards Acts in other provinces, but no schedules had been approved by the end of 1939.

In Saskatchewan, under the Industrial Standards Act, 1937, schedules were in effect by Order in Council at the end of 1939, as follows: one building trade in Moose Jaw, one in Saskatoon, and five building trades in Regina; barbers in twelve districts and hairdressers in five districts; draying, transferring and storage, and shoe repairing at Regina; bakers at Moose Jaw; sign painters at Regina and Moose Jaw; and watch repairing at Saskatoon.

In Alberta, under the Industrial Standards Act, 1935, schedules have been put into effect by Order in Council and were effective at the end of 1939, as follows: in Calgary, Edmonton, and the adjacent districts, for bakers; two building trades at Calgary and seven at Edmonton and their surrounding districts, and one trade at Red Deer and Sylvan Lake; taxi drivers at Calgary, Banff, and Edmonton; garages and service stations at Calgary; bowling alley employees at Edmonton and Calgary; the honey-producing industry in the Coaldale, Taber, Vauxhall, and Lethbridge zones; the lumbering industry, including logging, sawmills, planing mills, and box factories, in three zones. Under the Department of Trade and Industry Act, 1934, a code setting forth minimum wages for barbers throughout the Province was in effect at the end of 1939.

### Section 10.—Proceedings under the Combines Investigation Act.

A general article on Canadian legislation concerning combinations and monopolies in restraint of trade appears in the 1927-28 Year Book under the heading "Legislation Respecting Combinations in Restraint of Trade", pp. 765-770. In each later issue of the Year Book an annual statement on proceedings under the Combines Investigation Act is included.

The first Dominion legislation in this field was "An Act for the Prevention and Suppression of Combinations Formed in Restraint of Trade", passed in 1889 and now in force in amended form as Sect. 498 of the Criminal Code. Legislation providing special facilities for the investigation of combines was first enacted in 1907 and was included in the Customs Tariff of 1907. In 1910 the Combines Investigation Act of that year was enacted. The latter Act was replaced by the Combines and Fair Prices Act, 1919, which, in turn, after declaration of its constitutional invalidity by the Judicial Committee of the Privy Council, was replaced by the present Combines Investigation Act in 1923 (R.S.C. 1927, c. 26).

**The Combines Investigation Act.**—This Act provides means for the investigation of trade combinations, mergers, trusts, and monopolies alleged to have operated in restraint of trade and to the detriment of the public. The Act was amended in 1935 and 1937. In 1931 its constitutional validity was upheld by the Judicial Committee of the Privy Council, following a reference of questions on this point by the Governor in Council to the Supreme Court of Canada. The Combines Investigation Act provides for publication of reports of investigations of alleged combines. Participation, or knowing assistance, in the formation or operation of combinations or monopolies that are detrimental to the public and come within the scope of the Act, is an indictable offence. Provision also is made in the Act for the reduction or removal of customs duties, at the instance of the Governor in Council, in cases where

it is found that, with respect to any commodity, there exists any combine to promote unduly the advantage of manufacturers or dealers at the expense of the public, and that such disadvantage to the public is facilitated by existing customs duties.

**Investigations in 1939.**—A report on an investigation into the operations of alleged combines in the manufacture and sale of paperboard shipping containers and related products was made by the Commissioner on Mar. 14, 1939. A combine embracing all principal manufacturers in Canada was found to exist in the shipping-container industry. The Commissioner also found that several manufacturers of paperboard used in such containers were parties to a secondary and related combine. Court proceedings were begun at the instance of the Attorney General of Canada and true bills on two indictments were found by a grand jury in Toronto in September, 1939. One trade association officer and 23 corporations were charged with offences against Sect. 498 of the Criminal Code. Trial under this indictment was expected to proceed early in 1940.

Proceedings against the alleged combine of tobacco manufacturers and wholesalers, investigated under the Combines Investigation Act in 1938, were instituted by the Attorney General of Alberta in November, 1938, when informations were laid charging 44 individuals and companies with offences under Sect. 498 of the Criminal Code. After preliminary hearing of the Crown's evidence in April and May, 1939, the accused were remanded for trial, which was later adjourned to a date early in 1940.

A combine of certain wholesalers and shippers of fruits and vegetables in Western Canada was declared to exist in a report made by the Commissioner on Oct. 31, 1939. The report and evidence were remitted to the Attorney General of British Columbia, at whose instance informations were laid on Dec. 19 charging 4 individuals and 8 companies as parties to this alleged combine and charging the same accused and 2 others as parties to a conspiracy contrary to common law in relation to secret rebates. At the conclusion of the preliminary hearings before a magistrate at Kelowna, B.C., on Feb. 8, 1940, the accused were committed for trial on the combine charges; the conspiracy charges were dismissed.

Investigations made during 1939, in addition to those reviewed above, covered a wide variety of products and various types of trade practices. Complaints alleging the existence of injurious restraints of trade have been carefully investigated when it appeared possible that the public might be affected detrimentally by operations of an alleged monopoly or combination. Modifications of proposed or existing trade programs along lines designed to safeguard public interest have followed certain of these preliminary inquiries.

## Section 11.—The Co-operative Movement in Canada.\*

The Co-operative Union of Canada was formed in 1909, with six affiliated societies and 1,595 members. In 1938, 62 societies reported to the Union, their membership being 178,832. The sales of the reporting societies totalled \$14,013,232 and the purchase dividends returned to their members amounted to \$608,600. The classes of co-operative activities covered included retailing, wholesale trading, marketing, dairying, transportation societies, and buying clubs.

\* An article on "The Co-operative Movement in Canada", by Miss Margaret Mackintosh, M.A., of the Department of Labour, Ottawa, appears at pp. 704-720 of the 1925 edition of the Year Book.

Since October, 1909, the Union has published a monthly, *The Canadian Co-operator*, from which these statistics and those in Subsection 1 have been taken.

### Subsection 1.—Consumers' Co-operation.

The statistics in Table 30, which cover only those retail societies reporting to the Co-operative Union of Canada, cannot be considered as strictly comparable owing to the fact that, should a large society fail to report in any one year (and this has frequently happened in the past), an apparent decrease in the activities of the societies, not in line with actual conditions, would result.

The following notes, covering membership only, will help the reader to judge the real trend of consumers' co-operative activity. The increase of 624 in 1932 was due, in part, to the failure of 2 existing societies to report in 1931, although 3 new societies reported a membership of 583. Of the total increase of 1,354 in 1933, 1,058 was due to the reporting, for the first time, of 4 societies that had been in existence from 2 to 5 years, while one new society reported 57 members. In 1934, the apparent increase of 418 is modified by the fact that it includes 210 members of a society not reported in 1933, while one new society, with 44 members, reported in 1934. In 1935 the situation was complicated, since 6 societies that reported in the previous year failed to do so in 1935, their 1934 membership having totalled 736—on the other hand, 2 previously existing societies, which did not report in 1934, reported 177 members and 3 new societies reported 525 members; as these two factors almost balance, it would appear that the existing societies increased their membership by nearly 600. In 1936, three new societies reported a membership of 461, while those established societies that reported in both 1935 and 1936 showed an increase in membership of 1,022; in addition, six buying clubs in Quebec and Ontario reported a membership of 739. In 1937, the 38 societies that also reported in 1936 showed an increase in membership of 1,839; five societies that did not report in 1936 had a membership of 1,467, and of these, 3 were new organizations with 474 members. Three societies, with 638 members, reported in 1936 but not in 1937.

Of the 47 societies reporting in 1938, 38 reported in 1937. There were 8 new organizations reporting a membership of 1,713 and 1 old association, which did not report in 1937, had a membership of 252 in 1938. Five societies that reported a total membership of 2,277 in 1937 did not report in 1938.

**30.—Statistics of Retail Co-operative Societies Affiliated with the Co-operative Union of Canada, 1931-38.**

### Subsection 2.—Co-operative Credit in Quebec.

A form of co-operation that provides short-term credit for small-scale farmers and industrial workers in the Province of Quebec has achieved great success. In 1900, what are known as "Les Caisses Populaires", or People's Banks, were begun with the establishment, by the late Alphonse Desjardins, of La Caisse Populaire at Lévis. M. Desjardins adopted the following principles: lending money only for approved purposes to carefully selected members in a restricted area; limited liability; issuing shares of small amount payable by instalments and withdrawable; and distribution of profits. These banks are for the most part established in agricultural districts. Loans are made to purchase agricultural implements at cash prices, to increase farm live stock, to improve farm buildings, to tide over a period of depression, to pay off a merchant, and for various similar purposes. The loans, though comprised within the term 'short credit', are for longer periods than are usual in ordinary commercial transactions because agricultural operations necessarily extend over longer periods than those of trade. They may be for 12, 15, or even 24 months, because they must give time for the farmer to realize on his products.

Details of organization may be found in the Statistical Year Book of Quebec. Complete information on the working of each individual bank, including such details as number of members and depositors, rates of interest paid, loans made and profits realized, classification of size of loans, receipts and expenses, and a résumé of chief operations from the date of organization to 1938, for those banks operating in the latter year, are published in the report entitled "Co-operative People's Banks and Co-operative Agricultural Societies".

#### 31.—Progress of Co-operative People's Banks in Quebec, 1915, 1920, 1925, and 1930-38.

### Subsection 3.—Agricultural Co-operation in Canada.\*

Canadian farmers have been accustomed to the idea of mutual assistance since the days of early settlement as evidenced by barn raisings, beef rings, threshing syndicates, and the exchange of labour for various types of farm work. Isolated groups have been in business for some time but in the past thirty years the number of such organizations has increased rapidly. Available statistics for 1938 show 1,332 active farmers' business organizations with a total turnover of \$201,659,984.

\* Prepared in the Division of Economics, Marketing Service, Department of Agriculture.

These associations have been brought into being in order to obtain better price terms through increased bargaining power, to provide some service not at present available, or to improve some existing service considered inadequate.

In Canada the expansion of co-operative activity has taken place most rapidly and to the greatest degree in the marketing field. Collective action has made possible the pooling of the proceeds received from the sale of agricultural products of the same grade and quality and the return to the farmers of an average price for such products. This has frequently implied better grading and preparation for market while the products are still under the control of the producers than would otherwise have been the case. The value of farm products marketed amounted to \$180,747,471 for the crop year ended July 31, 1939.

Many associations formed primarily for marketing have found it possible to render additional service to their members by utilizing the existing organizations for the purpose of purchasing supplies needed on the farm. A number of associations have been formed primarily for the purpose of buying supplies, usually bulk commodities, and some are operating stores carrying a full line of general merchandise. Over half of the associations of this type operate in the Prairie Provinces and the principal commodities handled are gasoline, tractor fuel and other petroleum products, coal and wood, and binder twine. Sales of supplies and merchandise amounted to \$20,400,008 for the crop year 1938-39 or about 11 p.c. of the value of farm products marketed.

In order to increase effectiveness, sales agencies have been formed on a regional basis or on a Dominion-wide commodity basis, as the Canadian Co-operative Wool Growers, Limited, and the Canadian National Silver Fox Breeders' Association. Wholesale societies are also operating in most of the provinces, consolidating the buying power of the local associations and augmenting the benefits to be obtained from quantity buying. The United Farmers of Ontario, Limited, and the Coopérative Fédérée de Québec combine the functions of sales agency and wholesale buying agency for their affiliated local associations.

Fruits, vegetables, grain, seed, eggs, poultry, wool, and furs are usually graded and otherwise prepared for market before being offered for sale. Elevators, stock-yards, common and cold-storage warehouses, and chick hatcheries are owned and operated co-operatively. Butter and cheese are manufactured, chicken and apple products are canned, commercial feeds and spray materials are prepared in co-operative plants. The First Co-operative Packers of Ontario, Limited, process hogs into bacon and other pork products. The Consumers' Refineries Co-operative Association, Limited, Regina, refine crude oil into gasoline, distillate, and other petroleum products.

In 1908 the Nova Scotia Legislature passed the Farmers' Fruit Produce and Warehouse Associations Act and in the same year the Quebec Legislature enacted the Co-operative Agricultural Associations Act. Since that time each province has provided for the incorporation of co-operative associations by suitable legislation. Since 1932, five provinces have enacted new co-operative associations Acts and in three provinces there have been extensive amendments or consolidations. Such legislation varies between provinces but in most cases interest on capital is limited and profits are required to be distributed to members on the basis of

patronage. There is no Dominion co-operative Act but several farmers' organizations have been incorporated under the Dominion Companies Act. Others have been incorporated by special Acts of the Dominion Parliament and provincial legislatures. Over 90 p.c. of the associations reporting are incorporated by one or other of these means but many have not achieved such status and are buying or shipping through clubs or circles.

The Provincial Governments have set up machinery to assist co-operative activity mainly in connection with marketing. The Agricultural Economics Branch was established within the Dominion Department of Agriculture in 1929 and one phase of its work has been the study of the farmers' co-operative movement. Under joint agreements with the Provincial Governments, a survey of existing organizations was undertaken in 1931 and has been maintained annually since that date.

The number of associations reporting to the Economics Division has shown an increase in each of the eight years since the survey was inaugurated. The annual volume of business increased from 1932-33 to a high point during the 1939 crop season. The total business transacted by farmers' co-operatives amounted to \$201,659,984, an increase of \$46,579,549 over the previous year. In 1938 the volume and quality of the grain crop in Western Canada showed considerable improvement over that of the 1937 season. The price per bushel showed a decline but, owing to increased volume, the estimated total value of the grain crop marketed co-operatively increased by \$31,000,000. The business of the Flue-Cured Tobacco Marketing Association of Ontario has been included in the summary for the first time this year. This is a co-operative bargaining association controlled by growers whose representatives annually negotiate a price with the tobacco manufacturers. After making allowance for the inclusion of the business of this association, amounting to \$16,000,000, and the increase in value of the grain marketed, the record indicates a slight gain in general business by other co-operatives in 1938-39 compared with the preceding year.

In addition to the trading associations described above and for which statistics are given in Table 32, farmers are interested in other forms of co-operative activity.

A mutual fire insurance company was formed in Ontario as early as 1836 and several, still functioning as farmers' mutuals, were organized between 1850 and 1860. To-day there are about 350 such companies with net assets of over \$5,000,000 and insurance at risk amounting to over \$1,000,000,000. These have a long history of successful operation behind them.

Approximately 69,000 or 5 p.c. of the telephones in Canada are operated by rural co-operative companies in which there is a total investment of \$19,414,380.

Inspired by the example of Quebec, six other provinces have passed co-operative credit union legislation within recent years, and societies have been formed for the purpose of making credit available to members.

Societies have been formed by fishermen on both coasts for the purpose of canning and marketing fish and buying gear on the co-operative plan. As many of the members of these societies are also farmers, mention may well be made of this activity in a summary of agricultural co-operation. During 1938, 17 fishermen's co-operative societies in Nova Scotia with a membership of 800 did business amounting to \$271,610 and had on hand, at the end of the year, assets amounting to \$92,075.

## 32.—Farmers' Co-operative Business Organizations in Canada, Crop Year Ended July 31, 1939.

NOTE.—Co-operative insurance companies, credit societies, telephone co-operatives, and farmers' institutes are not included in this Table.

## Section 12.—Old Age Pensions and Pensions for Blind Persons.\*

**The Old Age Pensions Act, 1927.**—Legislation respecting Old Age Pensions (R.S.C., 1927, c. 156) was adopted by the Dominion Parliament in 1927. Under the provisions of this statute the Dominion Government reimbursed each province participating in the Dominion scheme to the extent of one-half of the provincial expenditure for old age pensions. An amendment passed at the 1931 session of Parliament (c. 42, Statutes of 1931) provided that the Dominion contribution to the provinces be increased from 50 p.c. to 75 p.c. of the provincial disbursements for old age pensions. The Dominion contribution of 75 p.c. of provincial disbursements was made effective from Nov. 1, 1931; the provinces have since been reimbursed on this basis.

The Dominion Old Age Pensions Act is now operative in all provinces and in the Northwest Territories.

The Gold Commissioner of Yukon was given authority, by a Yukon Territorial Council Ordinance passed in 1927, to enter into an agreement with the Dominion Government for the purpose of obtaining the benefits of the Old Age Pensions Act for residents in the Territory. No proposed scheme of administration for adoption in Yukon has been submitted for the approval of the Governor in Council.

Sect. 5 of the Act provides that, before any agreement is made with a province, the scheme for the administration of pensions proposed to be adopted by the province shall be approved by the Governor in Council, and that no change in such scheme shall be made without the consent of the Governor in Council.

The qualifications required of an applicant for pension are set forth in Sect. 8 of the Act which reads as follows:—

- (1) Provision shall be made for the payment of a pension to every person who, at the date of the proposed commencement of the pension:—
  - (a) is a British subject, or, being a widow, who is not a British subject, was such before her marriage;
  - (b) has attained the age of seventy years;
  - (c) has resided in Canada for the twenty years immediately preceding the date aforesaid;
  - (d) has resided in the Province in which the application for pension is made for the five years immediately preceding the said date;
  - (e) is not an Indian as defined by the Indian Act;
  - (f) is not in receipt of an income of as much as three hundred and sixty-five dollars (\$365) a year; and
  - (g) has not made any voluntary assignment or transfer of property for the purpose of qualifying for a pension.
- (2) The receipt of a pension shall not by itself constitute a disqualification from voting at any provincial or municipal election.

Sect. 9 provides that the maximum pension payable shall be \$240 yearly, subject to reduction by the amount of the income of the pensioner in excess of \$125 a year. The pension authority may accept a transfer of the pensioner's interest in a dwelling house in which he resides, in which case the value of the dwelling is not considered in calculating the amount of pension payable. Subject to certain conditions, the pension authority is entitled to recover out of the estate of any deceased pensioner the amount of pension payments with interest at 5 p.c. per annum, compounded annually.

By Sect. 15 provision is made for the suspension of pension where a pensioner has transferred his residence to some place out of Canada. It is provided by

\* Revised under the direction of Dr. W. C. Clark, Deputy Minister, Department of Finance, Ottawa.

Sect. 16 that a pension shall not be subject to alienation or transfer by the pensioner or to seizure in satisfaction of any claim against him.

The Governor in Council is empowered by Sect. 19 of the Act to make regulations pursuant to this section. Existing regulations were revised and approved by Orders in Council dated Dec. 9, 1937, Feb. 3, 1938, and July 27, 1939.

<sup>1</sup> Estimates of population on which these figures are based are given at p. 103.

**Pensions for Blind Persons.**—By an amendment to the Old Age Pensions Act in 1937, provision was made for the payment of a pension to every blind person who, at the date of the proposed commencement of pension:—

- (a) is, and continues to be so blind as to be unable to perform any work for which eye-sight is essential;
- (b) has attained the age of forty years;
- (c) is not in receipt of a pension in respect of blindness under the Pension Act, or an allowance in respect of blindness under the War Veterans' Allowance Act;
- (d) is:—
  - (i) unmarried, or a widower without a child or children, or a widow without a child or children, and is not in receipt of an income of as much as four hundred and forty dollars a year, or—
  - (ii) married, or a widower with a child or children, or a widow with a child or children and is not in receipt of an income of as much as six hundred and forty dollars a year; and—
- (e) fulfils the conditions laid down in paragraphs (a), (c), (d), (e), and (g) of Subsection 1 of Section 8 of the Act.

The maximum pension payable to a blind person is \$240 yearly except in the case of a blind person, who, after the coming into force of the amendment to the Act, marries a person so blind as to be unable to perform any work for which eyesight is essential. The maximum pension in such a case is \$120 yearly.

The amended Act provides that pensions payable to blind persons shall be subject to reduction as follows:—

- (a) in the case of an unmarried person or a widower without a child or children or a widow without a child or children, by the amount of the income of the pensioner in excess of two hundred dollars a year;
- (b) in the case of a married person or a widower with a child or children or a widow with a child or children, by the amount of the income of the pensioner in excess of four hundred dollars a year;
- (c) in the case of a person married to a blind person receiving a pension under the amended Act, by the amount of the income of the pensioner in excess of two hundred dollars a year.

No blind person who is married, or is a widower with a child or children, or a widow with a child or children, is entitled to any pension in excess of the pension to which an unmarried person is entitled unless such married person and his or her spouse, or such widower or widow and one or more of his or her children, are living together.

The Governor in Council is empowered to make regulations with regard to pensions for blind persons and to define the expression "is so blind as to be unable to perform any work for which eyesight is essential".

#### Section 13.—Mothers' Allowances.\*

Seven of the nine provinces of Canada provide for the payment of allowances to mothers who are widowed or without adequate means of support. The Province of Manitoba was the first to make such provision in 1916, and the example has been

\* This information was obtained through the courtesy of the respective provincial authorities.

followed by the other western provinces and by Ontario, Nova Scotia, and Quebec. The Mothers' Allowances Act, 1930, of New Brunswick has not been proclaimed in effect.

All the mothers' allowances Acts stipulate that, at the time of making application, the mother must be a resident of the province and a widow. In British Columbia the recipient must have resided in the Province for a period of at least three years.

In all provinces but New Brunswick and Nova Scotia, a wife whose husband is mentally incapacitated is eligible. In each case the applicant must also be a resident of the province at the time at which death, incapacity, or desertion occurs. Under all the laws, except those of New Brunswick, Nova Scotia, and Quebec, the wife of a physically disabled man is eligible but the section in the Alberta Act relating specifically to such persons has not been proclaimed. In British Columbia allowances are paid in cases where total disability is expected to continue for one year or more, and allowances are paid on behalf of the disabled man.

In Alberta, British Columbia, Ontario, and Saskatchewan 'deserted'\* wives are paid an allowance, and in British Columbia and Saskatchewan the wives of inmates of penal institutions are eligible. British Columbia also grants allowances to divorcees or those legally separated. Under all the statutes except those of Alberta and Saskatchewan, the mother must be a British subject, or the widow or wife of a British subject. In Nova Scotia the recipient herself must be a British subject. Allowances may be paid to foster-mothers under certain conditions in all the provinces but Alberta, Nova Scotia, and New Brunswick.

In New Brunswick, Nova Scotia, and Quebec, allowances are payable in respect of two or more dependent children. In addition, New Brunswick pays an allowance for one child under 16 if there is an invalid child over 16 years of age, while the same is true of Nova Scotia, if the mother is unable to maintain herself and the child. In the other provinces, allowances are payable in respect of one or more dependent children, but in Manitoba, under the regulations, no allowance is payable in respect of an only child, unless the mother is temporarily or permanently unable to care for the child. In British Columbia, New Brunswick, Nova Scotia, Ontario, Quebec, and Saskatchewan a dependent child is a child under 16 years of age. In Alberta, a boy under 15 or a girl under 16 is deemed to be dependent. In Manitoba, only children under 15 are regarded as dependent but exceptions are made in the cases of invalids.

In Alberta the cost of the allowances is divided between the Province and the municipalities concerned, and in the other provinces the whole cost is carried by the province.

**Rates of Allowances.**—In British Columbia, the Act provides for a maximum monthly allowance of \$42·50 for a mother with one dependent child, an additional \$7·50 for each child under 16 years of age, and a further \$7·50 in cases where the husband of the mother is totally disabled and is living with her. Since 1933 the amount allowed for a mother and one dependent child has been reduced to \$35, although the Act has not been changed. In New Brunswick and Nova Scotia, a maximum allowance of \$60 per month is fixed by statute. In the other provinces, the provincial authority administering the Act has power to fix the rate of the allowance. In Ontario, the maximum for a mother and one child is \$35 per month in a city, \$30 in a town of over 5,000 population, and \$25 in a rural district, with an

\* In Ontario presumption of death after complete disappearance of the husband for 3 years is interpreted as desertion. In Saskatchewan death may be presumed after 7 years, while in Alberta and British Columbia pensions may be paid after desertion for 5 and 2 years, respectively.

allowance of \$5 for each additional child. In Saskatchewan, under the terms of an Order in Council of January, 1936, maximum monthly payments range from \$8 to a mother with one child to \$44 to a mother with ten or more children.

In Manitoba, the maximum allowance for a mother and two children is \$50 excluding allowance for winter fuel, with a maximum of \$89 for a family of seven or more children. In Alberta, the allowance is determined by the special circumstances in each case, the maximum payment ranging from \$25 per month to a mother with one child to \$50 per month where there are five children.

An allowance of \$40 monthly for a woman with two dependent children is paid in Quebec, with \$5 for each additional child, the total not to exceed \$60.

**Nova Scotia.**—The Mothers' Allowances Act (c. 4, 1930) was passed at the session of 1930 and came into force on Oct. 1, 1930.

**Quebec.**—The Needy Mothers' Assistance Act, 1937, became operative in December, 1938. The total amount paid out in allowances from Dec. 31, 1938, to Jan. 31, 1940, was \$2,263,219. The number of beneficiaries at Jan. 31, 1940, was 4,728. Of this number, 4,449 were widows, 251 were mothers whose husbands were interned in lunatic asylums, and 28 were grandmothers.

**Ontario.**—The Mothers' Allowances Act (R.S.O., 1927, c. 280) was originally passed at the session of 1920, as c. 89 of the Statutes of that year, and came into force on Oct. 1, 1920.

**British Columbia.**—The Mother's Allowances Act (R.S.B.C., 1937, c. 53) was originally passed as c. 61 of the Acts of 1920, and came into force in July, 1920.

Under the original Act, the full cost of allowances was borne by the Province. In 1932 one-half of the costs of allowances paid to residents of a municipality was charged to the municipality to which they belonged, but at the end of the fiscal year 1936-37 responsibility for all payments was again assumed by the Province.

In 1939 there were 469 cases where mothers received extra allowances for incapacitated husbands.

# CHAPTER XX.—PRICES.\*

## CONSPECTUS.

	PAGE.		PAGE.
SECTION 1. WHOLESALE PRICES OF COM-MODITIES .....	809	Subsection 1. The Bureau of Statistics Index Numbers of Retail Prices and Services.....	817
Subsection 1. Historical Review of Canadian Prices.....	809	Subsection 2. The Nutrition and Family Living Expenditures Investigation...	819
Subsection 2. The Index Number on the 1926 Base.....	810	SECTION 3. INDEX NUMBERS OF SECURITY PRICES.....	822
SECTION 2. RETAIL PRICES AND COST OF LIVING.....	817	SECTION 4. INDEX NUMBERS OF BOND YIELDS.....	824

For purposes of statistical analysis, commodity prices are usually divided into two principal groups, wholesale prices and retail prices. The term 'wholesale' is not used literally, and primary producers', factory, and jobbers' quotations, as well as actual wholesale prices, are often included in this group. Markets in which this type of price is quoted are usually well organized, and frequently very sensitive. They are responsive to changing business and monetary conditions. Wholesale quotations are preferred, therefore, for sensitive index numbers of prices designed to reflect price reactions to economic factors.

Retail prices represent more diffused markets, and are less sensitive. There is ordinarily a lag of several months between this type of quotation and its wholesale counterpart. Retail prices are important from a statistical point of view, however, because they indicate changes in living costs and, along with measurements of income, show fluctuations in the economic well-being of the community.

\* Except as otherwise credited, the sections of this chapter have been revised under the direction of Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics. This Branch compiles and publishes statistics on: Prices (wholesale, retail, securities, bond yields, services, exchange, cost of living), Retail and Wholesale Trade, Foreign Capital Investments in Canada and Canadian Investments Abroad, Balance of International Payments, and other related subjects. For a complete list of the publications of this Branch, see Chapter XXIX, Section I, under "Internal Trade".

## Section 1.—Wholesale Prices of Commodities.

### Subsection 1.—Historical Review of Canadian Prices.

From Table 1 will be noted the high prices of 1867, following the close of the American Civil War and the Austro-Prussian War of 1866, and the tendency to declining prices in subsequent years. Prices rose again after the Franco-German War of 1871 and reached a high point in 1872 and 1873, but the crisis of the latter year resulted in a decline. A downward trend persisted fairly steadily throughout the 25 years from 1872 to 1897, when the gold supply of the world did not increase as rapidly as the supply of commodities. This gold shortage was accentuated by the demonetization of silver, which was reduced to the level of token money by most nations. Relief came through the discoveries of gold in the Rand mines and the application of the cyanide process to low-grade ores. The result was a rapidly increasing world production of gold from about 1890 to the outbreak of the War of 1914-18, with consequent rising prices as the volume of the new gold became an appreciable part of the total stock. The War itself, both through the scarcity of commodities that it occasioned and the inflation of the currency, drove prices rapidly upward to a maximum of 243·5 in 1920, followed by a rapid drop to 152·0 in 1922. The tendency from 1922 to 1929 was gradually downward, although the period was one of increasing prosperity.

Commencing in the autumn of 1929, a severe economic depression was accompanied by a drastic decline in wholesale prices (the wholesale price index fell from 153·7 in August, 1929, to 99·2 in February, 1933). A subsequent irregular rise followed until 1937, although the trend of prices was downward in the latter half of that year. This movement persisted until September, 1939, when the outbreak of war in Europe accounted for a sharp rise in the last four months of the year.

### Subsection 2.—The Index Number on the 1926 Base.

There was a net advance during 1939 of 11·5 p.c. in the general index while component groups showed the following percentage increases: vegetable products 19·2, animal products 11·5, textiles 23·3, wood products 11·7, iron and its products 4·0, non-ferrous metals 5·3, non-metallic minerals 0·2, and chemicals 9·5. Net price increases for the year for individual commodities were, with few exceptions, less than 25 p.c. Increases exceeding this amount, however, were recorded for raw silk, wool, grains, rubber, leather, groundwood pulp, and tin.

### 2.—Monthly Weighted Index Numbers of General Wholesale Prices, 1929-39.

(1926=100.)

**Canadian Farm Products Prices.**—Movements in the Canadian farm products index of wholesale prices were somewhat narrower during 1939 than for commodity wholesale prices in general. This was due in part to the use of minimum prices established by the Canadian Wheat Board when market prices of wheat were below the Board's minimum levels. The composite index for Canadian farm products advanced from 64·8 in January to 65·5 in April and then receded to 58·4 in August. The subsequent rise in prices did not cancel summer declines until December, when the index reached 69·1. Throughout 1939 the animal products section held at levels substantially higher than those of the field product section. Annual averages for these two groups were 81·4 and 54·3, respectively, in 1939.

**Industrial Materials Prices.**—The Dominion Bureau of Statistics inaugurated in 1938 a new series of index numbers, consisting of 30 basic industrial materials. It is computed from an unweighted geometric average with 1926 prices equal to 100. The 30 commodities are divided into 2 main groups of 18 sensitive manufacturing materials and 12 stable price series. The 18 sensitive commodities are, in turn, separated into 2 sub-groups of 13 sensitive manufacturing materials and 5 food products.

The major trends outlined by the index of industrial materials prices since 1926 can be summarized briefly as follows: from 1926 to 1929 underlying instability was apparent and the general index moved lower at a gradual pace throughout the period. Then followed a severe decline, which depressed industrial materials prices along with other principal commodity groups until the beginning of 1933 although temporary improvement occurred during the summer months of 1932; markets weakened, however, towards the close of the year and the index dropped further. A gradual rise punctuated by intermittent short-period declines ensued. In March, 1937, industrial materials prices attained their highest point since 1929 and a slightly lower peak was shown in July, after a minor reaction. From this period to November, 1938, the index of industrial materials prices receded to levels on a par with those of 1936 and the latter part of 1935. The effects of the outbreak of war are noticeable in the last four months of 1939.

### 3.—Monthly Price Index Numbers of Industrial Materials Prices, 1926-39.

**Wholesale Price Index Numbers of Principal Exports and Imports.—**

Wholesale prices of principal import and export products were affected in almost equal degree by advances between August and December, 1939. The import index mounted from 80.6 to 93.8, while the export series moved up from 59.9 to 71.5. The relative price margin of imports over exports was greater, however, in 1939 than for any other year since 1913. It was most pronounced in the price groups for vegetable products, iron, and non-ferrous metals, but for all component material groups 1939 import wholesale price indexes were above corresponding export series.

**8.—Index Numbers of Wholesale Prices of Exports and Imports, Classified According to Chief Component Material, 1929-39.**

(1926=100.)

Note.—Statistics for 1913-28 are given at p. 830 of the 1938 Year Book.

## Section 2.—Retail Prices and Cost of Living.

Collection of data and calculation of index numbers of retail prices and the cost of living are carried out in co-operation by the Dominion Bureau of Statistics and the Department of Labour. Resultant series of index numbers are computed from different points of view. Index numbers of retail prices and cost of living, issued by the Bureau, have for their object the measurement of the general movement of such prices and costs in the Dominion as a whole, and are so calculated as to make comparisons possible with other general index numbers constructed on similar principles, for example, the index of wholesale prices. Calculated, as they are, on the aggregative principle, i.e., the total consumption of each commodity, the Bureau's index numbers afford an excellent measurement of changes in the average cost of living in the Dominion as distinguished from that of any particular class or section. As a development of retail prices and cost of living studies, investigations into the living expenditures of families in representative cities (see Subsection 2, p. 819) have been made by the Bureau of Statistics. The results of these are available in bulletin form.

The computations of the Labour Department are designed to show changes in the cost of living for workmen's families in cities. They are thus limited in scope and more restricted in application than the Bureau of Statistics index.

### Subsection 1.—The Bureau of Statistics Index Numbers of Retail Prices and Services.

In the Bureau's index, 1926 is taken as the base year. A description of the system of weighting of individual items, sub-groups, and groups, and of the method of construction of this index number is given at pp. 812-818 of the 1931 Year Book. Annual figures on the 1913 base covering prices of a family budget of staple foods, fuel, rent, etc., will be found in the Bureau's report "Prices and Price Indexes", while monthly figures are published in the *Labour Gazette*.

As in the case of wholesale prices, retail commodity prices showed little movement during 1939 until the closing months of the year; the food index showed an appreciable advance only in the last four months. During the same period fuels moved higher by slightly more than the usual seasonal increase for the autumn and early winter season. Special surveys of prices of clothing and household furnishings showed that there were moderate advances in November and December and at the end of the year the prices of these two items were, respectively, 3.6 p.c. and 8.4 p.c. above the levels of Sept. 1. Changes in residential rentals during 1939 were generally small. An index of rentals based on a survey in May was 90.0, and the corresponding October, 1939, index was 89.9. The 1938 average index for rentals was 89.8.

### 9.—Index Numbers of Retail Prices, Rents, and Costs of Services, 1929-39, and by Months, 1938, 1939, and January-April, 1940.

(1926=100.)

NOTE.—Statistics for 1913-28 are given at p. 820 of the 1938 Year Book. Monthly figures prior to 1938 will be found in the corresponding table of previous editions of the Year Book.

Year.	Food Index.	Fuel Index.	Rent Index.	Clothing Index.	Sundries Index.	Total Index.

<sup>1</sup> Subject to revision.

**Prices of Services.**—Services are a very considerable item in the cost of living of the average family, and special studies are made annually by the Bureau of Statistics covering the most important services that affect the family budget. Information with regard to street-car fares, rates for manufactured and natural fuel gas for domestic consumption (which is mostly a service charge), and domestic electric light and telephone charges, is published at pp. 801-804 of the 1927-28 Year Book. Detailed information for intervening years regarding such services will be found at pp. 72-83 of the annual report on "Prices and Price Indexes, 1913-38", issued by the Dominion Bureau of Statistics.

Prices of manufactured fuel gas, after showing a downward tendency between 1926 and 1936, reversed direction and recorded a moderate rise, the Dominion index number for 1937 being 94.5, as compared with 93.6 in 1936. A slight decline occurred again in 1938. The index number of the price of natural fuel gas declined from 100.0 in 1926 to 92.5 in 1930, rose again to 94.3 in 1932, then declined to 92.3 in 1936, 1937, and 1938. On the other hand, telephone rates have shown a distinct increase, the Dominion index number of domestic telephone rates having risen from 100.0 in 1926 to 107.4 for 1933-38. Again, the business telephone rate has risen from 100.0 in 1926 to 119.4 in 1938.

**Hospital Charges.**—Special investigations into hospital charges are made annually by the Dominion Bureau of Statistics and the results are given as Dominion averages

in the following table. Hospital charges in 1930 were 94 p.c. above the 1913 level. From 1930 to 1935 rates gradually declined to less than 88 p.c. above those in 1913, then rose slightly from 1936 to 1938. Operating room charges have not increased at the same rate as room charges, being approximately 56 p.c. above those in 1913, while the latter averaged more than 90 p.c. higher. The cost of maintaining patients in hospitals declined more than 11 p.c. between 1930 and 1934, then gradually rose by more than 5 p.c. during the next four years.

The detailed results of this investigation, including the statistics by provinces, are given at pp. 73-77 of the annual report on "Prices and Price Indexes, 1913-38".

#### Subsection 2.—The Nutrition and Family Living Expenditures Investigation.\*

An interdepartmental committee was organized in 1937 to examine possibilities of meeting the need for definite information in respect to nutrition and family living expenditures, especially in urban centres. On this committee were representatives from the Bureau of Statistics, the Department of Pensions and National Health, the Department of Labour, the Department of Agriculture, and the National Research Council. Following recommendations by this committee, Parliament made a vote to the Bureau of Statistics for the purpose of proceeding with a survey in 1938.

At June 15, 1939, the Bureau of Statistics had completed a survey of family living expenditures in the 12 cities of Charlottetown, Saint John, Halifax, Quebec, Montreal, Ottawa, Toronto, London, Winnipeg, Saskatoon, Edmonton, and Vancouver. The statistics cover the 12 months ended Sept. 30, 1938. The sample families were selected at random from among those with certain characteristics that make them typical of Canadian wage-earner homes. Each home consisted of both parents and one or more children, and in some cases one lodger or a domestic also lived with the family. Earnings in the samples ranged from \$450 to \$2,500 per annum and all families were completely self-supporting throughout the survey year. It was found that family incomes tended to centre between \$1,200 and \$1,600—the

\* Revised by H. F. Greenway, M.A., Prices Statistician and Officer in Charge of the Nutrition and Family Living Expenditures Investigation, Dominion Bureau of Statistics.

proportion receiving less than \$1,200 being larger than the proportion receiving more than \$1,600. Of the 1,439 families from which records were received, 1,135 were families of British origin, 211 were French families in Montreal and Quebec, and 93 were families of other racial origins in Montreal and Winnipeg.

In addition to the main information as to family expenditures, certain other questions were asked, the replies to which throw light upon some family characteristics at progressive income levels. These are summarized in a statement at p. 863 of the 1939 Year Book.

**Summary of Results.**—Results show that remarkable similarity prevails in the proportions of income spent upon the more essential budget items in different areas of the Dominion. On the average, about two-thirds of the total expended each year goes for necessities. The value of food purchases tends to be higher in the larger cities. The proportion of expenditures devoted to the provision of shelter ranged from 15.1 p.c. in Charlottetown to 20.9 in Ottawa; fuel and light expenditures range from 4.5 p.c. in Quebec City to 7.7 p.c. in Charlottetown; and clothing expenditures from 9.6 p.c. in Vancouver to 12.5 p.c. for Montreal families other than British and French.

Many factors affect expenditures for living needs. The amount of family income is generally considered the dominant influence, but income in turn is related to the age of the principal breadwinner, and the numbers and ages of children also affect the character of family living expenditure. In these studies that the Bureau is making, living expenditure records are shown grouped according to three principles of classification with a view to examining the relationships between living expenditures and the factors in family composition, viz., number of children in the family, age of the father, and principal types of families.

From the data gathered there appeared to be no general tendency in urban wage-earner families of British origin for the number of children to increase in the higher family-income groups, although in French families the average number of children was larger at higher income levels.

In both racial origin groups, amounts spent per person declined as the number of children in the family increased. Average expenditure per person dropped from \$516 in British families with one child to \$212 in households with five children. Corresponding averages from French families were \$397 and \$219. All budget groups contributed to this decline, with food outlay per person falling from \$127 to \$74 for British families and from \$109 to \$75 for French families with one and with five or more children, respectively.

A different picture was obtained when expenditure records were classified according to the age of the father. The number of children per family tended to increase until the father's age was somewhere between 45 and 54, and amounts spent per person on food and clothing increased slightly as the age of the father moved upward into that range. This was associated with a more rapid rise in income than in numbers of children at progressive age levels of the father.

Analyses of records for living expenditure tendencies related to numbers of children and the length of time the family had been formed, did not reveal the existence of a 'typical' family. Families with one child under 13 years, or with two children from 4 to 12 years apparently possess some claim to this title but, contrary to popular opinion, families with three children form a definite minority. The

tendency, already noted, for income to increase as the family life span lengthened was apparent in family groups with the same number of children. The earnings of older children were partly responsible for this increase. For families with the same number of children, expenditures on food and clothing mounted as the family life span extended but not by the full amount of the income increase. Housing and household furnishing expenditures actually declined as the number of children increased. Apparently a wide diversity in consumer tastes exists, which is scattered fairly evenly among 'non-necessity' expenditures, such as recreation, transportation, and savings.

### 11.—Average Distribution of Family Expenditures, by Income Groups.

NOTE.—The total average amounts of expenditure shown are in some cases greater than the maximum of the salary group, because savings from annual income have been treated as items of expenditure, and considerable credit is utilized by wage-earner families. Purchases made from previous savings and by trade-in allowances also enter into the picture.

### Section 3.—Index Numbers of Security Prices.

Security prices have long been utilized in statistical measurements related to economic phenomena. They are generally sensitive to changing business conditions, although this valuable characteristic is sometimes overshadowed by the fact that their movements may be influenced greatly by speculative interest very remotely associated with underlying economic conditions. Thus in 1928 and 1929, common stock prices advanced far beyond levels indicated by business profits and prospects.

The behaviour of Canadian common stock prices has been quite different from that of commodity prices since 1914. During the War of 1914-18 there was no advance in security markets paralleling the pronounced inflation in commodity values. Between 1926 and 1929, however, when commodity prices were declining gradually, common stocks more than doubled in price. Both sets of prices recorded a sharp drop between 1929 and 1933, and both have shown recovery subsequently. However, this recovery has been much more pronounced in the case of security prices.

**Investors Index Numbers of Common Stocks.**—The outbreak of hostilities at the beginning of September found Canadian common stock prices at or near low points for 1939. From the year's opening level of 107·5, the Bureau's daily index for 95 industrial and utility common stocks declined about 16·3 p.c. to 90·0 on Aug. 24. Recessions were common to almost all sections of the market during this period. After the declaration of war on Sept. 3, the industrial and utility share price average mounted within four days to approximately 17 p.c. above the year's low. A decline, almost as sharp, cut more than 80 p.c. off this advance within the ensuing two weeks. A sizable rally developed from that point which moved this index back to 108·7 by the final week of October. The closing weeks of the year again found quotations moving lower, though this reaction was in marked contrast to the substantial improvement in Canadian industrial activity in the final quarter. Closing at 101·2, the composite index of industrials, utilities, and banks showed a net loss of 6·9 p.c. from the corresponding level of a year earlier. Industrial stocks, paced by a 19·6 p.c. decline in the industrial mines sub-group index, dropped 9·8 p.c. during the year to 165·4. An index for 19 utilities, on the other hand, moved 3·2 p.c. higher to 45·6. Bank stocks were 0·7 p.c. higher, the index at the end of the year being 84·4.

**Preferred Stocks.**—An index of 25 Canadian preferred stock prices dropped from 85.0 in January, 1939, to 78.9 in April. Subsequent recovery was hesitant until September, when preferred issues, like common stocks, reacted sharply to war-time conditions. The December index of 91.3 showed a net rise of 5 p.c. for the year, in contrast to a decline of nearly 7 p.c. for common stocks.

**Weighted Index Numbers of Mining Stocks.**—Prices of mining issues in 1939, while following the major price fluctuations of industrials and utilities, showed some noteworthy differences. Chief among these was the slump in an index for 22 golds, which fell to a 1939 low of 92.8 on Sept. 11. Prices strengthened moderately from this point partly as a result of a 10 p.c. premium on United States funds, thus raising the United States official gold price of \$35.00 per ounce to \$38.50 in Canadian funds. On a daily basis the final 1938 index of 123.6, compared with the 1939 closing level of 107.6, showed a percentage loss of 12.9. An index of 3 base metal stocks touched a yearly peak of 338.5 on Sept. 5 but within the space of two weeks had fallen to a 1939 low of 270.0. This sharp decline followed the

announcement that British Control Boards were to be set up to establish prices considerably below the current levels for various non-ferrous metals. The year's closing index of 303.2 was down 4.8 p.c. from that of 1938. There was a decline of 9.8 p.c. to 145.6 in the Bureau's composite index for 25 mining issues between Dec. 31, 1938, and Dec. 31, 1939.

### Section 4.—Index Numbers of Bond Yields.

The exceptional requirements of the war years of 1914-18 turned the Dominion authorities to the internal market, a field that had hitherto served mainly the needs of the provinces and municipalities. Historical records of long-term bond yields in the internal market for years before 1914 are obtainable, therefore, only from provincial and municipal sources. Ontario issues from 1900 to date are available in this field, and were utilized for the first long-term bond yield index constructed by the Bureau of Statistics. The relatively long period for which these records have been preserved makes this series of considerable value. At pp. 805 and 806 of the 1937 Year Book a statement will be found bearing on the movements of Ontario bond yields since 1900.\* Since the War of 1914-18, however, the growing importance of Dominion financing in the domestic market has made it advisable to supplement the Ontario series with the Dominion index of long-term bond yields shown in Table 15. The data have been revised, as indicated in the headnote, in order to simplify the construction of these series and to lengthen the average maturity of issues included. Comparison of the new indexes with those published for the years 1932 to 1939 at p. 870 of the 1939 Year Book will show a very close correspondence. However, the new yield index, while showing the same fluctuations as the old, has tended to remain at slightly higher levels in recent years.

\* This index of Ontario long-term bond yields may be found in the Bureau's monthly bulletin "Prices and Price Indexes", obtainable from the Dominion Statistician.

Revised indexes have been based upon simple arithmetic averages of market prices and computed yields for two representative long-term Dominion issues. At the beginning of 1932, the two issues upon which the indexes were based were Dominion of Canada 4½ p.c. 1948-58, which was used until December, 1936, and Dominion of Canada 4½ p.c. 1949-59, used until December, 1937. The first of these was replaced by Dominion of Canada 3 p.c. 1950-55, which was used from December, 1936, to December, 1938. The two issues now forming the base for the index are Dominion of Canada 3½ p.c. 1956-66, in use since December 1937, and Dominion of Canada 3 p.c. 1953-58, in use since December, 1938.

**Bond Prices.**—Long-term bond prices ended the year approximately 5.3 p.c. lower, the index falling from 118.8 for the final week of 1938 to 112.5 for the week ended Dec. 28, 1939. The year-end index indicated that bonds had recovered approximately one-half of severe September price declines when the index touched a five-year low of 108.7.

# CHAPTER XXI.—PUBLIC FINANCE.

Subsection 5. National Debt.....	853	Subsection 3. British and Foreign Capital Invested in Canada and Canadian Capital Invested Abroad.....	879
SECTION 2. PROVINCIAL PUBLIC FINANCE.	864		
Subsection 1. Provincial Revenues and Expenditures.....	865		

The great increase in Dominion expenditure since 1913 has been due partly to the War of 1914-18 with the resulting burden of interest, pension charges, etc., and partly to railway expenditures and social services including, latterly, unemployment relief. Increases on a commensurate scale have also taken place during the same period in provincial and municipal expenditures. Thus, in their fiscal years ended 1937, the total ordinary expenditure of the nine Provincial Governments was \$253,443,737 as compared with \$53,826,219 in 1916, only 21 years before—an increase of over 371 p.c. (The aggregate interest payments of Provincial Governments rose from \$7,817,844 in 1916 to \$67,222,797 in 1937.) Again, in recent years, between 1924 and 1937, the aggregate tax receipts of the municipalities of Ontario have increased from \$94,526,271 to \$120,502,561 (comparable figures are not available for earlier years)—an increase of about 27 p.c. In Quebec the ordinary receipts of municipalities increased from \$33,288,115 in 1915 to \$79,471,242 in 1933—an increase of 139 p.c.; later figures given in Table 34 are not comparable.

**Combined Statistics of All Governments.**—In Appendix VI is a combined balance sheet for all Governments as Table 1, and a combined revenue and expenditure current accounts statement of all Governments as adjusted for comparative purposes. The statement below is summarized from the statistics given in the respective sections of this chapter, the guaranteed or indirect debt being shown separately.

### SUMMARY OF THE AGGREGATE PUBLIC DEBT OF CANADA *CIRCA* 1938. (Dominion, Provincial, and Municipal Debt.)

NET DIRECT DEBT—	\$	\$
Net Debt of Dominion Government, Mar. 31, 1938.....	3,101,667,570	
Net Direct Liabilities Provincial Governments, 1938 (sinking funds and available capital, current and trust account assets deducted).....	1,260,256,621	
Direct Liabilities all Canadian Municipalities, 1937 (less sinking funds and investments).....	1,465,486,818	
TOTAL NET DIRECT DEBT.....		5,827,411,009
GUARANTEED OR INDIRECT DEBT—		
Dominion Government, Mar. 31, 1938—		
Principal and interest guaranteed on railway and other securities.....	\$ 834,400,643	
Interest only guaranteed on railway securities.....	216,207,142	
Other guarantees.....	213,259,230 <sup>1</sup>	
Provincial Governments—individual fiscal years, 1938.....	1,263,867,015	275,728,633
TOTAL GUARANTEED OR INDIRECT DEBT.....		1,539,595,648
GRAND AGGREGATE PUBLIC NET DIRECT DEBT AND GUARANTEED OR INDIRECT DEBT OF CANADA.....		7,367,006,657

<sup>1</sup> Includes bank advances \$8,162,834, British Columbia and Manitoba Treasury Bills \$5,505,297, deposits of chartered banks in Bank of Canada \$194,859,595; bank loans under Saskatchewan Seed Loan Guarantees Act, 1936, \$2,555,113; and the Home Improvement Loans Guarantee Act \$2,176,391. There is also an unstated amount guaranteed for the Winnipeg Grain and Produce Clearing Association, Limited, for day-to-day margins of the Canadian Wheat Board. Bank loans guaranteed under the Seed Grain Loans Guarantee Act, 1937, have been authorized up to \$8,950,000 and an indeterminate amount has been guaranteed under the Dominion Housing Act, 1935.

## PUBLIC DEBT OF CANADA

\* The figures of Bonded Debt and Treasury Bills shown here are the only figures of Provincial Debt comparable over the period shown.

**APPORTIONMENT OF AGGREGATE PUBLIC DEBT  
DIRECT AND INDIRECT OF CANADA**

1938

NOTE.—Dominion indirect debt (railways) includes that of Canadian National Steamships and Harbours Commission.

## Section 1.—Dominion Public Finance.\*

**Historical Sketch.**—Both under the French *régime* and in the earlier part of the British, the territorial or casual revenues of Canada, consisting of certain seigniorial dues and the proceeds of the sale of government timber and land, were reserved to the Crown, while the right of levying taxes and of regulating the trade and commerce of the colony was, after 1763, deemed to be vested in the British Parliament.

By the Quebec Act of 1774, certain duties on spirits and molasses were imposed, to be expended by the Crown in order to provide a revenue "towards defraying the expenses of the administration of justice and the support of the civil government of the province". A little later, in 1778, the British Government, by the Declaratory Act (18 Geo. III, c. 12), renounced forever the right of taxing the colonies to provide Imperial revenue, but maintained its claim to impose duties considered necessary for the regulation of trade, the proceeds to go towards defraying the expenditures of the colonial administration. After the Constitutional Act of 1791, the customs duties remained under the control of the Imperial Government, their revenue, as well as the territorial revenue above mentioned, coming in to the Executive Administration independently of the Legislative Assembly and thus making the Executive power largely independent of the Legislature. In case these revenues proved insufficient, recourse could generally be had to the grant made by the Imperial Government for the support of the army. As time went on, however, the Crown revenues became more and more inadequate to meet the increasing expenditure, while the wave of economy in the United Kingdom after 1815 made it impossible any longer to supplement these revenues from military sources. On the other hand, the purely provincial revenues collected under the authorization of the Provincial Legislature showed an increasing surplus. The power of the purse thus began to pass into the hands of the Legislatures; further, in 1831 the British Parliament passed an Act placing the customs duties at the disposal of the Legislatures.

Under the Act of Union, a consolidated revenue fund was established. All appropriation bills were required to originate in the Legislative Assembly, which was forbidden to pass any vote, resolution, or bill involving the expenditure of public money unless each had been first recommended by a written message of the Governor General. The British Government surrendered all control of the hereditary or casual revenues, which were thenceforth paid into the treasury of the Province to be disposed of as its Legislature should direct.

At the interprovincial conference that took place prior to Confederation, it was decided that the new Dominion Government, which was to take over permanently, as its chief source of revenue, the customs and excise duties that had yielded the greater part of the revenues of the separate provinces (direct taxation being as unpopular in British North America as in other new countries), was also to assume the provincial debts and to provide out of Dominion revenues definite cash subsidies

\* Revised under the direction of Dr. W. C. Clark, Deputy Minister, Department of Finance, with the exception of those parts dealing with war tax revenue and income tax revenue at pp. 845-849, which were revised by the Department of National Revenue.

for the support of the Provincial Governments. (See Tables 21 and 22.) Until the War of 1914-18, which made other taxes necessary, the customs and excise duties constituted the chief resource of Dominion Government revenue for general purposes—the Post Office revenue and the Government railway receipts, which are not taxes at all, being mainly or entirely absorbed by the expenses of administering these services. Indeed, for many years preceding the War, customs and excise duties, together with the revenue from the head tax on Chinese immigrants, were the only items of receipts that were classified as taxes by the Department of Finance. In the pre-war fiscal year 1914 these two items aggregated \$126,143,275 out of total receipts on consolidated fund account amounting to \$163,174,395, the Post Office and Government railways furnishing between them \$26,348,847 of the remainder, offset, however, by expenditures on these two services amounting to \$27,757,196. Miscellaneous revenue, largely fees, amounted in that year to \$10,682,273—a comparatively small fraction of the total. As both customs and excise taxes were indirect, the average Canadian felt but little the pressure of taxation for Dominion purposes.

The War of 1914-18 enormously increased the expenditure, and this increase had, in the main, to be met by loans. It is, however, a cardinal maxim of public finance that, where loans are contracted, sufficient new taxation should be imposed to meet the interest charge upon the loans and to provide a sinking fund for their ultimate liquidation. This War taxation was begun in Canada within the first weeks of the War when, in the short War session of August, 1914, increases were made in the customs and excise duties on various commodities, including coffee, sugar, spirituous liquors, and tobacco. In 1915 special additional duties of 5 p.c. *ad valorem* were imposed on commodities imported under the British preferential tariff and 7½ p.c. *ad valorem* on commodities imported under the intermediate and general tariffs, certain commodities being excepted. New internal taxes were also imposed on bank circulation, on the income of trust and loan companies, on insurance in other than life and marine companies, on telegrams and cablegrams, railway tickets, sleeping-car berths, etc., also on cheques, postal notes, money orders, letters, and post cards. In the following year, the business profits war tax (dropped in 1921)\* was introduced, and in 1917 an income tax was imposed. In 1918 both of these taxes were increased and their application widened, and in 1919 the income tax was again increased, and still further augmented in 1920 by a surtax of 5 p.c. of the tax on incomes of \$5,000 and over; the sales tax was also introduced in 1920. The cumulative result of these War taxes was that, in the fiscal year ended Mar. 31, 1921, customs duties were, for the first time, displaced from their position as the chief factor in Canadian revenue, the War taxes yielding \$168,385,327, as against the customs yield of \$163,266,804. This situation has remained true down to 1939 with the exception of the period between 1928 and 1931, when customs duties temporarily assumed their former position.

---

\* Belated revenue from this tax has been collected in subsequent fiscal years down to 1933 (see Table 9, p. 845).

The importance that the sales tax has attained as a source of revenue will be seen from Table 16. When first introduced in 1920 the tax was 1 p.c. on sales but the rate has been varied from year to year and from May 2, 1936, has been 8 p.c. A statement appears at p. 836 of the 1938 Year Book showing the changes made from the inception of the tax up to 1938. A lesser, but still substantial, source of revenue is the special excise tax on importations, instituted in 1931, the changes in rates of which are shown in a second statement.\*

**Recent Modifications in the System of Taxation.**—A detailed sketch of the changes made in taxation from 1914 to 1926 will be found at pp. 755-759 of the 1926 Year Book, while similar information *re* tax changes in 1927 to 1929 is given at pp. 791-792 of the 1930 Year Book, for the years 1930 to 1935 at pp. 824-826 of the 1936 Year Book, for 1936-37 at pp. 837-839 of the 1938 Year Book, and for 1938 at pp. 874-875 of the 1939 edition.

The Minister of Finance in his Budget Speech of Apr. 25, 1939, outlined the financial position of Canada. Among the tax changes credit was allowed against income tax equal to 10 p.c. of the capital expenditures made by any individual, firm, partnership, or corporation in the year preceding Apr. 30, 1940. Provision was also made for extension to Jan. 1, 1943, of the period of eligibility for the three-year exemption from income tax granted to new metalliferous mines. In order to implement the undertaking made in the United States-United Kingdom Trade Agreement, the Budget exempted all but goods entering the country under the General Tariff from the special excise tax of 3 p.c. on imports. Minor changes were made in the Customs Tariff and the Income War Tax Act, while under the Excise Act the tax on spirits used in making vinegar was increased from 27 cents per gallon to 60 cents per gallon.

*The Special War Budget.*—On Sept. 12, 1939, at a special session of Parliament called following the outbreak of war in Europe, the Acting Minister of Finance presented a comprehensive program of tax changes intended to provide revenues to meet the additional expenditures arising out of Canada's participation in the war. The most important feature of this program was the Excess Profits Tax Act, which provides for a tax on excess profits, to be calculated on either of two bases at the option of the taxpayer. One option embodies a graduated tax on profits when calculated as a percentage of capital employed in the undertaking, while the other option embodies a tax of 50 p.c. on the increase in profits over the average profits for the four years 1936, 1937, 1938, and 1939, or the four fiscal periods of the taxpayer ending therein. It is provided that, in either case, the ordinary income tax paid may be deducted as an expense before calculating the excess profits tax.

Under the Income War Tax Act the ordinary rate of tax on corporations was increased from 15 p.c. to 18 p.c., while the rate on corporations making a consolidated return was increased from 17 p.c. to 20 p.c. A war surtax equal to 20 p.c. of the tax payable by individuals under existing income tax rates was levied. Allowance of contributions to patriotic organizations as a deduction up to 50 p.c. of net taxable income was also provided.

Under the Excise Act the duty on spirits was increased from \$4 to \$7 per proof gallon; the duty on Canadian brandy was increased from \$3 to \$6 per proof gallon;

\* Pursuant to changes made in the 1939 Budget, this tax now applies only to importations under the General Tariff, and hence in the future will be of small importance as a source of revenue.

the duty on malt was increased from 6 cents to 10 cents per pound; the duty on manufactured tobacco, with the exception of cigarettes, was increased from 20 cents to 25 cents per pound; the duty on cigarettes weighing not more than three pounds per thousand was increased from \$4 per thousand to \$5 per thousand. Other changes affecting malt liquor and malt syrup were also made.

Under the Customs Tariff, increases were made in the duty on imported beers, liquors, wines, and tobaccos to correspond with the increases made in the tax on these products when manufactured domestically. In addition, there was imposed an increase in the duty on coffee of 10 cents per pound, and of 5 cents per pound on tea valued less than 35 cents per pound,  $7\frac{1}{2}$  cents per pound on tea valued 35 cents or more but less than 45 cents per pound, and 10 cents per pound on tea valued 45 cents or more per pound.

Although no increase was made in the rate of sales tax, important items were removed from the exempt list, including canned fish, salted or smoked meats, and electricity and gas when used in a dwelling place. Carbonic acid gas and similar preparations used for aerating non-alcoholic beverages were taxed at the rate of 2 cents per pound under the Special War Revenue Act, while the tax on wines of all kinds, except sparkling wines containing not more than 40 p.c. proof spirit, was increased to 15 cents per gallon; the tax on champagne and all other sparkling wines was increased to \$1.50 per gallon.

A statement at pp. 811-817 of the 1937 Year Book shows complete details of the Dominion tax system as of July, 1936, and statements at pp. 836-837 of the 1938 edition show changes made in the sales tax and in the special excise tax on importations since the inception of these taxes in 1920 and 1931, respectively.

### Subsection 1.—The Current Balance Sheet of the Dominion.

The details of the various assets and liabilities are contained in the schedules accompanying the balance sheet and printed in the *Public Accounts*.

It should be noted that under the heading "Non-Active Assets", p. 832, the revision of the capital structure of the Canadian National Railways in 1938 resulted in the elimination of all loans made in previous years to the Canadian National Railways to cover deficits and the setting up of the new accounts shown for 1938 and 1939. These latter represent the Government's present equity in the Railways (see p. 648 for further details). There is, therefore, no comparability between the 1938 and 1939 figures and those for previous years as regards these items.

In the *Public Accounts* for the fiscal year ended Mar. 31, 1939, certain minor changes were made in the form of presentation of the balance sheet. On the liability side a new heading was set up entitled "Floating Debt", under which was shown funded debt matured and outstanding, interest due and outstanding, stock payable on demand and outstanding cheques. Sinking funds, formerly carried as a deduction from the funded debt, are now carried as an asset. In former years the net liability of the Dominion in respect of provincial debt accounts was shown on the liability side of the balance sheet. In the balance sheet for Mar. 31, 1939, the gross liability is shown on the liability side and the deductions applicable thereto as an asset. However, to preserve the continuity of the following five-year table, these changes have not been made and the figures for 1939 are shown on the basis followed in previous years.

## 1.—Balance Sheets of the Dominion of Canada, as at Mar. 31, 1935-39.

NOTE.—Dashes indicate that the items were not applicable in the years so indicated.

<sup>1</sup> Direct liabilities only. Indirect liabilities or guarantees given by the Dominion of Canada are listed in Table 28, at pp. 862-863.

## Subsection 2.—Receipts and Disbursements.

The receipts of the Dominion Government on Ordinary Account for the fiscal year 1939, showed a decrease of \$12,280,875 as compared with the previous year while total receipts were reduced by \$14,521,395. The regular expenditure on ordinary account decreased by \$1,859,208, though total expenditures were \$18,654,980 higher than for 1938. There was an increase of \$50,891,744 in the net debt (gross debt less active assets) during the year. (See Table 26 for interest-bearing debt.)

**Changes in the Public Accounts, 1936.**—Several important changes were made under various headings in the Public Accounts for 1936. On the revenue side "War and Demobilization Receipts", previously carried as "Special Receipts", were transferred to Ordinary Account (Casual Revenue). On the expenditure side several recurring items were also transferred from "Special" to "Ordinary", as follows: cost of loan flotations, representing flotation costs of new loans and annual charges for amortization of bond discount; the Government's annual contribution to the Superannuation Fund; the annual payment to maintain the reserve in the Government Annuities Fund; adjustment of War claims; and expenditures made under the Railway Grade Crossing Act. A new category was established under the heading "Government-Owned Enterprises", to cover expenditures incurred by the Government on account of the Canadian National Railways, the Canadian National Steamships, and various Harbour Commissions. Other major changes were the establishment of a separate category for Write-down of Assets, and transference of payment of Old Age Pensions from the Department of Labour to the Department of Finance.

In Tables 2, 3, and 8 the new classification of items has been adopted for the 1936, 1937, 1938, and 1939 figures and the figures for 1935 have been adjusted to the new basis. The result is that the figures for 1935 as given in the tables do not conform with the figures shown in the Public Accounts for that same year, because

of the new set-up after 1935, but the figures below are on a comparable basis throughout. Certain new items are introduced for 1938, but these do not affect the comparability of the figures of earlier years.

## 2.—Details of Revenue Receipts, Fiscal Years 1935-39.

NOTE.—See text above *re* adjustment of statistics for 1935. Dashes in this table indicate that the items were not applicable in the years so indicated.

<sup>1</sup> Includes pensions to blind persons. <sup>2</sup> It was found that the tables heretofore used for valuation understated the liability on annuity contracts. This exceptional amount is due to the adoption of tables in conformity with the mortality experience of previous years.

<sup>3</sup> Prior to 1937-38, general administration expenses were not segregated from other expenditures of the respective services of the Departments that were amalgamated to form the Department of Mines and Resources and the Department of Transport. The figures for 1939 represent only Departmental administration, other administration cost being included, as in other departments, under the respective services.

<sup>4</sup> Prior to 1937-38 expenditures on Civil Aviation, now the Air Service Branch of the Department of Transport, were included under expenditures for the Air Service Branch of the Department of National Defence.

<sup>5</sup> Relief expenditures for 1937, 1938, and 1939 were continued under the Unemployment Relief and Assistance Acts, 1936 and 1937, and other items shown immediately following.

## 4.—Principal Items of Dominion

NOTE.—From 1868 to 1906, inclusive, the fiscal years ended on June 30; after 1906, on Mar. 31. Figures for

Year.	Ordinary Expenditures.							
	Interest on Debt.	Old Age Pensions.	Pensions, War, Military and Civil.	Public Works.	National Defence.	Subsidies to Provinces.	Post Office. <sup>1</sup>	Total Ordinary Expenditures. <sup>2</sup>

<sup>1</sup> For detailed statement, see Table 12, p. 844.<sup>2</sup> Includes various smaller items of revenue receipts for most earlier years and special receipts since 1921.<sup>3</sup> Nine months.<sup>4</sup> Year tax imposed.<sup>5</sup> Figures for 1930 and following years conform with new set-up of Public Accounts as established in 1936 (see p. 833).**7.—Per Capita Figures of Taxation, Total Revenue Receipts, Expenditures on Consolidated Fund Account, and Total Expenditures, Fiscal Years 1868-1939.**

NOTE.—The years marked with an asterisk (\*) are those of the Censuses, Apr. 6, 1891; Apr. 1, 1901; June 1 1911, 1921, and 1931. For the intercensal years the populations are estimated as at June 1 (see p. 113). See Tables 1-6 for the figures of revenue and expenditure on which this table is based. Figures for intermediate years not shown between 1868 and 1885 will be found at p. 849 of the 1938 Year Book.

<sup>3</sup> Revised since the

### Subsection 3.—Analysis of Revenue from Taxation.

As shown in Table 7, of the per capita revenue receipts of \$44.38 in 1939, \$38.51, or 86.77 p.c., were obtained by taxation. Customs receipts accounted for \$78,751,111, or only 18.07 p.c. of the total taxation revenue of \$435,706,794, while excise duties amounted to \$51,313,658, or 11.78 p.c. Thus the two main sources of taxation revenue, prior to the War of 1914-18, accounted for less than 30 p.c. of the taxation revenue in 1939.

Customs receipts constitute a single item in the Public Accounts and cannot be further analysed here. This treatment of taxation revenue is therefore confined to excise duties and war tax revenue. Excise statistics cover distillation and alcohol and tobacco taken out of bond and those of war tax revenues include an analysis of the occupations and income classes of individuals and corporations contributing to the income tax, together with a statement of the income upon which taxes were assessed.

**Excise Duties.**—Excise duties proper are presented here together with a summary of the excise tariff and statistics arising as a by-product of administration, such as the quantities of grain and other products used in distillation and the quantities of excisable goods taken out of bond. Excise war taxes are shown under the heading "War Tax Revenue".

**Canadian Excise Tariff.**—The following is a statement of the Canadian excise tariff, as existing at Jan. 1, 1940:—

1. Spirits distilled in Canada, per proof gal.. \$ 7.00	3. Beer or Malt Liquor:—
Canadian brandy, per proof gal..... 6.00	(a) Brewed in whole or part from any substance other than malt, per gal..... \$ 0.30
Except Spirits as follows:—	(b) Imported (in addition to any of the duties otherwise imposed), per gal..... 0.07
(a) Used in a bonded manufactory for medicines, extracts, etc., per proof gal.... 1.50	4. Malt:—
(b) Used in a bonded manufactory for perfumes, per proof gal..... 1.50	(a) Produced in Canada and Screened, per lb..... 0.10
(c) Used in a bonded manufactory for vinegar, per proof gal..... 0.60	(b) Imported, per lb..... 0.10
(d) Used for chemical compositions approved by Governor in Council, per proof gal..... 0.15	5. Malt Syrup:—
(e) Sold to licensed druggists for pharmaceutical preparations, per proof gal.... 1.50	(a) Produced in Canada, per lb..... 0.15
(f) Distilled from native fruits and used by a licensed wine manufacturer for fortification of native wines, per proof gal..... Free	(b) Imported, per lb..... 0.21
2. Spirits imported (in addition to any of the duties otherwise imposed), per proof gal..... 0.30	6. Tobacco, Cigars, and Cigarettes:—
	(a) Manufactured tobacco, per lb..... 0.25
	(b) Cigarettes weighing not more than 3 lb. per M, per M..... 5.00
	(c) Cigarettes, weighing more than 3 lb. per M, per M..... 11.00
	(d) Cigars, per M..... 3.00

A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities to universities, scientific or research laboratories, or to any bona fide public hospital for medicinal purposes only.

**Revenue from Excise Duties.**—In the fiscal year 1939, tobacco, including cigarettes, supplied about 63 p.c. of the revenue from excise duties.

**9.—Details of Excise Duties Collected, Fiscal Years 1934-39.**

(As shown in the Report of the Commissioner of Excise.)

The quantity of spirits manufactured has fluctuated greatly since 1920, varying from the low of 2,356,329 proof gal. in that year to the high of 16,816,312 proof gal. recorded in 1929.

**Alcohol and Tobacco Taken Out of Bond.**—Record amounts of tobacco and cigarettes were taken out of bond for consumption in 1939. While figures for malt and malt liquor were below those for 1938, they were greater than for the years immediately preceding.

# 11.—Quantities of Spirits, Malt Liquor, Malt, and Tobacco Taken Out of Bond for Consumption, Fiscal Years 1921-39.

NOTE.—For years prior to 1900, see 1916-17 Year Book, p. 528; for 1901-10, see 1933 Year Book, p. 840; and for 1911-20, the 1938 Year Book, p. 855.

<sup>1</sup> Including snuff.

<sup>2</sup> Exclusive of imported spirits but inclusive of non-potable spirits.

**War Tax Revenue.**—An account of the various war taxes imposed in 1915 and subsequently has already been given at p. 829 in the introduction to this Section. For convenience of reference, amounts received from these taxes since first instituted are segregated and the totals paid to the Receiver General are given in Table 12. The taxes imposed on banks, trust and loan companies, and insurance companies are collected by the Department of Finance; excise taxes and income taxes are collected by the Department of National Revenue.

# 12.—War Tax Revenues Received by the Receiver General, Fiscal Years 1915, 1919, 1920, and 1926-39.

NOTE.—Statistics for the intervening years from 1916 to 1925 will be found at p. 851 of the 1938 Year Book. Receipts for these years are included in the totals.

<sup>1</sup> The figures are for special taxation only, imposed in 1915 as outlined at p. 829.

<sup>2</sup> Exclusive of life and marine insurance companies.

<sup>3</sup> Although this tax was not charged upon profits accruing after Dec. 31, 1920 (see 14-15 Geo. V, c. 10), belated revenue therefrom continued to be received until 1933.

**Income Tax.**—One of the chief sources of revenue of the Dominion Government is the income tax which, with the sales tax, now provides much the larger part of what is still known as war tax revenue. The latter tax was inaugurated in 1915 but the income tax was not resorted to as a source of revenue until 1919 and, whereas during the first year of its operations \$9,350,000 was collected, the Dominion coffers were enriched to the extent of \$142,000,000 in 1939.

<sup>1</sup> Not segregated into individual and corporation groups for this year. <sup>2</sup> In 1927 the exemption limits, in the case of individuals, from \$2,000 to \$3,000 for married, and from \$1,000 to \$1,500 for single persons came into operation; in 1933 the limits were \$2,400 and \$1,200, and in 1934 the reduction to the old basis was effective. The effects are reflected in the changes in the numbers of taxpayers.

**15.—Amounts of Income Tax Collected, by Provinces, Fiscal Years 1935-39.**

NOTE.—Includes the 5 p.c. tax on interest and dividends imposed in 1933. (See pp. 848-849.)

Table 18 shows the amount received from the special 5 p.c. tax of 1933 (c. 41, 1932-33) imposed at the source on interest (if paid solely in Canadian funds) and dividends paid by Canadian debtors to non-residents of Canada, and on interest and dividends received by Canadian residents by way of bearer coupons or cheques where such are payable by Canadian debtors, optionally or otherwise, in foreign currencies, and such coupons or cheques are cashed in a currency that is at a premium over Canadian funds. The receipts are classified by provinces, no further classification being available.

**Subsection 4.—Subsidies and Loans to Provinces.**

**Subsidies.**—By the provisions of the British North America Act and subsequent arrangements entered into from time to time, the Dominion makes certain annual payments, listed below, to the provinces.

*Interest on Debt Allowances.*—By the terms of the union of the provinces at Confederation in 1867, the Dominion assumed all the outstanding debts and liabilities of the provinces and undertook to pay, except in the case of Ontario and Quebec, interest at 5 p.c. on the amounts by which the actual per capita indebtedness of the provinces fell short of a basic debt allowance calculated at approximately \$25 per capita. On the subsequent entry of additional provinces into Confederation, similar arrangements were effected regarding the assumption of their pre-Confederation indebtedness. From time to time, adjustments have been made in the basis of calculation of the debt allowances of the various provinces and the Dominion pays interest at 5 p.c. per annum on the amounts by which the actual debts of the provinces, on their entry into Confederation, fell short of the allowed debts as adjusted. The aggregate annual payment from the Dominion to the provinces in respect of interest on debt allowances is \$1,609,386.

*Allowances for Government and Legislature.*—Under the terms of the Union, annual grants of specific amounts were made to the various provinces for the support of their governments and legislatures. These fixed amounts vary with the population of the provinces according to the following scale, approved in 1907:—

Where population is—	\$
Under 150,000.....	100,000
150,000, but does not exceed 200,000.....	150,000
200,000, “ “ 400,000.....	180,000
400,000, “ “ 800,000.....	190,000
800,000, “ “ 1,500,000.....	220,000
Over 1,500,000.....	240,000

The aggregate annual allowances presently paid under this head amount to \$1,750,000.

*Allowances per Head of Population.*—Under the British North America Act of 1867, a grant of 80 cents per head of the population was allowed to each province. The British North America Act of 1907 provided that the grant would be paid to each province at the rate of 80 cents per head up to a population of 2,500,000, and at the rate of 60 cents per head for so much of the population as exceeds that number. Such allowances paid to the provinces in the fiscal year 1939 reached \$8,111,844.

*Special Grants.*—In the case of certain of the provinces, grants have been added to the original scale of subsidies in view of special circumstances obtaining, which, for the fiscal year 1939, amounted in aggregate to \$2,280,880 as set forth below:—

*Prince Edward Island.*—A special grant of \$195,000 less a deduction of \$39,120 (net grant of \$155,880).

*New Brunswick.*—An annual grant of \$150,000 since 1875 in consideration of the repeal of lumber duties reserved to the provinces by the B.N.A. Act of 1867.

*Manitoba.*—A special grant on the basis of population amounting at present to \$562,500 per annum.

*Saskatchewan and Alberta.*—Receive an annual sum as compensation for loss of Public Lands revenue, based on their respective populations and amounting at present to \$750,000 for Saskatchewan and \$562,500 for Alberta.

*British Columbia.*—A special grant amounting at present to \$100,000 per annum.

*Other Special Grants.*—In addition to the above, there are other special grants paid to the Maritime Provinces and British Columbia that are voted annually, aggregating, in the fiscal year 1939, \$3,225,000 as follows:—

Prince Edward Island.....	\$ 275,000
Nova Scotia.....	1,300,000
New Brunswick.....	900,000
British Columbia.....	750,000

Temporary grants were made to the Provinces of Manitoba and Saskatchewan in the amounts of \$750,000 and \$3,500,000, respectively, in the fiscal year 1939.

<sup>1</sup> Compensation for lands and allowances for buildings.      <sup>2</sup> Allowances in lieu of debt.      <sup>3</sup> Does not include special and temporary grants paid to Maritime Provinces, Manitoba, Saskatchewan, and British Columbia.

**Loans to Provinces.**—All of the provincial loans recently advanced by the Dominion have been made to the western provinces under the authority of relief legislation beginning with the Unemployment and Farm Relief Act, 1931, and these have been secured by interest-bearing treasury bills of the respective provinces, the rate being 3 p.c. since July 1, 1936. The sum total of such loans outstanding as at Mar. 31, 1940, was \$175,880,650 less write-offs of \$18,487,055, making net loans outstanding \$157,393,595.

In addition to these, however, there were also outstanding at that date \$2,504,000 of housing loans, being the balance of loans made to the provinces in the years following the War of 1914-18, on the authority of Orders in Council passed in 1918 and 1919, and of the Appropriation Acts of 1920 and 1921. Upon these loans the Province of Ontario repaid the whole of the advances in 1928, the Province of Quebec repaid in full in 1937, and New Brunswick in full in 1938. The other provinces concerned have, in most cases, reduced their indebtedness from year to year.

## 22.—Loans to Provincial Governments Under the Relief Acts, by Provinces, Fiscal Years 1936-40.

NOTE.—Figures for 1932 (the first year such loans were made) and 1933 will be found at p. 844 of the 1936 Year Book, and for 1934 and 1935 at p. 858 of the 1938 edition.

**Subsection 5.—National Debt.**

The gross national debt of Canada on Mar. 31, 1914, was \$544,391,369, as against assets of \$208,394,519, leaving a net debt of \$335,996,850. Comparatively small as was this debt, it was a debt incurred almost altogether either for public works of general utility which, like the Intercolonial and transcontinental railways and the canal system, remained assets, though perhaps not realizable assets, of the nation, or was expended as subsidies to enterprises, which, like the Canadian Pacific Railway, though not government-owned, assisted greatly in extending the area of settlement as well as the productive and, therefore, the taxable capacity of the country. Broadly speaking, it was a debt incurred for productive purposes. Also, it was mainly held outside the country, the principal of the Dominion funded debt payable in London being \$302,842,485 on Mar. 31, 1914, as against only \$717,453 payable in Canada.

The great changes brought about in the national debt during the 26 years from 1914 to 1939 have been: (1) the enormous increase in net debt from \$335,996,850 to \$3,152,559,314; (2) the gross debt, having been incurred largely for war purposes, is not represented by corresponding assets; (3) the debt is now mainly held in Canada, \$2,510,515,435 being payable in Canada at Mar. 31, 1939.

**Recent Funded Debt Operations.**—Conversions and other national debt operations carried out between 1914 and 1930 are dealt with at pp. 842-843 of the 1933 Year Book; those between 1931 and 1934 at pp. 905-907 of the 1934-35 Year Book; those of the fiscal year 1935 at pp. 845-846 of the 1936 Year Book; those of the fiscal year 1937 at p. 837 of the 1937 Year Book; and those of the fiscal year 1938 at p. 898 of the 1939 edition. The following review carries the summary down to Mar. 31, 1940.

On May 18, 1938, the Dominion Government offered in Canada an issue of \$50,000,000 in bonds of two maturities, dated June 1, 1938. A six-year 2 p.c. bond due June 1, 1944, priced at 99.375 and accrued interest, and yielding approximately 2.11 p.c. was offered in the amount of \$20,000,000, and a twenty-year 3 p.c. bond, due June 1, 1958, priced at 99.00 and accrued interest, and yielding approximately 3.07 p.c. comprised the remaining \$30,000,000. In addition to the \$50,000,000 of new money called for, the holders of 2 p.c. bonds due Oct. 15, 1938 (outstanding in an amount of \$90,000,000), were given the opportunity of conversion into bonds of the new issue, the outstanding maturity being convertible, with final coupons attached, at 100.80 p.c. in exchange for the new bonds at the offering price. Under this offering, conversions were made to the extent of \$89,825,000, all but \$175,000 of the outstanding issue being refunded. The conversion subscriptions were allotted between the offering maturities in the amount of \$70,625,000 for the six-year 2 p.c. bonds, and \$19,200,000 for the twenty-year 3 p.c. bonds. Thus, the total amount outstanding of the former maturity is \$90,625,000, and of the latter, \$49,200,000.

On July 1, 1938, the School Land Debenture Stock, held by the western provinces in the amount of \$33,293,471, matured and was renewed for another year at the prevailing rate of 4 p.c.

For the purpose of meeting a New York maturity of \$40,000,000 in 2 p.c. notes issued Jan. 1, 1936, and falling due on Jan. 1, 1939, the Dominion Government on Nov. 17, 1938, sold an issue of thirty-year 3 p.c. bonds in the amount of \$40,000,000 in New York. These bonds were sold to an underwriting syndicate at 95.25 and accrued interest, or a cost basis of 3.25 p.c.

Early in 1939 there were sold to the Chase National Bank of the City of New York and a group of associated banks, \$20,000,000 twenty-seven month 1½ p.c.

notes dated Feb. 1, 1939, and maturing May 1, 1941. The notes were sold at 99·75 p.c., a cost basis of approximately 1·36 p.c. The proceeds of the issue were used for the purpose of supplying the Government with United States funds to enable it to make temporary loans, or to reimburse the Government in part for temporary loans, made to the Canadian National Railway Company for the purpose of redeeming certain obligations of the Railway Company that matured during January and February, 1939. Some of these obligations were payable in London and some were payable optionally in New York, London, or Canada.

An issue of \$134,500,000 in two maturities was next sold on the domestic market. A short-term maturity in the amount of \$95,500,000, dated May 15, 1939, and maturing May 15, 1942, bore an interest rate of  $1\frac{1}{2}$  p.c. and was priced at 99·375 to yield 1·72 p.c. A maturity of longer term in the amount of \$39,000,000 dated May 15, 1939, and maturing June 1, 1958, bore a 3 p.c. rate, and was priced at 98·50 to yield 3·10 p.c. Conversions of outstanding bonds of the following issues were accepted against the new maturities: 1 p.c. bonds due June 1, 1939; 4 p.c. bonds due Oct. 15, 1939;  $2\frac{1}{2}$  p.c. bonds due Oct. 15, 1939; and 2 p.c. bonds due Nov. 15, 1939. These issues were converted to a total of \$84,500,000, while \$50,000,000 of the new issue was sold for cash.

The first issue of the war period was sold directly to the Canadian chartered banks at par in the amount of \$200,000,000, dated Oct. 16, 1939, and maturing Oct. 16, 1941, bearing a 2 p.c. rate. The proceeds of this issue were to be used in part for the redemption of the Dominion of Canada 1930-50 registered stock outstanding in London in the amount of £28,162,775 (slightly in excess of \$125,000,000 at the rate of exchange then prevailing) against which a sinking fund of £7,733,000 was held. This stock was subject to call at par at any time after July 1, 1930, on six months' notice, and notice was given for redemption on Apr. 16, 1940. The ultimate effect of this operation was to make Canadian dollars available to the British Government for the purchase of supplies in Canada. The remaining part of the issue was to provide for the redemption of domestic maturities falling due in October and November, 1939, to a total of \$28,064,500, and for general purposes of the Government.

Early in 1940 the Government sold its first war loan. Dated Feb. 1, 1940, this issue bore an interest rate of  $3\frac{1}{4}$  p.c. and was priced at 100. Provision was made for redemption of the issue by annual drawings on Feb. 1, 1948 to 1952; 20 p.c. of the outstanding amount to be redeemed each year at the following prices: on Feb. 1, 1948, 1949, and 1950, at 100; on Feb. 1, 1951, at 100·50, and on Feb. 1, 1952, at 101. In addition to an amount of \$200,000,000 issued for cash, \$50,000,000 of the new loan was issued in conversion of part of the 3 p.c. loan maturing Mar. 1, 1940, so that the total amount of the new loan outstanding was \$250,000,000.

To provide funds to meet in part the unconverted portion of the Mar. 1, 1940, maturity, an issue of \$40,000,000 five-year 2 p.c. bonds was sold to the Bank of Canada at 99·375. This issue was dated Mar. 1, 1940, and matures Mar. 1, 1945.

In the past five years a market for short-term treasury bills that has proven highly satisfactory has been built up in Canada. Each issue has, with two exceptions (where the bills were sold direct to the Bank of Canada), been offered for public tender. A complete list of treasury bills sold by public tender for the period Mar. 1, 1934, to Feb. 15, 1937, appears at p. 838 of the 1937 Year Book. The sales since that date are as follows:—

## TREASURY BILLS SOLD IN CANADA, MAR. 1, 1937, TO MAR. 31, 1940.

<sup>26</sup> Subject to redemption in whole or in part on or after Sept. 15, 1966, on 60 days' notice.

**The Interest-Bearing Debt of Canada.**—Something of the extent of the burden of national debt being carried by the Canadian people may be realized from the fact that, for the fiscal year 1939, the interest charges on the total interest-bearing debt amounted to about 30 p.c. of the total receipts from taxation and nearly 26 p.c. of the receipts from all sources.

Before the War of 1914-18, interest rates were comparatively moderate, but the unprecedented expenditure of the world's capital in that gigantic struggle led, in all the participating countries, to the raising of enormous loans at comparatively high rates of interest, which in many cases still have to be paid until refunding becomes possible under the terms of the contracts made between the nations and their creditors. Thus, in Canada, the average rate of interest paid upon the direct interest-bearing obligations of the nation, which was only 3.368 p.c. at Mar. 31, 1913, rose to 5.164 p.c. at Mar. 31, 1922, and fell gradually to 3.528 p.c. at Mar. 31, 1939.

<sup>1</sup> Includes bonds purchased and held by the Treasury for sinking funds.

<sup>2</sup> In 1936 an amount of \$11,827, being compensation to seigneurs, previously included under Savings Bank Deposits, Trust and Other Funds, was transferred to Bonds, Debentures, and Treasury Bills.

**Guaranteed Debt of the Dominion.**—Besides the direct debt of the Dominion, already dealt with, there are also large indirect obligations, arising mainly out of the guarantee of securities, by the Dominion, of the railway lines that now form the Canadian National Railways, and the subsequent extensions thereof. Together with these are other smaller indirect obligations, originating in the Government's guarantees of the bonds of the Canadian National Steamship services and of the bonds of its Harbour Commissions, issued in the main for harbour improvements. Since 1932 guarantees of certain bank loans have been made under the various Relief Acts. With the commencement of business of the Bank of Canada on Mar. 11, 1935, the guarantee [authorized by Sect. 27 (6) of the Bank of Canada Act] of the deposit required to be maintained in the Bank of Canada by every chartered bank, came into force. This guarantee will require to be implemented "in the event of the property and assets of the Bank being insufficient to pay its liabilities, and if the Bank suspends payment of any of its liabilities". Under the terms of the Home Improvement Loans Guarantee Act, 1937, the Government guarantees chartered banks and other approved lending institutions against losses up to 15 p.c. of the aggregate value of loans made by each such institution for the financing of repairs, alterations, and improvements to rural and urban dwellings. The Act provides that the amount of guarantees shall not exceed \$50,000,000 and therefore the limit of the Government's guarantee is \$7,500,000. Under the terms of the Saskatchewan Seed Grain Loans Guarantee Act, 1936, the Dominion Government guaranteed the principal and interest of loans made in Saskatchewan by chartered banks for seed grain assistance to farmers during the spring of 1936. These loans were primarily guaranteed by the Province of Saskatchewan and the Dominion's liability was only to the amount that the Province was unable to fulfil its guarantee. The amount of this guarantee was \$2,555,113.

Under the terms of the Seed Grain Loans Guarantee Act, 1937, the Dominion Government guaranteed the principal and interest of loans made in Alberta, Manitoba, and Saskatchewan during the spring of 1937. The loans in each province were primarily guaranteed by the provincial government and the Dominion's liability was only to the amount of the guarantee that the province was unable to meet. The amount of such loans outstanding at July 31, 1939, was \$6,998,821, divided as follows: Manitoba, \$89,425; Saskatchewan, \$6,359,144; and Alberta, \$550,251.

Under the Act of 1938, such guarantees during the spring of 1938 were extended only to Alberta and Saskatchewan and the liability of the Dominion Government was not to exceed \$1,900,000 for Alberta and \$14,500,000 for Saskatchewan. In the case of Alberta, the principal amount guaranteed was \$1,089,483. The principal amount guaranteed in the case of Saskatchewan has not yet been determined.

Under the terms of an Order in Council, dated Aug. 5, 1938, passed pursuant to the Canadian Wheat Board Act, a price of 80 cents per bushel (basis No. 1 Northern, Fort William) was fixed as the basic price to be paid by the Canadian Wheat Board

for all wheat of the 1938 crop delivered to the Board by producers. The Board's operations in respect of the 1938 crop were financed by loans obtained from a group of chartered banks under guarantee of the Dominion Government. The amount of the guaranteed bank loans outstanding at Mar. 31, 1939, was \$61,155,470.

The guarantee of the Dominion to the Winnipeg Grain and Produce Clearing Association, Limited, arising out of transactions and trades made by the Canadian Wheat Board, continues. No liability in connection with this guarantee accrues from day to day, as margin deposits are made by the Board to the Association daily.

In 1935, the Canadian Co-operative Wheat Producers, Limited, purchased oats on account of the Province of Saskatchewan with the proceeds of bank loans guaranteed by the Dominion. As at Mar. 31, 1939, the amount of such guaranteed bank loans outstanding was \$173,665. After the end of the fiscal year, these bank loans were paid off with no liability accruing to the Dominion Government.

## 27.—Securities Guaranteed by the Dominion Government (Amounts Held by the Public), as at Mar. 31, 1914-39.

NOTE.—Dashes in this table indicate that there were no guarantees of the type shown for the corresponding years.

## Section 2.—Provincial Public Finance.\*

Provincial Governments in Canada are in the position, under Sect. 118 of the British North America Act, 1867 (30 and 31 Vict., c. 3), and the British North America Act, 1907 (7 Edw. VII, c. 11), of having a considerable assured income in subsidies from the Dominion Treasury. Details of these payments are given for the years 1934 to 1939 at pp. 850-851. In addition, through their retention of ownership of their lands, minerals, and other natural resources, those provinces that, by the voluntary action of their previously existing governments, entered Confederation, raise considerable revenue through land sales, sales of timber, mining royalties, leases of water powers, etc., while the Prairie Provinces, which have controlled their own natural resources since 1930, formerly received from the Dominion special grants in lieu of land revenues. Further, under Sect. 92 of the British North America Act, provincial legislatures are given authority to impose direct taxation within the province for provincial purposes and to borrow money on the sole credit of the province. The total revenues received by Provincial Governments for their respective fiscal years ended in 1937 are analysed by source at pp. 912-913 of the 1939 Year Book.

Prior to the opening of the present century, provincial receipts and expenditures were generally moderate, as may be seen from Table 29. The demand, more especially in Ontario and the West, for increased services from governments, particularly in respect of education, sanitation, and public ownership and operation of public utilities; and the performance of these functions, necessitated increased revenues, which had, in the main, to be raised by taxation. Among the chief methods of taxation to be employed has been the taxation of corporations and estates, succession duties showing a considerably increased yield even within the comparatively short period of twenty-two years from 1916 to 1938 covered by the statements compiled by the Finance Branch of the Bureau of Statistics.† The fact that provincial government is cheaper per head in the eastern provinces (although both Ontario and Nova Scotia have shown large per capita increases in recent years) is evident from Table 30. This, however, is not to be taken as evidence that the larger services rendered to the public are not worth what is being paid for them.

For the half-century subsequent to Confederation, the provincial accounts, published by each Government according to its own system of accounting, were quite incomparable as among the provinces, a fact much regretted by students of provincial public finance. Upon the creation of the Dominion Bureau of Statistics in 1918, its Finance Branch undertook the work of placing the various provincial public accounts on a comparable basis, correlating, for example, the revenue derived from succession duties, taxation of corporations, sales of public lands, royalties on forest, mineral, and fisheries products, as well as the expenditures on such services as agriculture, civil government, education, and public works. As the result of the Bureau's exhaustive analysis of the provincial public accounts, a summary statement of the ordinary receipts and expenditures of the Provincial Governments

\* Revised by Col. J. R. Munro, Chief of the Finance Branch of the Dominion Bureau of Statistics. This Branch issues detailed statements on Provincial Finance that may be obtained from the Dominion Statistician. For a list of these publications, see Section 1 of Chapter XXIX.

† The succession duties collected by the provinces in 1938 amounted in the aggregate to \$36,416,605, as compared with \$1,020,972 as recently as 1904, an increase of more than 35-fold in 34 years. The aggregate revenue raised by taxation of corporations, land, income, and miscellaneous (exclusive of gasoline taxes, succession duties, and amusement taxes), increased from \$7,217,548 in 1916 to \$53,742,101 in 1938, an increase of 745 p.c. in 22 years.

appears for the first time in the 1919 Year Book. The various items of receipts and expenditures were classified under appropriate headings and a uniform terminology was adopted. From these statements it is possible to ascertain the amounts received and expended in each year under the respective headings for each province, as well as for the provinces collectively. The detailed figures for the years 1916 to 1920 will be found at pp. 680-685 of the 1921 Year Book, those for 1921 at pp. 786-791 of the 1922-23 Year Book and those for 1922 to 1926 at pp. 836-841 of the 1927-28 Year Book.

The Bureau now makes more extensive analyses of the finances of the provinces, including capital and trust accounts as well as ordinary revenue and expenditure. These analyses are based on a uniform classification adopted at a conference held in 1933 between provincial treasury officials and the Dominion Bureau of Statistics. This new extended analysis, however, does not affect the comparability of the summary totals of Table 29.

### Subsection 1.—Provincial Revenues and Expenditures.

**Ordinary Revenues and Expenditures.**—Revenues have grown very rapidly over the period covered in Table 29 and expenditures have more than kept pace. Since 1916, i.e., in the short space of 21 years, while total revenues of all provinces have shown an increase of 437 p.c., ordinary expenditures have increased 371 p.c. Detailed ordinary revenues and expenditures for 1937 are shown at pp. 912-915 of the 1939 Year Book. Complete figures for 1938 are not available at the time of going to press, and are not included in the tables, but certain items of revenue are given in the textual treatment of the growth of provincial taxation.

**Growth of Provincial Taxation.**—In earlier years Dominion subsidies and revenues arising out of the natural resources of the provinces and from fees for specific services rendered to the citizens nearly sufficed to cover the whole expenses of government and rendered a resort to taxation for provincial purposes practically unnecessary in most of the provinces. However, the great increase in the functions of government since the commencement of the present century has put an end to this state of affairs. The aggregate amount of taxation for provincial purposes in the fiscal years prior to 1916 is unfortunately not available. Since that time provincial taxation has increased from \$12,521,816 in 1916 to \$131,755,348 in 1938 (exclusive of motor-vehicle licences, liquor traffic profits, and other licences and permits, etc.), or over ten-fold in 22 years.

The increase in the use of automobiles, both for commercial purposes and for pleasure, is clearly demonstrated by the growing revenues from licences and permits issued by the Provincial Governments. In 1921 the total revenue of all provinces from automobile licensing alone amounted to \$7,857,751. It has since fluctuated considerably, reaching \$21,735,827 in 1929 but declining to \$19,952,575 in 1931. The revenue from this source in 1938 was \$25,606,890.

The gasoline tax is now generally adopted as a means of increasing provincial receipts and has proven to be a lucrative source of revenue. In 1923 only Manitoba and Alberta showed gasoline-tax revenue, the total being \$280,404. In 1924 the five Provinces of Prince Edward Island, Quebec, Manitoba, Alberta, and British Columbia collected such revenue to the amount of \$559,543, while in 1925 the same provinces, with Ontario added, collected \$3,521,388. In 1926 all provinces, except Saskatchewan, collected gasoline taxes to the amount of \$6,104,716, in 1927 to \$7,615,907, and in 1928 to \$9,151,735; thereafter, gasoline taxes were collected in all provinces and amounted to \$17,237,017 in 1929, \$20,956,590 in 1930, \$23,859,067

in 1931, \$24,987,273 in 1932, \$25,931,480 in 1933, \$26,812,275 in 1934, \$20,474,977\* in 1935, \$32,310,353 in 1936, \$35,415,061 in 1937, and \$39,688,974 in 1938. The higher yields in recent years, however, were due partly to higher rates of taxation. The general rates of taxation at present (1940) in force are 10 cents in the Maritime Provinces, 8 cents in Quebec and Ontario, and 7 cents in the Western Provinces; certain exemptions are allowed in each province.

The provincial revenues from the liquor traffic increased considerably between 1925 and 1930, but subsequently declined until 1934, again increasing in 1938. The adoption of government control of the sale of liquor in one province after another, until now it exists in all but Prince Edward Island where prohibition is still in force, has resulted in trading profits, licensing revenues, and permit fees, all of which have swelled the provincial revenues. Prior to the adoption of government control, such revenues were not available to the provinces. In 1925 the total revenue collected by all provinces from the liquor traffic was \$8,964,824; in 1926 it was \$11,609,392, increasing to \$27,599,687 by 1929. In 1933 such revenue amounted to \$16,160,980, in 1934 to \$12,814,120, in 1935 to \$12,886,197, in 1936 to \$19,338,366, in 1937 to \$25,913,699, and \$27,962,194 in 1938. The method of control varies somewhat as between the provinces. In the majority of cases there are independent commissions or boards to administer the provincial liquor traffic Acts, but the accounting and trading profits are shown somewhat differently in the various provincial public accounts reports.†

**Fiscal Years of the Provinces.**—The fiscal years of the provinces are as follows: P.E.I., Dec. 31; N.S., Sept. 30 prior to 1935 and Nov. 30 thereafter; N.B., Oct. 31; Que., June 30; Ont., Oct. 31 prior to 1935 and Mar. 31 thereafter; Man. and Sask., Apr. 30; Alta. and B.C., Mar. 31.

\* The wide difference between the figure for 1935 and that for 1936 is accounted for largely by the change in the fiscal year for the Province of Ontario from Oct. 31 to Mar. 31, so that the Ontario figures for 1935 included in the 1935 total were for five months only.

† See Chapter XVII, pp. 626-630, and also the report of the Dominion Bureau of Statistics on "The Control and Sale of Liquor in Canada".

## 29.—Ordinary Revenues and Expenditures of the Provincial Governments for Their Respective Fiscal Years Ended in the Census Years 1871-1926 and in Each Year from 1931-37.

NOTE.—For provincial ordinary revenues and expenditures in all other provincial fiscal years since Confederation, see the 1932 Year Book, pp. 734-736. Figures for intervening years between 1916 and 1931 are given at p. 875 of the 1938 Year Book. For dates on which the fiscal years of the provinces end, see text above.

### Subsection 2.—Provincial Debts and Assets.

**Bonded Indebtedness of the Provinces.**—Of the total liabilities of the provinces the major part is represented by bonded debt owing to the public in Canada and abroad. The total gross bonded debt amounted to \$1,533,524,253 in 1938 as compared with only \$218,875,927 in 1916, an increase of over 600 p.c. in the 22 years. In addition to this bonded debt there were treasury bills outstanding on provincial accounts amounting to \$229,361,796 for 1938. The rapid rise in the bonded debt of the provinces is accounted for largely by the development of public ownership of utilities (such as the "Hydro" in Ontario), the extension of the highways and surfaced roads systems in all provinces (highway debentures outstanding in 1938 accounting for \$639,658,405 of the provincial debt), and the requirements for the promotion of industrial activities and public and social welfare. These demanded heavy expenditures that could not easily be met out of current revenue. The borrowings, while increasing the public debt, are in the main considered justifiable, as the public utilities are in most cases meeting from their revenues the interest on indebtedness incurred in their construction, and the provincial assets generally are sound enough to take care of capital investment for other services that are necessary to develop the country.

#### 31.—Gross Bonded Debt (Exclusive of Treasury Bills) of Provincial Governments, by Provinces, for Their Respective Fiscal Years 1916, 1921, 1926, and 1931-38.

NOTE.—Figures for intervening years, from 1917-30, are given at p. 877 of the 1938 Year Book. For dates on which the fiscal years of the provinces end, see p. 866.

**Total Provincial Public Debt.**—The statistics of Table 32 have been assembled on as comparable a basis as possible, but differences in Provincial book-keeping are accountable for minor incomparabilities. New Brunswick, for instance, regards treasury bills as current debt, while Ontario does not consider as "available" assets such items as Dominion Debt Account; Common School Fund; Quebec Turnpike; and Plant, Live Stock, and Equipment. More complete details are given in the footnotes to the table at p. 13 of the Bureau's bulletin "The Public Debt of Canada, Dominion and Provincial Governments, 1938, and Municipalities, 1937".

32.—Debts of Provincial Governments at the Ends of Their Respective Fiscal Years in 1937 and 1938, Showing Bonded Debt with Offsetting Sinking Funds, Treasury Bills, Other Direct Liabilities, Available Assets Offsetting Direct Liabilities, and Indirect Liabilities.

NOTE.—See text at p. 808 re minor variations in classification, and for dates on which the fiscal years of the provinces end, see text at p. 866. For details for 1935-36 see the 1937 Year Book, p. 883.

<sup>1</sup> In addition to the available assets shown most of the provinces had partially secured loans and advances for railways, dyking districts, unemployment relief, and seed grain relief, etc., a large portion of which will be realizable.

<sup>2</sup> Not including the outstanding amount of a secured loan to the Banque Canadienne Nationale (\$12,527,239 in 1938). This item is included here in "Assets available".

**Interest Payments and Receipts of the Provinces.**—The current burden of a debt in the case of a continuing organization is represented by interest payments, which may be offset in whole or in part by interest received on loans made to provincially owned public utilities or to corporations or individual citizens. In a country where provincial public policy varies widely with regard to public ownership, it appears desirable to include a statement showing, for each province, the gross interest payments, the interest receipts, and the net interest payments. This information, which is subject to revision, is given below for the provincial years ended in 1938. (See text at p. 866 for respective dates.)

Province.	Gross Interest Paid.	Interest Received.	Net Interest Paid.	Net Interest Paid per Capita. <sup>1</sup>

<sup>1</sup> Estimates of population on which these figures are based are given at p. 103.

### Section 3.—Municipal Public Finance.\*

The existence of local self-governing units has always been characteristic of democratic societies, and nowhere more so than in Canada. The struggle for responsible government was naturally accompanied by an agitation for local self-government in the cities and towns of Canada and, after responsible government had been conceded, a complete system of municipalities was established throughout the old Province of Canada by the Municipal Act of 1849.† Under the division of powers made by the British North America Act between the Dominion and the Provincial Governments, legislation regarding municipal government, being a local matter, was naturally assigned to the provinces, which differ considerably with regard to their types of municipal organization. Thus, in Prince Edward Island the only incorporated municipalities are the City of Charlottetown and seven incorporated towns. In British Columbia seven of the 33 cities have fewer than 1,000 people, while there are no towns at all and only 18 villages; again, in the same Province the rural districts are mainly administered from the Provincial capital, there being only 28 rural municipalities. Finally, in Saskatchewan and Alberta

\* Revised by Col. J. R. Munro, Chief of the Finance Branch of the Dominion Bureau of Statistics. This Branch issues statements on "Financial Statistics of Urban Municipalities of 10,000 Population and Over", on "Bonded Indebtedness of Municipalities", and on "Assessment Valuations of Municipalities". For a list of publications see Chapter XXIX, Section 1, under "Finance".

† For a brief outline of the rise of the municipal system of Ontario, see 1922-23 Year Book, p. 108.

there exist local improvement districts (areas that have not as yet been organized into rural municipalities) where the taxes are levied, collected, and expended by the Provincial Governments. Such districts, however, may be regarded as on the way to becoming self-governing rural municipalities. Their statistics are therefore included in Table 33.

<sup>1</sup> Nova Scotia has 18 counties, some of which are 'municipalities', while others are divided into 'municipalities'.  
<sup>2</sup> There are 43 counties in all, geographically, but a number are united for municipal purposes.  
<sup>3</sup> Officially known as 'townships'.  
<sup>4</sup> Includes Flinflon Municipal District.

**Municipal Revenue from Taxation.**—As a result of accumulated borrowings to meet conditions peculiar to the depression, the relentless advance of interest charges against realizable taxation has brought about a condition in many municipalities where expenditures are out of all proportion to receipts, in spite of the fact that the trend of interest rates has been definitely downwards. It is natural under such conditions that the general subject of taxation should receive the increasing attention of the public and, of all forms of taxation, the imposition of municipal taxes—where the tax is applied broadly to assessed valuations placed on homes and other real property and on incomes and business—hits the ratepayer's pocket most directly.

In view of the wide public interest in municipal taxation, the Dominion Bureau of Statistics published a bulletin giving as complete a picture as is possible of tax levies and taxation receipts of municipalities, classified into cities, towns, and rural municipalities, by provinces, for the years 1913-37.\* The following summary table, taken therefrom, gives figures of tax receipts for these years so far as they are available. Unfortunately, there are certain inconsistencies and omissions, as between provinces, which cannot be overcome owing to the lack of uniformity in the collection of municipal data.

\* See the bulletin "Municipal Tax Levies and Receipts, by Provinces", obtainable from the Dominion Statistician.

<sup>1</sup> Statistics are for Charlottetown only. <sup>2</sup> Cities of Saint John, Moncton, and Fredericton only for 1931-33; for Saint John and Moncton only for 1934 and 1935. <sup>3</sup> Figures not available. <sup>4</sup> The figure shown is for all municipalities except cities. <sup>5</sup> Statistics are not comparable with those for previous years owing to modification of provincial reports. <sup>6</sup> Statistics of taxation receipts covering all municipalities were published for the first time in 1936.

**Municipal Assessments.**—The chief basis of municipal tax revenue is the real estate within the limits of the municipalities; though, as indicated above, in certain provinces personal property, income, and business carried on are also taxed. General taxes are normally assessed at the rate of so many mills on the dollar of the assessed valuations. In the Prairie Provinces, the values of improvements made to real property are often rated at a very low figure, e.g., in Saskatchewan, where the taxable valuations of buildings are about 13 p.c. of the taxable valuations of lands, and in Alberta, where they are about 26 p.c. of the taxable valuations of lands, as shown in Table 35.

There are various reasons for fluctuations in assessment valuations, owing to differences in laws and varying practices with regard to assessment in the various classes of municipalities throughout Canada.\* Lands in the West, valuations for which in earlier years were somewhat inflated, have of late been assessed on a sounder basis, and in some provinces the Equalization Boards have placed a more equitable valuation on lands as among the various rural municipalities.

\* This subject is dealt with more fully in the special report of the Dominion Bureau of Statistics on "Assessment Valuations by Provinces", obtainable from the Dominion Statistician.

## 35.—Total Assessment Valuations of Municipalities, by Provinces, 1933-37.

NOTE.—Corresponding figures for 1927 and 1928 are given at p. 824 of the 1930 Year Book and for 1929-32 at p. 874 of the 1936 Year Book. Data for earlier years are given in previous editions.

1937		7,648,427,488 <sup>11</sup>			8,185,875,159 <sup>11</sup>	

<sup>1</sup> Includes certain taxable valuations not specified. <sup>2</sup> Not available. <sup>3</sup> No assessment in this province. <sup>4</sup> In Nova Scotia personal property and income assessments for cities are for Sydney only. <sup>5</sup> Includes property temporarily exempted. <sup>6</sup> Corporation income only. <sup>7</sup> Cities only. <sup>8</sup> In 1937 figures include \$1,381,988 statutory exemptions for municipal districts not separable. <sup>9</sup> Municipal districts only. <sup>10</sup> Complete totals not available. <sup>11</sup> In interpreting these totals, footnotes to the constituent items should be noted.

**Bonded Indebtedness.**—Like other Canadian governing bodies the municipalities of the greater part of Canada borrowed rather freely during the boom period of 1900-12, and again during the nineteen-twenties. The figures of Table 36 show that there was an increase in 1937 over 1936 in the Provinces of Prince Edward Island, Nova Scotia, and Quebec; the others showed a decrease.

### 36.—Total Bonded Indebtedness of All Classes of Municipalities, by Provinces, 1919-37.

NOTE.—Figures are for gross debenture debt unless otherwise indicated.

<sup>1</sup> In addition there were capital assets amounting to over \$13,000,000 for Halifax and over \$3,000,000 for Sydney. <sup>2</sup> Total receipts are not available; this figure of total tax collections represents by far the major portion of receipts.

<sup>3</sup> Owing to a revision of the system of reporting municipal statistics, incomplete returns only are available for receipts, expenditures, assets, and liabilities.

## Section 4.—National Wealth and Income.

### Subsection 1.—National Wealth.

A general idea of the size and composition of the national wealth is essential for the intelligent consideration of many problems, both national and international, although, in view of the numerous elements of uncertainty in a calculation of this nature, the statistics must be regarded as indicative rather than as strictly accurate; when carefully prepared they hold a very important place in a national statistical system.

There are several methods of computing national wealth, i.e., the aggregate value of the public and private property within the nation apart from undeveloped natural resources. Perhaps the most familiar of these methods is that of working back to capital values through income tax returns, but this can be applied only in countries where small as well as large incomes are assessed for income tax. A second method is that of estimation from probate returns, the value of the estates of deceased persons being regarded as representative. A third is that of a complete census, based upon a canvass of the individual. A fourth method, namely, the so-called 'inventory' method, is often employed.\* The estimate of Canada's wealth herein presented is based on the inventory principle, i.e., an attempt is made to secure for the nation an approximation of the businessman's inventory of his possessions. This method consists in totalling the amounts invested in agriculture, manufacturing, dwellings, etc. It does not include the value of undeveloped natural resources but only natural wealth that has been appropriated.

The first official estimate of national wealth issued by the Dominion Bureau of Statistics was for 1921, being based on the census data of that year. The national wealth was then placed at \$22,195,000,000. Later estimates were \$25,673,000,000 for 1925 and \$27,668,000,000 for 1927. The estimates for 1921, 1925, and 1927 are not exactly comparable with those for 1929 and 1933 given in Table 38, but are sufficiently so for most purposes. The 1929 estimate presents a picture at the peak of

\* An explanation of method and of the background of early estimates of national wealth as applied to Canada will be found in the article "The Wealth of Canada and Other Nations" by R. H. Coats, Dominion Statistician, published in the Journal of the Canadian Bankers' Association, October, 1919.

prosperity, whereas that of 1933 reflects the writing down of values resulting from the depression. The 1933 estimate is the latest that has been published.

**Wealth of Canada by Items, 1929 and 1933.**—In the items showing the composition of the national wealth, as set out in Table 38, care has been taken to exclude all duplication. For instance, the item "Fisheries" includes only capital invested in primary operations. Capital invested in fish-canning and -curing establishments is included with "Manufactures", though this also might be considered as part of the wealth connected with "Fisheries". Similarly, the items for "Manufactures" do not include lands and buildings in urban centres that are shown under the heading "Urban Real Property".\*

\* A fuller explanation of the composition of the separate items is contained in the bulletin "Canada's National Wealth", obtainable from the Dominion Statistician.

### 38.—Estimate of the National Wealth of Canada, with Percentage and Per Capita Distribution of Component Items, 1929 and 1933.

NOTE.—For discussion of these items, see p. 871 of the 1933 Year Book and the bulletin referred to above.

<sup>1</sup> As the statistics for Yukon are uncertain, the per capita estimate of wealth is not shown.

<sup>2</sup> Includes the population of the Northwest Territories: 9,000 in 1929 and 10,000 in 1933, 0.09 p.c. in both cases.

**Analyses of Itemized Wealth, by Provinces, 1929 and 1933.**—Detailed statistics of the wealth of each province by leading items are given at pp. 882-883 of the 1936 Year Book.

### Subsection 2.—National Income.

The subject of the national income is dealt with at pp. 889-896 of the 1938 Year Book, under the following headings: definition of national income, approaches to the measurement of national income, and income tax statistics as a measure of national income. The statistics shown under the last-named heading have been transferred to Subsection 3 of Sect. 1 of this Chapter, where they appear under the general heading of war tax revenue. The subject of national income as a whole and the revision of the method of estimation are still undergoing investigation by the Bureau, as outlined at p. 891 of the 1938 Year Book. Statistics for the years 1933-34, based upon the Survey of Production, are given at p. 866 of the 1937 Year Book. These are the latest figures published on the old basis.

### Subsection 3.—British and Foreign Capital Invested in Canada and Canadian Capital Invested Abroad.\*

Because of the increasing complexity and the great variety of forms investments take and the difficulties inherent in arriving at satisfactory valuations, along with the continual changes in ownership in some cases, these estimates should be considered as approximations rather than exact representations. They are, however, indicative of the general proportions of the investments involved. In using these statistics it should be recognized that changes in value from one year to another do not always reflect actual capital movements between Canada and other countries as there are important changes in the value of 'equity' investments arising from internal operations, such as reinvested profits, for instance, which are quite independent of external factors.

Revised estimates of British and foreign investments in Canada and Canadian investments in other countries were issued in 1938 by the Dominion Bureau of Statistics. Revisions went back to 1926 and revised statistics of international investments will be found for the years 1926 and 1929 to 1937 in tables at p. 930 of the 1939 Year Book. Very marked changes have taken place in Canada's international indebtedness during the present century. The industrial expansion in Canada in the years preceding the War of 1914-18 was related closely to the heavy inflow of capital from Great Britain. In 1914 the value of United Kingdom investments in Canada was not much different from the value shown for recent years, although slightly higher than in 1926. The rapid growth in United States investments in Canada took place after 1914. Part of this increase in the investments of the United States in Canada came after 1926 and there was a change in these investments between 1926 and 1930 of from \$3,161,200,000 to \$4,298,400,000. This influx of capital followed two contrasting channels. A large part of the capital was raised through the sale of new issues at New York but the capital coming to Canada through the channel of direct investment was also especially heavy and this capital invested directly in Canada has given to such United States investments a particular character. Since 1930 there has been a reduction in the value of United States investments in Canada, as a result of the redemption of Canadian securities owned in the United States, changes in the values of equity investments in Canada, and other factors.

In 1937 the indebtedness abroad of Canadian governments amounted to \$1,698,000,000 of which \$514,200,000 represented government securities held by British investors and \$1,180,600,000 government securities held by residents of the United States. The total non-resident investments in Canadian railways, \$1,632,900,000, was about the same as the total government securities held abroad, but the British investments predominated in this group, being \$1,065,600,000 compared with a United States investment of \$538,500,000. In most other classes of investment the amounts owned in the United States were larger than the British although the latter were generally substantial.

In appraising Canada's international indebtedness, consideration must also be given to Canadian investments abroad. These have grown from \$1,352,800,000

\* Revised by Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics. This subject is treated more fully in the bulletins "British and Foreign Capital Invested in Canada and Canadian Capital Invested Abroad, 1926-36", "Canadian Balance of International Payments—A Study of Methods and Results" and recent reports on direct investments, obtainable from the Dominion Statistician. For a list of the publications of this Branch, see Chapter XXIX.

in 1926 to \$1,757,900,000 in 1937. The principal growth was in Canadian portfolio holdings of United States securities although considerable amounts of the securities of Latin American and European governments were also acquired in the earlier part of the period. The increase in the holdings of these miscellaneous investments in other countries has been greater than the increase in total Canadian investments abroad, as there has been a very marked reduction in the net assets of the Canadian banks in other countries during this period.

For 1937, Canadian capital in other countries is estimated at \$1,757,900,000. The largest part of this, about \$1,097,600,000, was invested in the United States and was principally in the form of direct investments in railways and branch and subsidiary plants and in portfolio investments in the stocks and bonds of United States governments and corporations. Investments in other countries include a miscellaneous item of \$382,000,000 representing an estimate of Canadian holdings of other foreign securities such as the bonds of Latin American and European governments. Direct investments in other countries, largely in the British West Indies and Latin America, amounted to \$169,600,000.

Of further interest, in considering the relative importance of Canada's international indebtedness in the nation's economic life, is the place Canadian capital occupies in the total amount of capital invested in Canada. It is estimated that the amount of capital invested in Canada is about \$18,000,000,000. This sum includes the bonded indebtedness of Dominion, provincial, and municipal governments, investments in railways, all manufacturing concerns, mines and metal industries, public utilities, trading establishments, finance, insurance, land, and mortgages. It does not include private capital in domestic enterprises such as farms, homes, etc. Of this sum, it is estimated that 62 p.c., or over \$11,000,000,000, is owned in Canada; about 22 p.c., or \$3,932,400,000, in the United States; 15 p.c., or \$2,684,800,000, in the United Kingdom; and less than 1 p.c., or \$147,800,000, in other countries.

#### **Investments of Canadian Insurance Companies Operating Abroad.—**

Insurance investments, so-called, are not investments of quite the same character as the other items shown in the tables. The large assets in other countries held by Canadian insurance branches in those countries have against them, besides ordinary liabilities, the fiduciary interest of the policyholders. In fact, when the prospective claims of policyholders are considered, it appears that, on balance, there is a small net investment of these branches in Canada rather than a Canadian investment abroad. This is possible because the assets underlying the reserve funds need not all be held abroad. On the other hand, the fact that assets can be transferred between countries gives an importance to them as a factor in capital movements. Again, British and foreign securities held by Canadian companies in Canada have already been included as Canadian investments abroad. On account of the ambiguity of the item "Investments of Canadian Insurance Companies Operating in Other Countries" and the fact that it has already been included in another form, it has not been repeated in the tables.

With regard to British and foreign insurance investments in Canada, since there exist net assets in Canada over all liabilities including reserves against future claims of Canadian policyholders, the residual amount is shown in Table 40 as a bona fide investment in Canada.

**40.—Estimated British and Foreign Capital Invested in Canada as at Dec. 31, 1937.**

NOTE.—Net equities of policyholders, etc., outside of Canada invested in Canada through Canadian insurance companies operating abroad are not shown in this table for the reason given at p. 880. The omission does not materially affect the totals.

## PART I.—CURRENCY AND BANKING.

### Section 1.—Historical Sketch.

At pp. 900-905, inclusive, of the 1938 Year Book there appears a historical sketch of currency and banking in Canada, in which certain features of a central banking system were traced that finally led up to the establishment of the Bank of Canada. In chronological order these were:—

1. *Central Note Issue*, permanently established with the issue of Dominion notes under legislation of 1868.
2. *The Canadian Bankers' Association*, established in 1900, and designed to effect greater co-operation among the banks in the issue of notes, in credit control, and in various aspects of bank activities.
3. *The Central Gold Reserves*, established by the Bank Act of 1913.
4. *Rediscount Facilities*, although originated as a war measure by the Finance Act of 1914, were made a permanent feature of the system by the Finance Act of 1923, which empowered the Minister of Finance to issue Dominion notes to the banks on the deposit by them of approved securities. This legislation provided the banks with a means of increasing their legal tender cash reserves at will.

### Section 2.—The Bank of Canada.

#### Subsection 1.—The Bank of Canada Act and Its Amendments.

C. 43 of the Statutes of 1934, "An Act to incorporate the Bank of Canada", provided for the establishment of a central bank in Canada. The capital of the Bank was originally \$5,000,000, divided into shares of \$50 par value. These shares were offered for public subscription by the Minister of Finance on Sept. 17, 1934, and were

largely oversubscribed. The maximum allotment to any one individual or corporation was 15 shares. Shares of the Bank could be held only by British subjects ordinarily resident in Canada, or by corporations controlled by British subjects ordinarily resident in Canada. The maximum holding permitted one person was 50 shares. The Bank commenced business on Mar. 11, 1935.

By an amendment to the Act, passed at the 1936 session of Parliament, the capitalization of the Bank was increased to \$10,100,000 by the sale of \$5,100,000 Class "B" shares to the Minister of Finance; the original shareholders were designated Class "A".

The Bank of Canada Act was further amended in 1938 (c. 42 of the Statutes of 1938). By this legislation the capital of the Bank was reduced from \$10,100,000 to \$5,000,000 divided into 100,000 shares of the par value of \$50 each to be exchanged for the Class "B" shares held by the Minister of Finance which were to be cancelled by the Bank of Canada. All "A" shares, held by the public, were purchased for the sum of \$59.20 each plus accrued dividends, and these certificates were also cancelled. This legislation, therefore, brought the Bank of Canada under complete government ownership. Owing to changes in constitution and ownership, adjustments were made in the method of appointing directors as well as in other directions.

The Bank is authorized to pay cumulative dividends of  $4\frac{1}{2}$  p.c. per annum from its profits after making such provision as the Board thinks proper for bad and doubtful debts, depreciation in assets, pension funds, and all such matters as are properly provided for by banks. The remainder of the profits will be paid into the Consolidated Revenue Fund of Canada and to the Rest Fund of the Bank in specified proportions until the Rest Fund is equal to the paid-up capital, when all the remaining profits will be paid into the Consolidated Revenue Fund.

The Bank may buy and sell securities of the Dominion and the provinces without restriction if of a maturity not exceeding two years, and in limited amounts if of longer maturity: short-term securities of the Dominion or provinces may be rediscounted. It may also buy and sell short-term securities of British Dominions, the United States, or France without restriction, if maturing within six months, and such securities having a maturity exceeding six months in limited amounts. The Bank may buy and sell certain classes of commercial paper of limited currency, and, if endorsed by a chartered bank, may rediscount such commercial paper. Advances for six-month periods may be made to chartered banks, Quebec Savings Banks, the Dominion, or any province against certain classes of collateral, and advances of specified duration may be made to the Dominion or any province in amounts not exceeding a fixed proportion of such government's revenue. The Bank may accept from the Dominion or Provincial Governments, or from any chartered bank or any bank incorporated under the Quebec Savings Banks' Act, deposits that shall not bear interest. The Bank may buy and sell gold, silver, nickel, and bronze coin, and gold and silver bullion, and may deal in foreign exchange.

The provisions regarding the note issue of the Bank of Canada are dealt with at p. 893.

The Bank of Canada must maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada. The reserve, in addition to gold, may include silver bullion; balances in pounds sterling in the Bank of England, in United States dollars in the Federal Reserve Bank of New York, and in

gold currencies in central banks in gold-standard countries or in the Bank for International Settlements; treasury bills of the United Kingdom or the United States of America having a maturity not exceeding three months; and bills of exchange having a maturity not exceeding 90 days, payable in London or New York, or in a gold-standard country, less any liabilities of the Bank payable in the currency of the United Kingdom, the United States of America, or a gold-standard country.

The chartered banks are required to maintain a reserve of not less than 5 p.c. of their deposit liabilities payable in Canadian dollars in the form of deposits with and notes of the Bank of Canada.

The Bank acts as the fiscal agent of the Dominion of Canada without charge and may, by agreement, act as banker or fiscal agent of any province. The Bank does not accept deposits from individuals and does not compete with the chartered banks in commercial banking fields.

The head office of the Bank is at Ottawa, and it has an agency in each province, namely, at Charlottetown, Halifax, Saint John, Montreal, Toronto, Winnipeg, Regina, Calgary, and Vancouver.

The Governor of the Bank is its chief executive officer and Chairman of the Board of Directors, and he is assisted by a Deputy Governor and an Assistant Deputy Governor. The first appointments were made by the Government. Subsequent appointments are to be made by the Board of Directors subject to the approval of the Governor in Council.

At the first meeting of the shareholders on Jan. 23, 1935, seven directors were elected by the shareholders for terms to run as follows: one until the third annual general meeting (1938), two until the fourth (1939), two until the fifth (1940), and two until the sixth annual general meeting (1941). Directors are now appointed by the Minister of Finance with the approval of the Governor in Council for terms of three years. There are now eleven directors. Former directors continued in office when the Government took over the management of the Bank. In the transaction of the business of the Bank each director has one vote.

There is also an Executive Committee of the Board of Directors consisting of the Governor, Deputy Governor, and one member of the Board, which must meet once a week. This Committee has the same powers as the Board but every decision is submitted to the Board of Directors at its next meeting. The Board must meet at least four times a year. The Deputy Minister of Finance is an ex officio member of the Board of Directors and of the Executive Committee, but is without a vote.

The Governor, or in his absence the Deputy Governor only, has the power to veto any action or decision of the Board of Directors or the Executive Committee, subject to confirmation or disallowance by the Governor in Council.

## **Subsection 2.—The Bank of Canada and Its Relationship to the Canadian Financial System.**

An article under this title is given at pp. 881-885 of the 1937 edition of the Year Book. It deals with such subjects as the functions of the Bank, its control and regulation of credit and currency, the mechanism by which such control is exercised, the expansion and contraction of credit, the mitigation of general economic fluctuations, the control of exchange operations, the advisory function of the Bank, and its duties as the Government's banker.

## Subsection 3.—Bank of Canada Operations.

The operations of the Bank of Canada, as shown by the liabilities and assets statement as at Mar. 13, 1935, and Dec. 31, 1937-39, are shown in Table 1.

<sup>1</sup> From the Bank's Annual Statement.

The chart on p. 886, showing Bank of Canada liabilities and assets covering the short period since June, 1937, illustrates the relationship between the central bank's balance sheet and chartered banks' cash reserves. The expansion of Bank of Canada liabilities and assets has provided for increased Bank of Canada notes in active circulation, as the chartered bank-note issue is limited and is gradually being retired under Bank Act regulations, and has somewhat enlarged the cash reserves of the chartered banks. The principal change in Bank of Canada assets since June, 1937, has been the rise in reserve and investments, variations in the latter having been due, in part, to seasonal variation in cash reserves and active note circulation.

Section 3.—Currency.

Subsection 1.—Canadian Coinage.

The present standard of Canada is gold of 900 millesimal fineness (23·22 grains of pure gold equal to one gold dollar). Under the Uniform Currency Act of 1871, gold coin has been authorized but only very limited issues were ever made. The British sovereign and half sovereign, and United States eagle, half eagle, and double eagle

are legal tender. Subsidiary coin consists of 50-, 25-, and 10-cent silver pieces,\* 800 fine (reduced from 925 fine in 1920). Such subsidiary silver coin is legal tender to the amount of ten dollars. The 5-cent piece (now made of nickel) is legal tender up to five dollars and the 1-cent bronze coin up to twenty-five cents. There is no provision for the redemption of subsidiary coin.

\* The Currency Act of 1910 made provision for a silver dollar and a 5-cent silver coin. The former was not coined until 1935, when a limited issue was made as a jubilee coin. The 5-cent silver coin was coined freely until 1921. It still has limited legal tender but has been replaced in the coinage by the nickel 5-cent piece.

#### THE ROYAL CANADIAN MINT.\*

**History.**—On Jan. 2, 1908, His Excellency the Governor General, Earl Grey, formally opened the Ottawa Branch of the Royal Mint and struck the first coin made in Canada. Previously, all coinages required for Canada had been executed at the Royal Mint, London, or, under its supervision, at the "Mint", Birmingham. Authority for the establishment of the Ottawa Branch of the Royal Mint was the (Imperial) Coinage Act, 1870, and the Ottawa Mint Act passed by the Dominion Parliament in 1901. The work of construction commenced in June, 1905, the Royal Proclamation authorizing the opening of the Ottawa Branch of the Mint was published at Buckingham Palace on Nov. 2, 1907, became effective Jan. 1, 1908, and the Mint was formally opened the next day.

The main purpose of the Ottawa Branch as first constituted was the minting of coins of gold, silver, and bronze for domestic circulation, of British sovereigns and small coins struck under contract for Newfoundland and Jamaica.† Previous to 1911 only small amounts of gold bullion were refined but after that date the increasing amounts of bullion sent to the Mint for refining in the Assay Department soon led to the decision by the Dominion Government to build a refinery. This had actually been begun in 1909, and operations were in active progress by January, 1911, the process being entirely electrolytic. The subsequent great development of the gold-mining industry in Canada has made gold refining one of the principal activities of the Mint. The result was that the refining facilities of the Mint again proved to be entirely inadequate and it was necessary to enlarge the plant. The new equipment installed, designed for the Miller Chlorine Process of refining,

\* Revised by H. E. Ewart, M.E.I.C., Master, Royal Canadian Mint, Ottawa.

† There were three important amendments to the Currency Act of 1910 made during the reign of King George V: the first, in 1919, reducing the size and weight of the bronze cent from one inch to three-quarters inch diameter and from 87½ grains to 50 grains; the second, in 1920, reducing the millesimal fineness of the silver coinage from 925 to 800; and the third, in 1921, giving currency to a five-cent pure nickel coin. The latter coin, first issued in 1922, replaced the silver five-cent piece, which had not been struck after 1920.

The first Canadian silver dollar was struck in 1935 commemorating the twenty-fifth anniversary of the accession of His Late Majesty, King George V.

New reverse designs for all subsidiary coins were instituted at the beginning of King George VI's reign in 1937.

speeded up the process materially and the total refining capacity of the Mint was increased to 1,250,000 ounces of fine gold per annum.

During the War of 1914-18, the Ottawa Mint came to the assistance of the British Government by refining South African gold on account of the Bank of England. This necessitated the erection of a temporary building in the Mint grounds. The building was equipped with an entirely new chlorine plant and, by working several shifts, had a capacity of one million ounces of fine gold per month. During the years 1916-18, over nineteen million ounces of South African crude bullion were refined in this plant. After 1918 the supply of South African gold ceased and the refinery operated at normal working capacity on bullion from Canadian sources only.

On Dec. 1, 1931, the Mint was taken over by the Department of Finance on behalf of the Dominion of Canada and is now known as the Royal Canadian Mint. As the gold production in Canada had increased steadily and had been particularly accelerated by the increase in the price of gold from \$20·671834 until it reached \$35 per fine ounce in 1934, the capacity of the plant was again found inadequate. Therefore, a new refinery with modern machinery was completed late in May, 1936.

**Organization of the Ottawa Mint, 1940.**—As constituted at present, the Ottawa Mint consists of four principal departments:—

1. The Mint Office, in which all bullion is received for coinage purposes and from which the finished coins are issued to various parts of Canada on requisitions received from the Chief of the Currency Division, Bank of Canada, Ottawa.

2. The Operative Department, with its subdivisions: (a) The Melting House in which the bullion is melted with the requisite alloy into coinage bars. (b) The Coining Department, where the coinage bars are rolled into fillets from which the coin blanks are cut, marked, annealed, blanché, cleaned, struck, and tested before delivery to the Mint Office. (c) The Die Department, where the coinage dies are made. (d) The Mechanical Department, where the power is generated and renewals and repairs to all minting machinery effected.

3. The Assay Office, where the fineness of crude bullion, fine ingots, coinage bars, and finished coins is ascertained.

4. The Refinery, where deposits of rough gold bullion are melted and refined, the fine gold and silver contents extracted and cast into bars for coinage or for trade purposes.

Once each year the integrity of the coins turned out by the Mint is checked by three Assay Commissioners nominated by the Governor General in Council under the terms of the Currency Act. During the year, Mint officers set aside one piece, selected at random, from each 'journey' (720 ounces) of silver coin ready for issue. The Assay Commissioners meet once each year and weigh and assay the pieces that have been set aside, in order to determine whether they are within the prescribed limits of weight and fineness, reporting their findings to the Minister of Finance.

**Refining Procedure.**—The deposits of crude gold bullion—known in Mint parlance as 'rough gold'—are received at the refinery receiving-room, weighed by officers from the Mint Office, and each deposit given a serial number; any marks or peculiar features are noted at the time. They are then transferred to the refinery office and again weighed by refinery officers. These deposits may vary in

weight from ingots of 1,500 ounces to a few ounces and may contain from 99·9 p.c. of gold to 20 p.c. of gold, the remainder being silver and base metals (copper, lead, zinc, etc.). Regulations prohibit the acceptance of bullion containing less than 20 p.c. of gold or any deposit containing less than one ounce of gold.

From the receiving office the deposits are transferred to the Rough Gold Melting Room. Each deposit is melted separately and two small dip samples are taken during this process. The molten metal is poured into moulds that shape the ingots. Cuts are taken from these ingots and, along with the dip samples, are sent to the Assay Office for assay. If the assays of the dips and cuts agree within certain limits, the assay is reported and payment made, less the refining charges, for the gold and silver contents calculated on the weight after melting. When concordant assays cannot be obtained, the deposit is remelted and the operation repeated. When the bullion is passed for payment, it becomes the property of the Mint and there is no necessity to retain the separate identity of each deposit. The whole purpose of this process is to obtain the actual weights of gold and silver contained in the deposits and thus determine the amount to be paid the consignor.

The rough gold ingots are then taken to the Gold-Refining or Chlorination Room. The Miller Chlorine Process is based on the fact that chlorine attacks base-metals and silver in preference to gold when passed into a molten mixture of these metals. Chlorine gas is passed into molten crude bullion covered with borax. The chlorine combines with the metals to form chlorides. A large portion of the base-metal chlorides and some silver chloride volatilize and are carried off while the remainder rise to the surface. When all the silver and base metals have been converted into chlorides, the addition of chlorine is stopped before the gold is attacked. The chlorides are bailed off, leaving the refined gold which assays 995·0 and over. The chlorides, which contain a little gold, are melted and some carbonate of soda is scattered on the surface. This reduces a portion of the silver chloride and the metallic silver settles to the bottom carrying the gold with it. The container is allowed to cool below the melting-point of silver and the chlorides, which are still liquid, are poured off, leaving a 'button' of silver which contains all the gold. This bullion is put in with another charge of rough gold and again passes through the chlorination process.

The refined gold, obtained in the foregoing manner, is poured into moulds, each holding 400 ounces. The weight of the fine gold ingots (trade bars) must not be less than 390 and not more than 410 ounces. Small sample bars of about 20 ounces are poured before casting the first ingot and after every tenth ingot. Cuts taken from these sample bars are assayed in the regular manner.

The chlorides remaining after the removal of the gold are treated with nascent chlorine to dissolve the base-metal impurities, the principal one being cuprous chloride. The silver chloride is reduced to metallic silver, washed, and transferred to the silver melting room where it is cast into ingots of 1,000 ounces in the same manner as gold. The liquids drained off during the silver chloride reduction process are treated further to precipitate the copper. This copper is sold as a copper sweep containing a little silver and a trace of gold.

Every possibility of loss of precious metal is guarded against. Slags, discarded crucibles, furnace linings, chamber dust, etc.—known as sweeps—are crushed and any metals extracted. During the process, samples are continually being taken and these are sent to the Assay Office for further sampling and assaying. The sweep is stored in drums until sold to smelters. In addition to this, the fumes from all

furnaces are drawn by a special ventilating system into the "Cottrell Precipitators". The flue gases carry gold, silver, and other metals in suspension. The precipitators, by means of an electrical process, extract the metals in the form of a fine powder, which is collected, sampled, assayed, and sold to smelters.

In 1938, 6,913 deposits were received having a gross weight of 5,601,257 ounces. The rough gold received weighed 4,671,147 ounces, the average assay being: gold, 743.0; silver, 143.8; base metals, 113.2. The number of fine gold trade bars produced was 10,967, weighing 4,420,379 ounces with an average fineness of 996.87. Granulated gold, produced for sale to manufacturing jewellers, etc., had a gross weight 12,395 ounces, with an average fineness of 999.84. The capacity of the refinery is approximately 140,000 ounces of fine gold trade bars per week. A record was kept, some years ago, over a period of nine months, of the recoveries of gold from the refining of rough gold containing 474,000 ounces fine gold. The percentage recoveries were as follows: gold in the form of trade bars, 98.357; gold in silver 'buttons', 1.504; gold in flue dust, slags, etc., 0.135; gold not recovered, 0.004. The output of silver is approximately 20,000 ounces per week.

**Coinage Methods.**—The ingots used for coinage must be of a purity of 999 parts per 1,000, or over. These ingots are placed with the necessary alloys in crucibles and are charged into the melting-furnaces where the metals are thoroughly mixed. The flues of the furnaces are so arranged that the gases issuing from the furnaces enter a large condensing chamber where any fine particles of metal that may be carried from the furnaces are removed from the air before it reaches the chimney stack. When the metal is ready for pouring, it is cast into bars about 24 inches long,  $\frac{1}{2}$  inch thick, and varying in width from  $1\frac{1}{4}$  inches to  $2\frac{1}{4}$  inches according to the denomination of the coin to be made. The bars cast from each crucible are kept separate and marked distinctively, so that their origin can be readily traced at any time. In the case of gold or silver bars, a small piece is cut from one end of the first and of the last bar from each crucible, and these pieces are forwarded to the Assay Office for testing. The bars are not used until a report from that department has been received stating that they are within the legal standard as to fineness. All bars above or below this standard are remelted with the necessary amount of alloy, or fine metal, to bring them to standard.

From the melting-house, the bars go to the rolling-mills where they are rolled into long thin strips or fillets. There are three of these mills: the breaking-down mill, through which the bars pass about twenty times; the thinning mill, through which they pass about ten times; and finally, the finishing mill, where, after being passed through about eight times, the bars are reduced to correct thickness for the coin that is to be made. In the finishing mill, the adjustment of the rolls can be made as fine as 0.0002 inch.

In the case of silver and bronze, the fillets pass from the finishing mill to the blank-cutting machines, but in the case of gold it is found that further adjustment is necessary. This is done by drawing the gold fillets between two steel cylinders that can be adjusted to a space of 0.0001 inch. Blanks are then cut from the fillets and the skeleton of the fillet is sent back for remelting.

The blank coins are then put through a marking machine which puts pressure on the edges, raising them and forming a protection for the impressions that are to be made on the blanks in the coining process. Before coining, however, the metal must be rendered ductile as it has been hardened considerably by the rolling, cutting, and marking processes. This is accomplished by annealing—heating the metal

to redness and suddenly quenching it in water. The blanks are cleaned thoroughly and dried, and are then ready for the coining presses.

The embossing of the blank coin is accomplished by subjecting it to pressure when placed in a collar between dies. The collar is fixed on the plate, or table, of the press; the dies work up and down through the collar. The blanks are placed in the feed tube of the press, and feeding fingers, at each stroke of the press, take a blank from the bottom of the tube and place it upon the bottom die, which is just level with the surface of the table; the bottom die then sinks to the centre of the collar, the blank resting upon it, and the top die, following down, strikes the blow, causing the imprisoned metal to squeeze out and fill all space available. The blank thus takes the impressions of both dies and also any markings placed on the inside of the collar (the milling in the case of ordinary gold and silver coins). The top die then rises and the bottom one follows, forcing the struck piece out of the collar, the feeding fingers advance, pushing the struck piece down the delivery tube at the back of the press and placing another blank on the bottom die. The process is then repeated. A feature of this machine is a device that prevents the dies from striking each other in the event of the fingers failing to carry a piece forward from the feeding tube. A pair of dies will strike an average of 78,000 coins before they become unserviceable but, naturally, if they struck each other they would be rendered useless immediately. The speed of the presses can be controlled so that the number of blows struck per minute can be varied from thirty to one hundred. The battery of six presses can strike an average of 200,000 pieces per day.

The finished coins are forwarded to the examining room to be subjected to various tests. The edges of the coins are examined for flaws and then weighed. The automatic weighing machine, on which are weighed all gold coins and fifty-cent and twenty-five-cent pieces, separates the coins into three boxes, one for those of correct weight and the others for those coins that are too light or too heavy. The ten-cent pieces are weighed against a standard dollar weight, while the five-cent nickel pieces and the one-cent bronze pieces are weighed against an avoirdupois pound.

Coins of correct weight are examined on both sides for imperfections. Those coins not of correct weight, discoloured, 'dumb', or imperfect in any way are destroyed in the defacing machine and remelted. The good coins are delivered to the Mint Office and counted into bags by an automatic machine. The bags are tagged as to denomination, weight, and value of contents, sealed, and placed in the strong-hold ready for use.

**Precautions Observed in Working up Bullion.**—The handling of precious metals in such large quantities at the Mint necessitates the enforcement of certain precautions. Each workman has a locker furnished with a special key and, on arrival in the morning, changes from his street clothes to his working clothes, fastens his locker and deposits the key with the foreman of the room. Each strong-hold where the bullion is kept is fitted with a double combination and time-lock. When the bullion to be worked on is checked out into various rooms, it is weighed on balances carrying up to 3,500 troy ounces and turning to the one-hundredth part of an ounce. Each room is debited with the issue of raw material in the shape of bullion and credited with the amount of finished work turned in. At the close of the day, the floors are swept, the dust burned, and all small particles of bullion are recovered and weighed in. If the accounts then balance, the keys of the lockers are released to the men; if there is a loss, search is made for the missing metal or coin.

**Subsection 2.—Dominion and Bank of Canada Notes.**

**Dominion Notes.**—It is explained in the historical outline referred to at the beginning of this chapter that Dominion notes became established in 1868. The legislation by which the issue was expanded with the growth of the country is given in an explanatory footnote at p. 952 of the 1934-35 Year Book.

Prior to the taking over of the note issue by the Bank of Canada when it opened on Mar. 11, 1935, Dominion notes were issued under any one of three statutory authorities: (1) The Dominion Notes Act (Statutes of 1934, c. 34), which required a gold reserve of 25 p.c. to be held against the first \$120,000,000 of notes issued, and full gold coverage against any issue in excess of \$120,000,000. (2) The Finance Act (R.S.C. 1927, c. 70), Part II of which authorized the Minister of Finance to advance to any chartered bank or to the savings banks of Quebec, Dominion notes to any amount on the pledge of approved securities deposited with the Minister—these advances bore interest and no gold coverage was required to be held on Dominion notes so advanced. (3) C. 4 of the Statutes of 1915, authorizing the Government to issue Dominion notes to the amount of \$26,000,000 without gold coverage, but partly covered by the deposit of \$16,000,000 of railway securities guaranteed by the Dominion Government.

The Dominion note issue was, therefore, partly gold-backed and partly fiduciary. Dominion notes were legal tender and, in normal times when Canada was on the gold standard, they were redeemable in gold.

Dominion notes were of two types, those for the purpose of general circulation, and 'special' notes. The latter were used only by the banks for inter-bank transactions and clearings, or for cash reserves or deposit in the Central Gold Reserves. They were mainly of \$5,000 and \$50,000 denominations. Dominion notes for the purpose of general circulation were of the denominations of 25 cents, \$1, \$2, \$4, \$5, \$50, \$500, and \$1,000, although for a considerable time no \$4 or \$50 notes had been issued. Since the minimum denomination for chartered bank notes was set at \$5, Dominion notes of lower denominations naturally were largely in circulation among the general public, but there was nothing to prevent any of these Dominion notes from being included in the reserves of the banks, and it was provided that at least 40 p.c. of the banks' reserves were to consist of Dominion notes.

**Bank of Canada Notes.**—The Bank of Canada, when it commenced operations, assumed the liability for Dominion notes outstanding, which were replaced in public circulation, and partly replaced as cash reserves, by its own legal-tender notes in denominations of \$1, \$2, \$5, \$10, \$20, \$50, \$100, and \$1,000. Deposits of chartered banks at the Bank of Canada completed the replacement of Dominion notes as cash reserves.

The chartered banks are required under the Bank Act of 1934 to reduce the issue of their own bank notes gradually during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes are thus replacing chartered bank notes as the issue of the latter is reduced.

There has been little change in the circulation of denominations of notes under \$5. In the denominations from \$5 to \$1,000, where Bank of Canada notes have partially replaced chartered bank notes or Dominion notes, there has been a large increase. On the other hand, the special Dominion notes in denominations from \$1,000 to \$50,000, which were used almost exclusively for inter-bank transactions or bank reserves, are no longer in use.

### 5.—Denominations of Dominion or Bank of Canada Notes in Circulation, 1926, 1929, 1932, and 1937-39.

NOTE.—Annual averages of month-end figures. The totals outstanding are not always multiples of the denominations of notes, because of adjustments made according to scale when parts of mutilated notes are turned in for cancellation.

### Subsection 3.—Chartered Bank Notes.

The developments by which bank notes became the chief circulating medium in Canada in the period preceding the establishment of the Bank of Canada are described in the historical outline referred to at the beginning of this chapter. The main steps of this development which remained as permanent features of the system are assembled and emphasized here. By the Bank Act of 1870 (later consolidated with the general Bank Act of 1871), the note issue of a bank was not to exceed its paid-up capital, no bank notes were to be issued under \$4 in value (later changed to \$5 and multiples thereof), and, while the banks were allowed to use their own discretion regarding the amount of their cash reserves, it was stipulated that at least one-third (later increased to 40 p.c.) of such cash reserves as they chose to carry should consist of Dominion notes. In the revision of 1880, a note-holder was definitely recognized as a preferred creditor. The Bank Act of 1890 provided for the Bank Note Circulation Redemption Fund, made up by each bank depositing with the Minister of Finance an amount equal to 5 p.c. of its note circulation. As a result of the operation of this fund and of making notes a prior lien against the assets of failed banks, no bank-note holder in Canada has suffered a loss since 1881. In 1908, after the financial crisis of 1907, provision was made for the banks to issue, during the crop-moving season, (October to January inclusive—later extended to September to February inclusive), an excess circulation up to 15 p.c. of their combined capital and 'rest' or reserve funds, such excess to be taxed at a rate not exceeding 5 p.c. per annum. The revision of the Bank Act in 1913 provided for the establishment of Central Gold Reserves in which banks might deposit gold or Dominion notes

and issue additional notes of their own there-against. The Finance Act (c. 3) of 1914, gave the Minister of Finance authority to issue Dominion notes to the banks against approved securities deposited with him. Originally passed as a war measure, this was made a permanent feature of the system by the Finance Act (c. 48) of 1923, and provided the banks with the means of further expanding their note issue by the deposit of the Dominion notes, so obtained, in the Central Gold Reserves.

Bank notes, although the chief circulating medium in the hands of the public, were a fiduciary issue; they were not legal tender but were convertible into Dominion notes which were legal tender.

The provisions regarding bank notes were materially changed with the establishment of the Bank of Canada under the Bank Act (c. 24) of 1934. The authority both for seasonal expansion and for additional issue secured by deposit in the Central Gold Reserves was then terminated. Provision was made for a gradual reduction in bank-note circulation over a period of years as explained at p. 893. As a result of these changes, current data on bank-note circulation are not comparable with those of earlier years. However, statistics of total notes in the hands of the general public are comparable. This public circulation includes chartered bank notes together with Dominion notes and Bank of Canada notes, exclusive of those held by the banks as reserves. Statistics on this basis are shown in Table 6.

#### 6.—Annual Averages of Note Circulation in the Hands of the Public, 1926-39.

NOTE.—Averages of month-end figures have been revised since the publication of the 1939 Year Book.

## Section 4.—Monetary Reserves.

### Subsection 1.—Bank of Canada Reserves.

The composition of Canadian Gold Reserves held by the Government is presented in the 1936 edition of the Year Book, for the years 1905 to 1934, at p. 895. Since March, 1935, the gold reserves have been held by the Bank of Canada. By authority of the Exchange Fund Act (c. 60, 1935), effective in July, 1935, they are valued at the prevailing current market price of gold. The effect of the revaluation as from the above date is shown in the chart at p. 886. The new data are now to be found under the item "Reserves" on the "Assets" section of Table 1, p. 885.

### Subsection 2.—Chartered Bank Canadian Cash Reserves.

**Before the Establishment of the Bank of Canada.**—Up to March, 1935, legal tender cash reserves in Canada were made up partly of Dominion notes (see p. 893); and partly of gold coin and bullion, and subsidiary coin, including these forms of cash held by the banks themselves; and as deposits in the Central Gold Reserves. In so far as these reserves were in actual gold or were in Dominion notes backed by gold, they were subject to the expanding or contracting influences of monetary gold imports or exports arising from Canada's balance of international payments, so long as Canada was on the gold standard.

**Since the Establishment of the Bank of Canada.**—When the Bank of Canada was established, the chartered banks turned over their reserves of gold in Canada and Dominion notes to the new bank in exchange for deposits with and notes of the Bank of Canada. It was provided that henceforth the chartered banks were to carry reserves in these forms amounting to at least 5 p.c. of their deposit liabilities in Canada. Since that time, therefore, the gold reserves against currency and bank credit have been in the custody of the central bank.

The cash reserves shown in Table 7 include, prior to Mar. 11, 1935, the gold and coin and Dominion notes held by the banks in Canada and the deposits in the Central Gold Reserves not ear-marked against the issue of bank notes, and, since the above date, notes of and deposits with the Bank of Canada.

### 7.—Annual Averages of Cash Reserves of the Chartered Banks in Canada, 1926-39.

## Section 5.—Commercial Banking.

### Subsection 1.—Historical.

Since one of the chief functions of the early banks in Canada was to issue notes to provide a convenient currency or circulating medium, it has been expedient to cover both currency and banking in the one historical sketch which is given at pp. 901-905 of the 1938 Year Book. However, the function of note issue is no longer as important as it was. Latterly, the services of the chartered banks in gathering deposits from innumerable sources have emphasized the importance of deposit banking by which the savings of the people are put to immediate productive and commercial use; with the development of commercial banking, other necessary commercial banking facilities have been given more importance. Included among these is the mechanism of bills of exchange by which foreign trade is financed. The principal features of this development of commercial banking facilities in the evolution of the Canadian banking system may be summarized as follows: (1) its origin, closely related to the Montreal produce and export trade, and to the commerce of Halifax and Saint John; (2) the development of the branch bank system in order to meet the demands of a rapidly moving frontier of settlement; (3) the

adaptation to the requirements of the grain and cattle trade of the West; and (4) the consolidation during later years of the features that tended towards its early success. The development of a stable system has been accompanied by failures, particularly marked about the middle of the 19th century, but progress has nevertheless been steady and based on sound principles.

The branch bank is perhaps the most distinctive feature of the Canadian system as it exists to-day, and for a country such as Canada, vast in area and with a small population, the plan has proved a good one. A result of the growth of branch banks was the development of a partly centralized system — centralized as to banks, of which there are now ten, rather than as to districts as in the partly centralized system of the United States. There were 28 chartered banks in existence at Confederation. The elimination of weaker banks or their amalgamation with more stable institutions has been a progressive move towards greater security and confidence. The banks at Confederation were as follows:—

## ONTARIO AND QUEBEC.

Bank of Montreal.  
Quebec Bank.  
Commercial Bank of Canada.  
City Bank.  
Gore Bank.  
Bank of British North America.  
Banque du Peuple.  
Niagara District Bank.  
Molson's Bank.  
Bank of Toronto.  
Ontario Bank.  
Eastern Townships Bank.  
Banque Nationale.  
Banque Jacques-Cartier.  
Merchants' Bank of Canada.  
Royal Canadian Bank.

Union Bank of Lower Canada.  
Mechanics' Bank.  
Canadian Bank of Commerce.

## NOVA SCOTIA.

Bank of Yarmouth.  
Merchants' Bank of Halifax.  
People's Bank of Halifax.  
Union Bank of Halifax.  
Bank of Nova Scotia.

## NEW BRUNSWICK.

Bank of New Brunswick.  
Commercial Bank of New Brunswick.  
St. Stephen's Bank.  
People's Bank of New Brunswick.

A table at pp. 894-895 of the 1937 Year Book shows the insolvencies since Confederation; there have been no further changes reported.

**8.—Bank Absorptions in Canada since 1867.**

NOTE.—The purchasing banks named in that part of the table at p. 898 are no longer in business.

Purchasing Bank.	Bank Absorbed.	Date. <sup>1</sup>

## Subsection 2.—Combined Statistics of Chartered Banks.

In order to afford a clear view of the nature of banking transactions in Canada bank liabilities have been classified in Table 9 in two main groups: liabilities to shareholders and liabilities to the public. Only the latter group is ordinarily considered when determining the financial position of any such institution. Assets are divided into four groups, 'other assets' being included in the total. As of interest to students of banking practice, the relative rates of increase of capital and reserve funds may be noted, also the great increase in the proportion of liabilities to the public to total liabilities, and the gradually increasing percentage of liabilities to the public to total assets. The accompanying chart of ownership division of total assets is of interest in this connection. The declining proportion of notes in circulation to total liabilities to the public is also characteristic of the evolution of banking in recent times. Holdings of Dominion and Provincial Government and municipal securities were relatively insignificant prior to the War of 1914-18.

## 9.—Development of Chartered Banking Business in Canada, 1867-1939.

NOTE.—These statistics are yearly averages computed from the twelve monthly returns. Dashes indicate that no information is available under the corresponding column heads for years so indicated. Figures for intermediate years not shown between 1867 and 1880 will be found at pp. 918-919 of the 1938 Year Book.

**Clearing-House Transactions.**—In advanced industrial societies money is only 'the small change of commerce'. The great bulk of monetary transfers, particularly in the case of the larger transactions, is made through the banks. It has been estimated that about 6 p.c. of the business transactions of the Continent of North America are financed by the use of money and the remaining 94 p.c. by the use of cheques. Accordingly, if the aggregate amount of the cheques paid through the banks and charged to accounts is known, there is an almost complete record of the volume of business transacted, and thus of the business activity of the country.

Statistics of this character were at first secured through the operation of the clearing houses—places where the representatives of all the banks met daily in the leading cities and presented for payment the notes of other banks and the cheques drawn upon other banks that had been paid in to their institutions in the regular course of business. In Canada, the first clearing houses to be established were those of Halifax (1887), Montreal (1889), Toronto (1891), Hamilton (1891), and Winnipeg (1893); the number has subsequently increased to 32.

For the purpose of the Central Clearing Settlement, each bank maintains in its account with the Bank of Canada, Ottawa, a balance (in excess of whatever deposit is maintained as part of the 5 p.c. reserve against deposit liabilities in Canada required by statute) deemed sufficient to settle its clearing obligations. Montreal, Ottawa, Toronto, Winnipeg, and Vancouver are settlement points for the clearing houses in their respective zones. The debit or credit balances of the banks at the specified points are daily communicated by the clearing-house manager, and confirmed by the respective bank, to the local agent of the Bank of Canada (to the Bank of Canada in the case of Ottawa) for transmission to the Bank of Canada at Ottawa by telephone or telegraph, which bank on the same day debits or credits, as the case may be, the account of the respective bank maintained with the Bank of Canada. By this means practically all the banking transactions of the country are adjusted daily in Ottawa in the accounts maintained by the banks with the Bank of Canada.

The figures of Table 15, represent not only actual city clearings but exchanges between numerous rural branches in each district.

**Bank Debits.**—As the number of separate banks has in recent years been steadily diminishing through amalgamations (see pp. 896-898), there being only 10 in December, 1939,\* as compared with 18 in 1923, inter-bank transactions are a steadily decreasing proportion of total business transacted, and bank clearings have ceased to be a satisfactory measure of general business. The Canadian Bankers' Association agreed to secure from January, 1924, the monthly aggregate figures of the amount of cheques charged to accounts at all banking offices situated in the clearing-house centres of Canada, and monthly and annual figures of cheques charged to accounts (bank debits) have been published since that time by the Dominion Bureau of Statistics. Further, in order that an estimate might be made of the proportion of banking transactions outside the clearing-house cities to the total, the Canadian Bankers' Association secured for the month of January, 1935, the grand total of all cheques charged to accounts at all branch banks throughout the Dominion. The results were published in the Bureau's Monthly Review of Bank Debits for February, 1935, and showed that in January, 1935, the aggregate of transactions outside the clearing-house cities was  $12\frac{1}{2}$  p.c. of the grand total in the clearing-house cities. The corresponding figures in the five economic areas were as follows: Maritime Provinces 104.2 p.c.; Quebec 6.9 p.c.; Ontario 13.5 p.c.; Prairie Provinces 8.4 p.c.; British Columbia 16.7 p.c. Only in the Maritime Provinces did the total of bank debits in clearing-house cities appear to represent inadequately the grand total of business transactions.

\* Barclays Bank, established in 1929, was the latest addition to the commercial chartered banks in Canada; the number has remained at 10 since 1931.

## Subsection 3.—Statistics of Individual Chartered Banks.

**Assets and Liabilities.**—The statistics in column 2 of Table 17 represent, for the years 1935 (when the Bank of Canada was established) and 1937 to 1939, the total of Bank of Canada notes in the possession of the chartered banks together with their deposits at the Bank of Canada. For 1929 (before the establishment of the Bank of Canada) they represent the totals of the banks' holdings of gold and coin in Canada, Dominion notes, and that part of their deposits in the Central Gold Reserves not required against their note issues.

### 17.—Principal and Total Assets of Individual Chartered Banks, 1929, 1935, and 1937-39.

NOTE.—The statistics in this table are averages computed from the twelve monthly returns in each year.

commenced business in September, 1929. The grand totals for 1929 are, however, twelve-month averages for all banks.

<sup>2</sup> Four-month averages; bank

**Earnings of Canadian Banks.**—The chartered banks of Canada are for the most part Dominion-wide institutions, doing business in all parts of the country. Their earnings, therefore, reflect with very considerable accuracy the fluctuations of general business.

**19.—Net Profits of Canadian Banks and Rates of Dividend Paid, for Their Business Years Ended 1934-39.**

NOTE.—These figures are not strictly comparable owing to variations from year to year in the practices of individual banks and between banks. With the exception of La Banque Provinciale du Canada, the profits for 1936, 1937, 1938, and 1939 are shown after deducting Dominion and Provincial Government taxes.

<sup>1</sup> This bank paid at the rate of 10 p.c. per annum for the first half-year and 8 p.c. for the second.  
<sup>2</sup> Not reported. <sup>3</sup> Ten months.

**Branches of Chartered Banks.**—During the period from 1881 to 1901, the number of chartered banks doing business in Canada under the Bank Act remained almost the same (36 in 1881 and 1891, and 34 in 1901), but during the present century there has been in banking, as in industry, an era of amalgamations, the number of banks having dropped to 25 in 1913 and to 10 in 1931. That this has been far from involving a curtailment of banking facilities is seen in Table 9, which shows the development of the banking business since 1867, and in Table 20, which compares the number of branch banks existing in Canada at different periods, and shows a growth from 123 at Confederation to 4,083, inclusive of sub-agencies, at Dec. 31, 1930. Since then, owing to the shrinkage in commercial activities as a result of the depression, some unprofitable branches have been closed and the total has declined to 3,319, exclusive of 140 branches and agencies in other countries, as at Dec. 31, 1939.

## Section 6.—Government and Other Savings Banks.

In a comparatively new country where capital is relatively scarce, it is natural that the banks that finance the business institutions should also absorb the bulk of the people's savings for use in promoting the business of the country. Thus, in Canada the great bulk of the current savings of the people is found in the savings or notice deposits of the Canadian chartered banks, the annual average figures of which are given for recent years in Table 9 of this chapter, the 1939 average being \$1,699,224,304. Further, the current savings of the Canadian people are going very largely into the purchase of life insurance, the total premiums paid in the single year 1938 aggregating \$205,290,819. In comparison with the enormous figures of notice deposits in chartered banks and with total insurance in force, the deposits in the special savings banks are comparatively small, but are none the less significant.

There are three distinct types of savings bank in Canada at the present time, in addition to the savings departments of the chartered banks and of trust and loan companies. First, there is the Post Office Savings Bank, in which the deposits are a direct obligation of the Dominion Government. Secondly, there are Provincial Government savings banking institutions in Ontario and in Alberta, where the depositor becomes a direct creditor of the Province. Thirdly, there are, in the Province of Quebec, two important savings banks, the Montreal City and District Savings Bank and the Caisse d'Economie de Notre-Dame de Québec, established under Dominion legislation and making monthly reports to the Department of Finance.

**Dominion Government Savings Banks.**—Prior to 1929 there were two classes of Dominion Government savings banks in Canada, the Post Office Savings Bank under the Post Office Department, and the Dominion Government Savings Bank attached to the Department of Finance. The former was established under the Post Office Act of 1867 (31 Vict., c. 10) in order to "enlarge the facilities now

available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the Dominion to every depositor for repayment of all money deposited by him together with the interest due thereon". Branches of the Government Savings Bank proper, under the authority of the Finance Department, were established in the leading cities of Canada under the management of the Assistant Receivers General and in other places, in the Provinces of Nova Scotia and New Brunswick, under managers appointed by the Governor in Council. From deposits of \$1,483,219 at June 30, 1868, increases were registered until 1887, \$21,334,525 being shown at the credit of depositors at June 30 of that year. Commencing about 50 years ago, the individual banks were gradually amalgamated with the Post Office Savings Bank, and at Mar. 31, 1928, deposits had fallen to \$7,640,566. The remaining banks finally were amalgamated with those of the Post Office in March, 1929.

### 23.—Deposits with Post Office and Dominion Government Savings Banks, Fiscal Years 1918-39.

NOTE.—Figures for Provincial Government savings banks are not included. Figures for 1868-1917 will be found at pp. 833-834 of the 1926 Year Book. The Dominion Government Savings Bank was amalgamated with the Post Office Savings Bank in 1929.

<sup>1</sup> Revised since the publication of the 1939 Year Book.

**Provincial Government Savings Banks.**—Institutions for the deposit of savings are operated by the Provincial Governments of Ontario and Alberta, while a similar institution was in operation in Manitoba from 1924 to 1932 when the depositors' accounts were taken over by the chartered banks.

*Ontario.*—In the session of 1921, the Legislature of Ontario authorized the establishment of the Province of Ontario Savings Office, and in March, 1922, the first branches were opened. Interest at the rate of 1 and  $1\frac{1}{2}$  p.c. per annum compounded half-yearly is paid on accounts. The deposits are repayable on demand. Total deposits on Jan. 31, 1940, were \$39,850,000, and the number of depositors at that date was approximately 114,000. Twenty-six branches are in operation throughout the Province.

*Alberta.*—In Alberta the Provincial Treasury receives savings deposits and issues demand savings certificates bearing interest at 2 p.c., or term certificates for one, two, or three years, in denominations of \$25 and upwards, bearing interest at 2 p.c. for one year and  $2\frac{1}{4}$  p.c. for two or three years. The total amount in savings certificates on Dec. 31, 1939, was \$5,597,931, made up of \$3,474,337 in demand certificates and \$2,123,594 in term certificates.

**Penny Banks.**—Provision is made by the Penny Bank Act (R.S.C., 1927, c. 13) for the institution of banks designed to encourage small savings by school children, although their facilities are not confined to children. Such banks are not deemed to be banks within the meaning of the Bank Act, but are savings banks within the meaning of the Winding Up Act and their powers are strictly limited.

The only bank operating under this Statute is the Penny Bank of Ontario.

ASSETS AND LIABILITIES OF THE PENNY BANK OF ONTARIO, YEARS ENDED

<sup>1</sup> Totals include minor unspecified items.

For many years the Penny Bank of Ontario has been paid a grant by the Ontario Government on the requisition of the Department of Education; the grant paid during the fiscal year 1939 was \$5,000. As at June 30, 1939, the Penny Bank of Ontario served a school population of 208,000 children in 522 schools. R.S.O.,

c. 357, Sect. 89-Y, the Public Schools Act, and c. 360, Sect. 25-B, the High Schools Act, state that the Board of Trustees may provide books, stationery, and other materials necessary in connection with the establishment and maintenance of a penny savings bank or any system introduced for the encouragement of thrift and the habit of saving.

**Other Savings Banks.**—The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871, had on Mar. 31, 1940, a paid-up capital and reserve of \$5,000,000, savings deposits of \$66,306,745, and total liabilities of \$67,872,412. Total assets amounted to \$72,994,651 including nearly \$56,000,000 of Dominion, provincial, and municipal securities. The Caisse d'Economie de Notre-Dame de Québec, founded in 1848 under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855, and given a Dominion charter by 34 Vict., c. 7, had on Dec. 31, 1939, savings deposits of \$13,532,218, a paid-up capital and reserve of \$3,000,000, and total assets of \$17,069,847.

Les Caisse Populaires or People's Banks of Quebec (338 reported to the Provincial Government in 1938) are also an important element in promoting thrift and assisting business in that Province although they are in reality co-operative credit loaning agencies and not banks. On Dec. 31, 1938, savings deposits in these agencies amounted to \$12,103,888, while the amount on loan was \$13,035,610. Loans granted in 1938 numbered 23,586 amounting to \$5,771,429. Profits realized amounted to \$624,263. Further information regarding them will be found at p. 797 of this volume.

## PART II.—MISCELLANEOUS COMMERCIAL FINANCE.

### Section 1.—Loan and Trust Companies.\*

The Canada Year Book, 1934-35, presents at p. 993 an outline of the development of loan and trust companies in Canada from 1844 to 1913.

The laws relating to loan and trust companies were revised by the Loan and Trust Companies Acts of 1914 (4-5 Geo. V, cc. 40 and 55), with the result that the statistics of provincially incorporated loan and trust companies ceased to be collected. However, certain summary statistics of provincial companies have been supplied for 1938 by courtesy of those companies and are included in Table 1 in order to complete the picture for loan and trust companies throughout Canada. It is estimated that more than 90 p.c. of the business of provincial companies is represented in the figures, so that they may be accepted as fairly inclusive and representative of the volume of business transacted as compared with Dominion registered companies. The statistics of Tables 2 and 3 refer only to those companies operating under Dominion charter, except that, beginning in 1925, the statistics of loan companies and trust companies incorporated by the Province of Nova Scotia, and brought by the laws of that Province under the examination of the Dominion Department of Insurance, have been included in Table 3 as well as those for trust companies in New Brunswick since 1934 and in Manitoba for 1938. These historical series start with the year 1920, at which time the Dominion Department of Insurance took over the administration of the legislation concerning Dominion loan and trust companies—the Department of Finance had previously exercised supervision of their activities.

As indicating the progress of the aggregate of loan company business in Canada, it may be stated that the book value of the assets of all loan companies rose from \$188,637,298 in 1922 to \$213,649,794 in 1931, but declined to \$193,677,487 in 1938. The assets of trust companies (not including estates, trust, and agency funds, which cannot be regarded as assets in the same sense as company and guaranteed funds) increased from \$154,202,165 in 1928 to \$233,521,151 in 1938. In the former year, the total of estates, trust, and agency funds administered amounted to \$1,077,953,643 and in the latter year to \$2,582,791,675. (Table 1.)

**Functions of Loan Companies.**—The principal function of loan companies is the lending of funds on first mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings department deposits. Of the loan companies operating under provincial charters, the majority conduct loan, savings, and mortgage business, generally in the more prosperous farming communities.

**Functions of Trust Companies.**—Trust companies act as executors, trustees, and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents or attorneys in the management of the estates of the

---

\* Revised under the direction of G. D. Finlayson, Superintendent of Insurance, Department of Insurance.

living, as guardians of minor or incapable persons, as financial agents for municipalities and companies and, where so appointed, as authorized trustees in bankruptcy. Some companies receive deposits, but the lending of actual trust funds is restricted by law.

**Statistics of Loan and Trust Companies.**—The figures of Table 1 are of particular interest in the case of trust companies, on account of the nature of their functions, they are mainly provincial institutions, their chief duties being intimately connected with the matter of probate, which lies within the sole jurisdiction of the provinces.

## Section 2.—Small Loans Companies.

There have been incorporated in recent years, by the Parliament of Canada, a number of companies that make small loans, usually not exceeding five hundred dollars each, on the promissory notes of the borrowers and additionally secured in most cases by endorsements or chattel mortgages. While small loans companies may, under their charter powers, make loans on the security of real estate, actually they have made but very few of such loans.

### Section 3.—Sales of Canadian Bonds.

The total sales of Canadian bonds naturally reached a very high mark toward the close of the War of 1914-18, owing to the Dominion Government financing required to cover the war expenditures. However, the total sales were greater in 1936 than in any other year, owing largely to Dominion Government conversion loans.

Dominion Government financing through bond sales since 1907 may be divided into three periods: the first from 1908 to 1914, when the money was required largely for internal development of the country, public works, and Government railways; the second from 1915 to 1919, when war expenditures required very large borrowings; and the third since the War of 1914-18, when the issues have been required largely for refunding former loans at lower interest rates and for expenditures in connection with public works and railways. For index numbers of Dominion of Canada long-term bond yields, by months, for 1932 to May, 1940 see p. 825.

Provincial bond issues have been on a much larger scale since the War of 1914-18 than formerly, probably because of the development of provincially owned public utilities and of improved highways. Sales of the bonds of Canadian municipalities, on the other hand, were greater in 1913, toward the end of the 'land boom', than they have been in any other year, although sales in 1930 almost reached the record. However, apart from considerations of the increased urbanization of the population there has not been the same marked increase in the average annual sales of municipal bonds in the period since the War of 1914-18, as compared with the period before the War, that is noticeable in the case of provincial bonds.

Sales of corporation bonds, which from 1926 to 1930 had averaged over \$257,000,000 per year, dropped to \$10,550,000 in 1932 and to \$4,385,000 in 1933, this being due largely to the uncertainty of the industrial outlook. Railway bonds also showed a precipitate decline to \$12,500,000 in 1932 and fell to \$1,000,000 in 1933. A change in the method of accounting between the Dominion and the Canadian National Railways partly accounts for the apparent decrease since 1936.

A very striking change has taken place during the present century in the market in which Canadian bond issues are principally sold. Prior to the War of 1914-18, a great part of the capital required for Canadian development came from the United Kingdom, and the major portion of Canadian bond issues was sold there. The outbreak of war temporarily eliminated that market, and Canadians turned largely to the United States for outside capital. However, the great increase in wealth during and since the War of 1914-18 has enabled a much greater proportion of public and industrial financing to be done at home, and, beginning with the Victory Loan campaigns, Canadians not only learned how to invest their money in bonds, but had the necessary funds to invest on a large scale in bond issues. In 1939, 90.7 p.c. of all bonds issued were sold in Canada, and 8.8 p.c. in the United States.

#### 6.—Sales of Canadian Bonds, by Class of Bond and Country of Sale, 1926-39.

### Section 4.—Corporation Dividends.

Although the 1939 estimate of total dividends paid by Canadian companies was \$23,910,000 below that of 1938, it was the third highest annual amount disbursed by Canadian corporations and was over double that of 1933, the lowest year of the depression in this respect. Mining companies accounted for \$94,100,000 or 31.1 p.c. of the total disbursements for the year.

## Section 5.—Foreign Exchange.\*

The Canadian dollar, adopted as Canada's currency in 1857, was equivalent to 15/73 of the pound sterling; in other words, the pound was equal to \$4.866 in Canadian currency at par, and remained so, with minor variations between the import and export gold points representing the cost of shipping gold in either direction, until the outbreak of the War of 1914-18. During the first eleven years after Confederation, the Canadian dollar was at a premium in the United States, as the United States dollar was not, after the Civil War, redeemable in gold until 1878. From the latter date, the dollar in the two countries was equivalent at par, and variation was only between the import and export gold points or under \$2 per \$1,000.

At the outbreak of the War of 1914-18, both the pound sterling and the Canadian dollar were removed from the gold standard and fell to a discount in New York, though this discount was 'pegged' or kept at a moderate percentage by sales of United States securities previously held in the United Kingdom, by borrowing in the United States, and, after the United States entered the War, by arrangement with the United States Government. After the War, when the exchanges were 'unpegged' about November, 1920, the British pound went as low as \$3.18 and the Canadian dollar as low as 82 cents in New York. In the course of the next year or two, exchange returned practically to par, and the United Kingdom resumed gold payments in April, 1925, and Canada on July 1, 1926. From then until 1928 the exchanges were within the gold points, but in 1929 the Canadian dollar again fell to a moderate discount in New York. The dislocation of exchange persisted, with the exception of a few months in the latter half of 1930, into 1931. Dollar rates were below the gold export points, however, only for a few scattered intervals.

**Recent Movements in Canadian Exchange.**—In September, 1931, the equilibrium of the international exchange was seriously disturbed. This unfortunate turn of events followed a period of over six years during which the nations of the world had worked steadily towards the stabilization of their currency systems upon a gold basis. Within two months of the time when the United Kingdom found it necessary to suspend free gold shipments, however, only a very small number of countries, including the United States and France, were left with currencies unshaken by preceding abnormal gold movements. The decision of the United Kingdom to go off the gold standard (Sept. 21, 1931) resulted in a sharp depreciation of sterling in New York. Canadian rates depreciated also, and fluctuated broadly with sterling until the United States dollar dropped from the ranks of gold standard currencies on Apr. 19, 1933.

Since that time major adjustments have occurred in practically all currencies of the world. The United States dollar was replaced on a gold basis, but was devalued at 59.06 p.c. of its former gold parity ( $13\frac{5}{7}$  grains or  $\frac{1}{8}$  oz. of gold to the dollar as against 23.22 grains previously) on Jan. 31, 1934, with other countries following suit at irregular intervals until the final break-up of the European gold 'bloc' in September, 1936. These countries, including France, Belgium, and Switzerland, were the last to abandon post-War gold standards established between 1925 and 1927. During 1936, the United States dollar and the Canadian dollar fluctuated narrowly about par, while the pound sterling declined in the latter half of the year

\* Revised by Herbert Marshall, B.A., F.S.S., Chief, Internal Trade Branch, Dominion Bureau of Statistics.

until it also approached its old New York and Montreal parity of \$4.866. With the exception of the last three months of the year, when readjustments within the former gold bloc were occurring, 1936 exchange fluctuations were unusually narrow. This was broadly true also for 1937, although there were considerable declines in the French franc, Spanish peseta, and Brazilian milreis.

On May 5, 1938, the French franc was devalued to a minimum rate of 179 francs to the pound sterling; the pound itself dropped sharply during the year from an average of \$5.00 in January to \$4.71 in December. The Canadian dollar remained at fractional discounts in New York from March to December.

Foreign exchange trading, outside of the United States, was subject to a marked increase in official control in 1939. Soon after the outbreak of hostilities in September, belligerents took action to safeguard the positions of their currencies and foreign exchange reserves. However, both sterling and the Canadian dollar were depreciated materially in September as may be observed from Table 8.

## CHAPTER XXIII.—INSURANCE.\*

### CONSPECTUS.

	PAGE.		PAGE.
SECTION 1. FIRE INSURANCE.....	927	SECTION 4. INSURANCE AS IT AFFECTS THE BALANCE OF INTERNATIONAL	
SECTION 2. LIFE INSURANCE.....	936	PAYMENTS.....	952
SECTION 3. MISCELLANEOUS INSURANCE..	943	SECTION 5. GOVERNMENT ANNUITIES....	954

Insurance business is transacted in Canada by companies of the following classes: (1) companies incorporated under the laws of the Dominion of Canada or of the former "Province of Canada", (2) companies incorporated under the laws of the provinces of Canada, and (3) companies incorporated or formed under the laws of British and foreign countries. The word "companies", as here used, includes fraternal benefit societies and exchanges that transact the business of insurance. The Dominion Insurance Acts provide that companies of classes (1) and (3) above may not transact business anywhere in Canada unless registered† by the Dominion, but these Acts also provide that fire insurance on property in Canada may be effected in companies of class (3) even though not registered, if the insurance is effected without solicitation, advertising, or the use of the mails; and if an office is not maintained in Canada, though property to be insured may be inspected and losses may be adjusted. Insurance so effected is generally known as 'unlicensed insurance'. Companies of class (2) may transact business in the province of incorporation, subject to compliance with the laws thereof, or in any other province subject to compliance with the laws thereof, or, on compliance with the Dominion laws, may be granted Dominion registration. Most of these companies limit their business to the province of incorporation or to one or more other provinces; a few only have been granted Dominion registration.

What has been said above implies that jurisdiction concerning insurance companies and insurance business is divided between the Dominion and the provinces. There have been many references to the courts and appeals to the Privy Council with a view to determining the respective legislative domains, both in respect of insurance legislation specifically and in respect of legislation affecting companies generally, including insurance companies. The latest Privy Council decision was handed down in 1931. It may now be taken as established that the Parliament of Canada may require companies formed or incorporated outside of Canada to obtain Dominion registration and to continue to be so registered as a condition of transacting business in Canada, and these companies may be required to make returns from time to time of their business and doings in Canada and to furnish evidence of their solvency. The powers of the Dominion go much further in reference to

\* The statistics of Fire, Life, and Miscellaneous Insurance have been revised under the direction of G. D. Finlayson, Superintendent of Insurance, and those pertaining to Government Annuities (Section 5) under the direction of W. M. Dickson, Deputy Minister of Labour.

† Prior to 1932, the Dominion Insurance Acts provided for the "licensing" of companies; the Acts passed in 1932 provided for "registration". The change in terminology does not indicate any change in substance.

companies incorporated by the Parliament of Canada, but include all of the powers that may be exercised over companies formed or incorporated outside of Canada and registered by the Dominion. The Acts passed in 1932,\* as since amended, implement the powers of the Dominion as determined by the Privy Council decisions.

The Dominion Acts under which companies are registered are administered by the Department of Insurance under the Minister of Finance. The chief officer of the Department of Insurance is the Superintendent of Insurance. The first Superintendent was appointed in 1875 as head of a newly created Insurance Branch of the Department of Finance. In 1910 the Insurance Branch was organized as a separate Department, the Department of Insurance, under the Minister of Finance.

Precedent to obtaining initial registration, in addition to filing certain documents, including a full and complete financial statement, a company must satisfy the Minister that it is sound and solvent and must make the required initial deposit of securities, varying from \$10,000 to \$100,000, depending on the class of business to be undertaken. Annual returns are required of all registered companies and the Acts require an examination to be made, by the Superintendent or on his behalf, of the books and records of companies with a view to substantiating the accuracy of the statements filed and the soundness of the companies. Should any company show an unsatisfactory financial condition, the Acts require remedial measures to be taken. British and foreign companies are required to maintain in Canada assets sufficient to cover all of their liabilities in Canada, while Canadian companies are required to maintain in Canada all of their assets, except such as it may be necessary to deposit outside of Canada as security for 'out of Canada' business.

The statistics herein given for companies registered by the Dominion are divided into three classes relating to: (1) insurance against fire; (2) life insurance; and (3) miscellaneous insurance, viz., accident, automobile, aviation, burglary, credit, earthquake, explosion, falling aircraft, forgery, fraud, guarantee, hail, inland transportation, live-stock, machinery, personal property, plate glass, property, sickness, sprinkler leakage, steam boiler, title, tornado, and weather insurance. These statistics are compiled from the reports of the Department of Insurance; throughout they apply to calendar years.

Since 1915, the Department of Insurance has collected statistics, included herein for 1938, of business transacted by provincial companies licensed by the provinces, classified as to: (1) business transacted within the province of incorporation, and (2) business transacted in other provinces.

Returns for unlicensed insurance (above referred to) formerly collected, for taxation purposes, under the Special War Revenue Act, are no longer required. The last figures are for the year 1933 and appear at p. 1016 of the 1934-35 Year Book.

Statistics of Dominion Government annuities are given at the end of this chapter. The Department of Labour administers the Acts under which these annuities are sold.

---

\* The Canadian and British Insurance Companies Act, 1932 (22-23 Geo. V, c. 46). The Foreign Insurance Companies Act, 1932 (22-23 Geo. V, c. 47).

## Section 1.—Fire Insurance.

Fire insurance in Canada began with the establishment by British fire insurance companies of agencies, usually situated in the seaports and operated by local merchants. The oldest existing agency of a British company is that of the Phoenix Fire Office of London, now the Phoenix Assurance Company, Ltd., which commenced business in Montreal in 1804. On account of the growth of the insurance business of these early British companies, branch offices were established and local managers were appointed, charged with directing the companies' affairs in Canada.

The Halifax Fire Insurance Co. is the first purely Canadian company of which any record is available. Founded in 1809 as the Nova Scotia Fire Association, it was chartered in 1819 and operated in the Province of Nova Scotia until 1919 when it was granted a Dominion licence. Among the other pioneer fire insurance companies still in operation, mention may be made of the following: the Quebec Fire Assurance Co., which commenced business in 1818 and was largely confined in ownership and operations to Quebec Province; the British America Assurance Co., incorporated in 1833, the oldest company in Ontario; the Western Assurance Co., organized in 1851, and now, after a rapid and steady growth, one of the largest companies of its kind on the continent; two United States companies, the *Ætna* Insurance Co., Hartford, Conn., and the Hartford Fire Insurance Co., which commenced business in Canada in 1821 and 1836, respectively.

The report of the Superintendent of Insurance for the year ended Dec. 31, 1938, shows that at that date there were 275 fire insurance companies doing business in Canada under Dominion registration; of these 56 were Canadian, 69 were British, and 150 were foreign companies. In 1875, the first year for which authentic records were collected by the Department of Insurance, 27 companies operated in Canada—11 Canadian, 13 British, and 3 United States. The proportionate increase in the number of British and foreign companies from 59 p.c. to 80 p.c. of the total number is a very marked point of difference between the fire and life insurance businesses in Canada, the latter being carried on very largely by Canadian companies.

Although in its early days the Dominion did not prove a very lucrative field for fire insurance companies, the great advance in building construction and the wide use of improved fire appliances and safety devices have materially reduced the danger of serious conflagrations and have placed the risks assumed by companies in Canada on an equality with those of other countries.

A feature of the fire insurance business, besides the large percentage of British and foreign companies, is the continued increase in the number of companies that are operating on the mutual or reciprocal plan. These companies, in which all profits or losses are directly received or paid by the policyholders, are making themselves felt as competitive factors in the fire insurance business.

**Statistics of Fire Insurance.**—The net amount of fire insurance in force on Dec. 31, 1938, with companies holding Dominion licences, was \$9,953,905,417, while the net amount in force with provincial companies on the same date was \$1,214,374,556. Thus the grand total net fire insurance in force on Dec. 31, 1938, with Dominion and provincial companies was \$11,168,279,973.

In Table 1 it is shown that the average cost per \$100 of insurance reached a maximum in 1904 and 1905; there has since been a steady decrease with the exception of the years 1921, 1922, and 1924, when temporary reversals of the downward swing were in evidence. It is noteworthy that the cost of fire insurance has decreased by 57·5 p.c. since 1905.

**1.—Summary Statistics of Fire Insurance by Companies Operating under Dominion Registration, 1901-39.**

NOTE.—Figures for the years 1869-1900 are given at p. 973 of the 1939 Year Book.

**Summary of Fire Insurance in Canada, 1938.**—Of the total amount of fire insurance effected in Canada during each year, a part is sold by companies holding provincial licences and permits. Such companies generally confine their operations to the province of incorporation, but may be allowed to sell insurance in other provinces. The bulk of fire insurance business, however, is transacted by companies registered by the Dominion.

**7.—Dominion and Provincial Fire Insurance in Canada, 1938, with Totals for 1937.**

**Fire Losses.**—Closely allied to the subject of fire insurance is the question of fire losses. The Dominion Fire Prevention Association publishes, under the auspices of the Dominion Department of Insurance and with the co-operation of the Association of Canadian Fire Marshals, a report of the loss of life and property caused by fire, from which the information shown in Tables 8 and 9 has been summarized.

In addition to the data there shown, the report gives such information as: per capita losses by provinces and by type of building, numbers of fires reported, origins of fires, and criminal investigations arising from fires.

In 1939, the per capita loss was greatest in Nova Scotia, being \$2.99 as against the Dominion average of \$2.18. The uninsured losses amounted to \$5,452,892, or 22.1 p.c. of the total. Of the 45,755 fires reported in 1939, 1,402 were the subject of official inquiry, 152 prosecutions were instituted, and 107 convictions were registered.

**8.—Fire Losses in Canada, 1926-39.**

**NOTE.**—For fire losses from 1923-25, see *Statistical Report of Fire Losses in Canada, 1926*, published by the Dominion Department of Insurance. An estimate of losses from 1898-1922 was published in *Statistical Bulletin No. 27 (1922)*, issued by the same Department.

<sup>1</sup> This amount was given as the total loss, no uninsured losses being reported for Saskatchewan in 1938.

## Section 2.—Life Insurance.

An article descriptive of the growth and development of life insurance in Canada, more particularly with reference to insurance legislation, contributed by A. D. Watson, of the Department of Insurance, Ottawa, appears at pp. 937-944 of the Canada Year Book, 1933.

**Life Insurance Statistics.**—Life insurance business was transacted in Canada in 1938 by 41 companies registered by the Dominion, including 28 Canadian, 4 British, and 9 foreign companies. There were also 8 British and 5 foreign companies registered to write insurance, that had practically ceased to write new insurance, while 2 other British and 3 other foreign companies were authorized under the Act to transact business in connection only with policies written prior to Mar. 31, 1878. One foreign company was licensed to transact business in 1931, but has not yet written any life insurance business in Canada, except by way of reinsurance. Another foreign company was registered during 1938 for the acceptance of reinsurance only. Because of the surrender in 1938 of its last remaining Canadian policy, one of the British companies which ceased to issue new Canadian business in 1878 withdrew from Canada.

The total net life insurance in force in all companies licensed by the Dominion in 1869 was only \$35,680,082, while in 1938 it was \$6,630,183,594,\* the amount

\* This total does not include \$179,590,977 of fraternal insurance.

per head of the estimated population of Canada has more than doubled since 1919—an evidence of the general recognition of the value of life insurance for the adequate protection of dependants against misfortune. Notable also from these statistics is the fact that in this field British companies, the leaders in 1869, have fallen far behind the Canadian and the foreign companies. Detailed analyses are given in Tables 11 to 19.

**10.—Life Insurance in Force and Effectuated in Canada by Companies Operating Under Dominion Registration (Fraternal Insurance Excluded),<sup>1</sup> 1901-39.**

NOTE.—Figures for the years 1869-1900 are given at p. 958 of the 1938 Year Book.

<sup>1</sup> For statistics of fraternal insurance, see p. 943.

<sup>2</sup> For estimates of populations upon which these figures are based, see p. 103.

<sup>3</sup> During 1937 approximately \$85,000,000, and during 1938 approximately \$60,000,000 were transferred from insurance in force in Canada. These amounts represent mainly transfers to business out of Canada of certain reinsurances previously classed as Canadian business. They also include transfers to annuities of contracts providing for combined insurance and annuity benefits or options.

<sup>4</sup> Subject to revision.

<sup>1</sup> During 1937 approximately \$85,000,000, and during 1938 approximately \$60,000,000 were transferred from insurance in force in Canada. This amount represents mainly transfers to annuities of contracts providing for combined insurance and annuity benefits or options. It also includes transfers to business out of Canada of certain reinsurances previously classed as Canadian business. <sup>2</sup> Death claims, matured endowments, and disability claims.

<sup>1</sup> Expenditure in Canada.

**Life Insurance Effected through Fraternal Benefit Societies.**—In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 18 gives statistics of life insurance effected with fraternal benefit societies by Canadian members, together with statistics of assets, liabilities, income, and expenditure relating to the whole business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. Each benefit fund of every society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries, London; of the Faculty of Actuaries in Scotland; of the Actuarial Society of America; or of the American Institute of Actuaries) and unless the actuary certifies to the solvency of each fund a readjustment of rates or benefits must be made. The statistics in the first part of this table relate to the 10 Canadian societies reporting to the Insurance Department of the Dominion Government.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain Dominion authority precedent to transacting business in Canada, but any such societies which at that date were

transacting business under provincial licences, while forbidden to accept new members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies have since obtained Dominion authority to transact business, also some foreign societies that had not previously been licensed by the provinces. Of both classes of society, 28 transacted business in Canada in 1938.

**Summary of Life Insurance in Canada, 1938.**—In addition to the business transacted by life insurance companies registered by the Dominion, a considerable volume of business is also transacted by companies licensed by the provinces.

Statistics of these provincial companies have been collected since 1915 by the Department of Insurance. Table 19, showing policies effected and in force, premiums received, and claims paid in Canada in 1938, summarizes the volume of business done by Canadian, British, and foreign life companies and fraternal societies, whether registered by the Dominion or licensed by the provinces.

<sup>1</sup> During 1938 approximately \$60,000,000 was transferred from insurance in force in Canada. This amount represents mainly transfers to business out of Canada of certain reinsurance previously classed as Canadian business. It also includes transfers to annuities of contracts providing for combined insurance and annuity benefits or options.

**Life Insurance in Force Out of Canada by Canadian Companies Registered by the Dominion Government.**—Tables 20 and 21 give summary statistics of insurance in force as at Dec. 31, 1938, in currencies other than Canadian, classified by companies and by the currencies in which business was written, respectively. The data are given in Canadian dollars, mainly at par rates of exchange for the countries concerned, but there are several exceptions where, for purposes of account, certain companies have converted foreign currencies at rates other than par, particularly where the current rate differs substantially from the par rate. The major part (over 62 p.c.) of the business in force was written in United States currency and over 23 p.c. in sterling. From another standpoint, over 32 p.c.

was written in currency of British countries outside Canada and over 67 p.c. in currencies of foreign countries.

Canadian life companies operating under Dominion registration had, at Dec. 31, 1938, life insurance in force in countries outside Canada amounting to \$3,126,295,884. As shown in Table 20, insurance in force in currencies other than Canadian amounted to \$3,033,132,892. The difference between these figures is presumably the net amount of non-Canadian business transacted in Canadian currency. As against the total non-Canadian business, including annuity business, the British and foreign investments of Canadian life insurance companies as at Dec. 31, 1938, amounted to \$781,011,292.

Since the business in force in Canada of these companies at Dec. 31, 1938, amounted to \$4,363,517,357, the total business on their books, Canadian and non-Canadian, amounted to \$7,489,813,241. Thus over 41 p.c. of the total business in force was out of Canada. If to this total are added the amounts of life insurance in force in Canadian fraternal benefit societies registered by the Dominion Government (\$112,698,333 of Canadian, and \$93,883,698 of foreign business), the total business of Canadian companies and societies operating under Dominion registration reached the amount of \$7,696,395,272 at the end of 1938. On the assumption that all provincially licensed companies and societies are Canadian and limit their business to Canada, then, adding the amount of their business in force in Canada (\$133,855,123), the grand total of net insurance in force in Canadian companies and societies, in and out of Canada, amounted to about \$7,830,250,395 at Dec. 31, 1938.

**20.—Life Insurance Effectuated and in Force, and Reserves, by Canadian Companies (Excluding Fraternal Societies) Operating Under Dominion Registration, in Currencies Other Than Canadian, by Companies, 1938, with Totals for 1937.**

NOTE.—Figures are given in Canadian dollars, mainly at par rates of exchange.

### Section 3.—Miscellaneous Insurance.

Since 1875 the growth of insurance business other than fire and life has been steady. The report of the Superintendent of Insurance for the calendar year 1880 shows that the number of companies licensed for the transaction of accident, guarantee, plate glass, and steam boiler insurance—the only four classes of miscellaneous insurance then transacted—was 5, 3, 1, and 1, respectively. The report for the year 1938 shows that miscellaneous insurance in Canada now includes various forms of accident and 24 other classes of insurance transacted by Dominion companies. In 1880, 10 companies transacted business of the miscellaneous kind, but in 1938 such insurance was issued by 250 companies, of which 54 were Canadian, 66 British, and 130 foreign; 192 of these 250 companies also transacted fire insurance. In addition, 18 fraternal orders or societies carried on accident and sickness insurance as well as life insurance business and 2 fraternal orders or societies carried on accident insurance only.

<sup>3</sup> Excluding \$751,566, losses of fraternal benefit societies for accident, sickness, and funeral business.

## Section 4.—Insurance as it Affects the Balance of International Payments.\*

Because insurance business is frequently international in its scope, the activities of this type of financial concern demand a place in studies of the balance of payments and international indebtedness. British and foreign insurance companies have important branch operations in Canada and Canadian insurance companies have external operations that extend into most parts of the world. There were, in 1938, 4 British and 9 United States companies registered to transact life insurance in Canada. In addition to these, there were 8 British and 5 United States registered companies that had practically ceased to do new business in Canada. In the same year, British companies registered to transact fire or casualty insurance in Canada numbered 74 and United States and other foreign companies of this type 197. Besides these companies, there were some registered under provincial insurance Acts and some transacting marine and inland marine insurance for which no certificates of registry are required. At the same time, there were 17 Canadian life insurance companies and 30 Canadian fire and casualty insurance companies carrying on business outside of Canada.

Most of the business carried on by British and foreign companies is transacted by branches in Canada which, in many respects, are similar to internal companies and whose operations are, therefore, to a large extent, domestic and do not give rise to international remittances. Their income in Canada is generally available for Canadian disbursements, and any surplus income there may be is frequently invested in Canadian securities. There is a tendency for these companies to build up Canadian assets against liabilities in Canada because Canada is a favourable field for investment. In the estimate of British and foreign capital invested in Canada, p. 881, the insurance item includes net assets held at the branches of British and foreign insurance companies in Canada along with the value of equity of non-resident shareholders in Canadian insurance companies.

The activities of Canadian insurance companies in other countries also do not give rise to transactions affecting the balance of international payments to the extent that might be expected from the size of the operations abroad. In many respects the transactions are entirely outside of Canada and do not directly touch the Canadian economy. A comparison of the assets and liabilities of Canadian companies outside of Canada shows that the liabilities exceed the assets, and for this reason the assets of such companies do not appear in the statement of Canadian investments abroad at p. 881. Such assets, however, have significance in relation to the Canadian economy, since a large part of them is represented by foreign marketable securities that may be transferred to or from Canada. The difference between the total assets held outside of Canada and the foreign securities held outside of Canada is due to other assets such as real estate, mortgages, loans and cash, etc., as well as substantial amounts of Canadian securities held outside of

---

\* A much more detailed treatment of this subject will be found in Chapter XX of the publication "The Canadian Balance of International Payments—A Study of Methods and Results", by Herbert Marshall, B.A., F.S.S., Chief of the Internal Trade Branch, Dominion Bureau of Statistics. Price, \$1. The subject of international balance of payments as a whole is dealt with in the External Trade chapter, at pp. 584-589.

Canada. All the foreign securities owned, however, are not held outside of Canada. At the end of 1936, the foreign securities held in Canada were valued at \$175,000,000. These are shown in the statement of Canadian investments abroad because of their origin, although the interest and dividends received from them may not always be remitted to Canada. There is a large turnover in foreign securities resulting from the operations of Canadian life insurance companies, but since the bulk of the transactions are executed abroad, through the agency of the branch offices of the insurance companies abroad, the financial transactions connected with many are entirely external to Canada and do not affect the Canadian balance of payments.

Because of the various factors at work influencing the valuation of investments and the disposition of surplus income abroad, it has been found necessary to obtain records of movements of funds especially for the balance of payments statement. Such information has been collected by the Bureau of Statistics on two schedules, one for Canadian companies and another for British and foreign companies with branches or agencies in Canada. The schedule for the Canadian companies is in three sections that call, respectively, for the following information: (1) movements of funds between insurance companies and their branches, agencies, bank accounts, and shareholders abroad; (2) movements of funds between Canadian insurance companies and other companies, policyholders, or individuals outside of Canada not included in (1); and (3) transactions that must be taken account of as debits in the Canadian balance of payments to cover situations arising when interest or principal on certain Canadian bonds is collected in sterling or United States dollars and not remitted to Canada. The schedule sent to the British and foreign companies operating in Canada is divided into two sections as follows: (1) movements of funds between branch or agency in Canada and head office or other offices outside of Canada; (2) movements of funds between branch or agency in Canada and other companies, policyholders, or individuals outside of Canada not included in (1). The companies whose movements of funds have been recorded are limited to those registered with the Dominion Department of Insurance. However, such companies account for the bulk of the insurance business in Canada.

The movements of funds between Canada and other countries, by groups of companies and the movements of such funds by classes of companies are shown in the tables at p. 954. Movements of funds in connection with international purchases or sales of securities that have been executed through the medium of brokers, investment dealers, or other agencies resident in Canada are not included, since they are taken account of in the record of international trade in securities.

The figures shown demonstrate how unpredictable, in the main, these transactions are. There has been no consistent trend or total net movement that may be considered typical, although in the case of Canadian companies in Table 26 the net inward movement is emphasized as compared with the net outward movement for foreign companies. However, although there have been some abrupt changes in direction from one year to another, it appears that a definite movement in one direction is usually maintained for several years. This suggests that the basic factors underlying the movements of funds may be subject to changes that require some time to develop.

## Section 5.—Government Annuities.

For more than thirty years the Dominion Government has carried on a service that permits and encourages Canadians, during the earning period of their lives, to make provision for their old age. The necessary legislation was passed in 1908 as the Government Annuities Act (c. 7, R.S.C., 1927, amended by c. 33, 1931). This Act is now administered by the Minister of Labour, and provides that any person resident or domiciled in Canada may purchase an annuity from the Government of Canada.

A Canadian Government annuity is a fixed yearly income paid by the Government of Canada. The income is payable in quarterly instalments (unless otherwise expressly provided) for life, but may be guaranteed for ten, fifteen, or twenty years in any event. The minimum amount of annuity obtainable on the life of one person

or on the lives of two persons jointly is \$10 a year and the maximum amount of annuity payable to any annuitant or to joint annuitants is \$1,200 a year.

Although in the vast majority of cases annuities issued on the lives of individuals are purchased by the individuals themselves, provision is made in the Act whereby employers may contract for the purchase of annuities on behalf of their employees, or associations on behalf of their members. In the latter case the purchase money required may be derived partly from the wages of employees and partly from employers' contributions.

The growth of retirement annuity plans in recent years is indicative of the co-operative trend of labour and capital in the industrial organization. At Mar. 31, 1939, group annuity plans had been contracted between the Government and some 50 industrial firms and institutions (religious and educational) involving 6,000 lives. By the sale of these group annuities, a reasonably adequate income for old age is assured for a growing proportion of the working population.

Annuity contracts are of two classes, deferred and immediate, under each of which there are various plans available. Deferred annuity contracts are for purchase by younger persons desiring to provide for their old age, purchase being made by monthly, quarterly, or yearly premiums, or by a lump sum. Immediate annuity contracts are for purchase by older persons wishing to obtain immediate incomes through their accumulated savings.

The property and interest of the annuitant in a contract for a Government annuity is neither transferable nor attachable. As a rule, the purchaser contracts that, in the event of the death of the annuitant before the date fixed for the annuity to begin, all money paid shall be refunded to the purchaser or his legal representatives with interest at the rate of 4 p.c. per annum, compounded annually.

From Sept. 1, 1908, the date of the inception of the Government annuities system, up to and inclusive of Mar. 31, 1939, the total number of annuity contracts issued was 51,141. Of these contracts, 4,171 have been cancelled, leaving in force on Mar. 31, 1939, 46,970 contracts. The total amount of purchase money received during the same period was \$133,298,497.

<sup>1</sup> Undetermined.

<sup>2</sup> Amount of immediate annuities.

It will be seen from the statements above that Government annuities have grown steadily in favour, especially since 1921, the fund reaching a total of \$123,066,398 on Mar. 31, 1939.

# CHAPTER XXIV.—COMMERCIAL FAILURES.

## CONSPECTUS.

	PAGE.		PAGE.
SECTION 1. INDUSTRIAL AND COMMERCIAL FAILURES FROM PRIVATE SOURCES...	958	SECTION 3. ADMINISTRATION OF BANKRUPT ESTATES.....	963
SECTION 2. COMMERCIAL FAILURES FROM ADMINISTRATIONS UNDER DOMINION LEGISLATION.....	960		

According to Sect. 91 of the British North America Act, "the exclusive legislative authority of the Parliament of Canada" extends to bankruptcy and insolvency legislation, and an Insolvency Act (32-33 Vict., c. 16) was actually passed by the Dominion Parliament in 1869, applying to the four original provinces. This Act was in force for four years and was renewed by c. 46 of the Statutes of 1874, while in 1875 a new Insolvency Act (38 Vict., c. 16) applicable to the whole Dominion was passed, but was repealed in 1880. After this there was no Dominion legislation on the subject of bankruptcy until 1919. During the interval of nearly 40 years commercial failures were handled under provincial legislation, and the statistics relating to such failures during this period were compiled and published by Dun's and Bradstreet's commercial agencies. In 1919 a general Dominion Bankruptcy Act was passed (9-10 Geo. V, c. 36). Statistics of commercial failures dealt with under this Act since it came into force in 1920 have been compiled and published by the Dominion Bureau of Statistics. (See pp. 960-962.)

The three Sections of this chapter, although closely related so far as subject matter is concerned, cover different aspects of the same field and the statistics presented in each Section are not comparable with those in the others.

Statistics of industrial and commercial failures in Canada, given in Section 1, are compiled by Dun and Bradstreet, Inc. This concern is a mercantile agency interested primarily in credit information, and it is not to be expected that their data will be compiled on the same basis as figures of the Dominion Bureau of Statistics or the Superintendent of Bankruptcy. Their statistics are established on a broader basis than those of Section 2, inasmuch as they include, as well as bankruptcies in general, insolvencies under provincial companies' Acts and such proceedings as bulk sales, bailiffs' sales, landlords' seizures, etc., when loss to creditors results. On the other hand, they do not include assignments of farmers (under the Farmers' Creditors Arrangement Act) or of wage-earners, so that as a general rule their totals run lower than those in Section 2. As pointed out, between 1875 and 1919 Dun and Bradstreet were the only source of figures of commercial failures, and their statistics have an added value because they present an unbroken historical series, though not on a comparable basis since 1934 (see text preceding Table 1).

Section 2, on the other hand, is limited to bankruptcies and insolvencies made under Dominion legislation, such as the Bankruptcy Act (including the Farmers' Creditors Arrangement Act), the Winding-Up Act, and the Companies' Creditors Arrangement Act, but not failures, sales, or seizures carried out apart from such Dominion legislation. In the field covered, however, Section 2 is broader than Section 1, inasmuch as the Dominion Bureau of Statistics figures include failures of individuals such as wage-earners and farmers.

A word should be added as regards the value to be placed upon figures of assets and liabilities. Such values are estimates made by the debtor and unfortunately are not uniformly made. The human equation enters into them to a considerable degree and they must be accepted with this qualification.

Section 3 is limited to the administration of bankrupt estates by the Superintendent of Bankruptcy, under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act). This Section, however, gives definite information on the amounts realized from the assets as established by debtors and indicates that values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can be assumed that this applies in even greater degree to the extended fields covered in Sections 1 and 2.

## Section 1.—Industrial and Commercial Failures from Private Sources.

A historical table giving failures for Canada and Newfoundland by classes for the years 1915 to 1935 appears at p. 969 of the 1936 Year Book. Early in 1936, however, Dun and Bradstreet, Incorporated, from whose reports these figures were taken, adopted a new method of classification. The principal changes consisted of setting up a new group of construction enterprises previously included in manufacturing and a new class for commercial service. Real estate companies, holding and other financial companies, and agents of various kinds were dropped. These changes have had the effect of confining the failure records more to industrial and commercial lines of activity, and liabilities are reduced more in proportion to the number of failures since the companies eliminated usually ran high in indebtedness. The present figures of Table 1 are not comparable with those given at p. 969 of the 1936 Year Book, because of the above reasons and because the earlier statistics cover Canada and Newfoundland whereas these are for Canada only.

In 1939 Quebec and Ontario accounted for 45.5 p.c. and 27.6 p.c., respectively, of the total failures in the Dominion. As regards liabilities, while the two Provinces ranked in the same order, Quebec accounted for a greater percentage of the total, 50.6 p.c. as compared with 24.3 p.c. registered for Ontario.

**Failures, by Divisions of Industry.**—In every year the great majority of the commercial failures of the country are found among trading establishments, which are so much more numerous than manufacturing establishments. Thus, according to the records of Dun and Bradstreet, Incorporated, out of a total of 1,299 commercial failures in Canada in 1939, 874 were among the retail trading establishments, including 213 in foods and 183 in apparel. Out of the 234 manufacturers who failed, 65 were in the textiles business, 48 in foods, and 20 among manufacturers of forest products.

## 3.—Industrial and Commercial Failures in Canada, by Divisions of Industry, 1937-39.

(From Dun and Bradstreet, Incorporated.)

NOTE.—Figures for 1934-36 will be found at p. 951 of the 1937 Year Book.

## Section 2.—Commercial Failures from Administrations under Dominion Legislation.

Under the Bankruptcy and Winding Up Acts (R.S.C. 1927, cc. 11 and 213) certain documents relating to estates administered under these Acts have, since 1920, been forwarded to the Dominion Statistician for statistical analysis. The statistics of this Section cover all bankruptcies and insolvencies that fall under Dominion legislation including assignments of individuals and farmers.

### Section 3.—Administration of Bankrupt Estates.

The administration of bankrupt estates is now supervised by the Superintendent of Bankruptcy (appointed in 1932) with the object of conserving as far as possible the assets of bankrupt estates for the benefit of the creditors. Figures from the first report are given at p. 1039 of the 1934-35 Year Book, and those for subsequent years are to be found in later editions.

#### 8.—Assets, Liabilities, Assets Realized, and Costs of Administration in Bankrupt Estates Closed, 1933-39, and by Provinces, 1939.

<sup>1</sup>Exclusive of the city shown separately.

<sup>2</sup>In addition to the payments by the trustee, secured creditors valued their security or realized on it themselves without the intervention of the trustee to an amount of approximately \$3,688,064.

The Farmers' Creditors Arrangement Act came into effect Sept. 1, 1934. Assignments are made only in those cases in which the farmers are hopelessly insolvent and in many cases the assignments follow the rejection of proposals submitted to the creditors. Receiving orders are made only in cases in which the farmers have failed to fulfil the terms of their proposals as accepted by the creditors and approved by the court. Table 9 shows only statistics of estates closed by assignments and receiving orders and does not indicate the proposals that have been approved and are being carried out under the Bankruptcy Act.

### Section 1.—Schools, Colleges, and Universities.

The British North America Act assigned public education in Canada, except in the case of the native Indian population, to the jurisdiction of the Provincial Governments. A system of public elementary and secondary education, financed mainly by local school authorities but assisted by provincial grants, has developed in each province. There are some private schools in all provinces (i.e., schools that are not conducted by publicly elected or publicly appointed boards and that are not financed out of public money) but their enrolment is not large in comparison with that of the public schools. At the level of higher education, six provinces each have a provincially supported university, and the remaining three each have one or more colleges supported out of provincial funds.

Table 2 of this Chapter gives statistics of enrolment in four different categories of educational institutions including Dominion Indian schools. Indian schools are treated more fully in Chapter XXVIII, Miscellaneous Administration, along with other information on Indian Affairs.

**School Attendance in Relation to Educational Status of the Entire Population.**†—School attendance data, collected annually, do not give the number of persons of school age who are not at school. Even the number of persons who, at a fixed date, report themselves as having been at school is not necessarily the same as the number of persons who attended school during the year. In a rapidly moving population the difference may be considerable. Much less do annual figures show the penetration of schooling into the population structure as a whole. In this respect a study of census data must be depended upon.

*Educational Status of the 1931 Population.*—In considering the educational status of those now living in Canada, not only present school attendance but school attendance as far back as 1861 must be considered, since the ages at which schooling took place may have been anywhere between 5 and 19 years for persons now 75 years of age or over. Unfortunately, records of school attendance are not available for 1861 or 1891. From figures of other censuses, data are interpolated in Table 1 so as to show the numbers of the present population who were of school age at each of those dates and an approximation of the educational status of the 1931 population is thus obtained, in spite of the fact that the figures are qualified by the several factors brought out in the footnotes to the table.

\* Revised, except for those parts otherwise indicated, by J. E. Robbins, M.A., Ph.D., Chief, Education Statistics Branch, Dominion Bureau of Statistics. This Branch is concerned with compiling and publishing comparable data relating to educational institutions throughout Canada, and to this end co-operates with the Provincial Departments of Education. A list of the publications of this Branch will be found in Chapter XXI X, Section 1, under "Education".

† Prepared by M. C. MacLean, M.A., F.S.S., Chief of Social Analysis, Dominion Bureau of Statistics.

**1.—Persons of the 1931 Population of School Age (5-19) and Persons Attending School in 1931, and at the Dates of the Seven Previous Decennial Censuses.**

Year:	Population of School Age.			Attending School.	
	Canadian Born. <sup>1</sup>	Immigrant. <sup>1</sup>	Total.		
	No.	No.	No.	No.	p.c.
1931.....	3,017,687	3,436	3,021,123	1,983,971	65-67
1921.....	2,188,938	227,622	2,416,560	1,483,042	61-37
1911.....	1,394,569	244,785	1,639,354	867,874	52-94
1901.....	1,133,255	271,494	1,404,749	733,700	52-23
1891.....	877,125	96,231 <sup>2</sup>	973,356 <sup>2</sup>	504,198 <sup>3</sup>	51-80 <sup>3</sup>
1881.....	606,627	97,653 <sup>2</sup>	704,280 <sup>2</sup>	361,999 <sup>4</sup>	51-40 <sup>4</sup>
1871 <sup>5</sup> .....	366,044	65,581 <sup>2</sup>	431,625 <sup>2</sup>	216,373 <sup>4</sup>	50-13 <sup>4</sup>
1861.....	124,666	26,411 <sup>2</sup>	151,077 <sup>2</sup>	74,027 <sup>3</sup>	49-00 <sup>3</sup>

<sup>1</sup> The fact that it is impossible to separate repatriated Canadians from either the Canadian born or immigrants leads to a slight duplication. <sup>2</sup> Not comparable with first four figures because it includes all immigrants 5-19 years of age arriving before 1901 whether they were in Canada at ages 5-19 or not.

<sup>3</sup> Estimated. <sup>4</sup> School attendance figures for 1871 and 1881 are for all ages. <sup>5</sup> Populations of Yukon and Northwest Territories are included in 1871 population.

**New School Curricula.**—One of the noteworthy features of education in most of the English-language provinces during the past few years has been revision of the school curricula—the most thorough-going revisions in the hundred years of public education in Canada. Teachers are given much more freedom and responsibility in interpreting them; ‘activity programs’, ‘enterprises’ and ‘projects’ are encouraged; the emphasis on health teaching, physical education, and social studies is substantially increased; the old 8-4 division of grades as between elementary and secondary education is changed to 6-3-3; and there is very much less use of departmental examinations to test successful completion of a year’s work. In some provinces it is now possible to matriculate to university without a single examination external to the school. The old entrance-to-high school examination, obligatory for all students twenty years ago, is now taken by only about one-fourth of the students, considering the provinces together, and the proportion writing external examinations at the end of Grades IX and X is lower still.

**Changes in Rural Administration.**—Another change in the educational structure, widely advocated and beginning to make its appearance, is the adoption of a larger unit of administration for rural schools. The typical unit of rural school administration in the past has been a community of a few dozen families responsible for raising independently the greater part of the money required to operate its schools. (For a description of the system of school administration, see pp. 960-962 of the 1937 Year Book.) Difficulties in this system have long been obvious, and one province (Alberta) has now abandoned it. In a period of three years, beginning in 1933, the Alberta Department of Education has brought its more than 3,000 rural school districts into some fifty school divisions for financial and administrative purposes. Two or three similar units have been established in British Columbia, while Manitoba and Ontario, in some localities, are making headway in consolidating educational services on a municipal or township basis, such as has been used in Quebec. For several years the Nova Scotia, New Brunswick, and Saskatchewan Departments of Education have been giving close attention to the possibility of developing larger units.

**Adult Education.**—Post-school education is a field that has received greatly increased attention in Canada during recent years. The Canadian Association for Adult Education, established in 1935, is one of the very few Dominion-wide educational organizations maintaining full-time staffs. It is being financed largely by

grants from the Carnegie Corporation of New York and the provincial Departments of Education. The Director, at the annual meeting in 1938, reported that the number of people following more or less formal courses, apart from the regular school and university enrolment, was in the neighbourhood of 200,000. The Association aims to assist the various agencies whose work is represented by this enrolment, as well as to encourage more informal types of adult education. It is collaborating with the Canadian Broadcasting Corporation, for instance, in its attempt to train leaders for listening groups and make radio a more influential educational factor. It is co-operating with the National Film Society and the Canadian Film Committee in the development of Canadian cultural and educational films.

Some of the most distinctive work of Canadian universities has been done by their extension services on behalf of the population at large. The University of Alberta is outstanding in the variety of services offered, while others have won an international reputation for work of a specialized kind—notably St. Francis Xavier University in Nova Scotia with its more than one thousand study groups, which aim at bettering the economic and social condition of communities through the formation of co-operative enterprises. The extension service of the University of Toronto has given particular attention to assisting the Workers' Educational Association, which began as an Ontario organization but now has classes in large centres throughout the country. It is not possible to describe here the extent of adult education activities of the universities, but their increasing importance is indicated.

The provincial Departments of Education, too, are giving greater attention to the educational needs of the adult population. The biennial conference of their representatives in 1938 (the Canadian Education Association) took adult education for its central theme. Owing in some measure to the Association's interest in adult education, the Association was joined by Newfoundland and became the Canada and Newfoundland Education Association.

Following upon the outbreak of war in September, 1939, the Canadian Association for Adult Education and the Canadian Legion of the British Empire Service League jointly undertook to organize educational facilities for men in the armed forces, both in Canada and abroad.

**Research in Education.**—The many changes, completed or contemplated in Canadian education during recent years, have led educators to feel a greater need for scientific investigation of their problems, and, since most of the problems are common to a majority of the provinces, they have thought in terms of creating a medium through which they could collaborate in research. Plans have been on foot for a considerable period and resulted, during the early months of 1939, in the formation of a Canadian Council for Educational Research. This Council was supported by Departments of Education through the medium of the Canada and Newfoundland Education Association, by the provincial teachers' organizations through the agency of the Canadian Teachers' Federation, and with assistance for the initial years, from the Carnegie Corporation of New York. The Council is composed of seven members: five on a regional basis (one from each of British Columbia, the Prairie Provinces, Ontario, Quebec, and the Maritime Provinces), the Director of Research for the Canadian Teachers' Federation, and the Chief of the Education Branch of the Dominion Bureau of Statistics.

A record of the first topics proposed for the Council's consideration indicates some of the problems currently to the fore in the minds of Canadian educators:

(1) relations between the school systems and occupations; (2) instruction by correspondence; (3) teacher training; (4) the selective character of Canadian education; (5) tests and examinations to measure the outcome of modern programs of study; (6) the development of educational records that will give the maximum amount of useful information; (7) the effectiveness and practicability of instruction by means of radio and visual materials.

<sup>1</sup> 1936-37 figure.

<sup>2</sup> Schools for the blind, deaf, or mentally defective. These are boarding schools and many of the pupils are from provinces other than the one in which they are at school.

<sup>3</sup> Included with "Universities and Colleges—Preparatory courses".

<sup>4</sup> Includes also those in the Departmental summer schools for teachers in Ontario and British Columbia, not held at universities or colleges.

<sup>5</sup> Official estimates as at June 1, see p. 103.

<sup>6</sup> Includes 175 in ordinary day schools for Yukon and the Northwest Territories.

<sup>7</sup> Includes 453 in Dominion Indian schools for Yukon and the Northwest Territories.

<sup>8</sup> See footnotes 6 and 7.

<sup>9</sup> Includes 14,000 estimated population for Yukon and the Northwest Territories.

## Subsection 1.—Provincially Controlled Schools.

An outline of the provincial systems of school administration is given at pp. 960-962 of the 1937 Year Book. Summary statistics of these along with privately controlled schools, Dominion schools, and universities and colleges are given in Table 2.

A table at p. 963 of the 1937 Year Book includes the record of annual enrolment by provinces from 1911 to 1935, together with the record of average daily attendance shown in Table 3 below. The record of average daily attendance is the more comparable one, as between provinces, and probably the more significant for most purposes. Both figures have been practically at a standstill, or declining, in all provinces, for several years, because of the annually decreasing number of younger children entering the schools. The decrease would be much more pronounced were it not for the tendency of older children to remain in school longer. The extent of this latter trend is indicated at pp. 956-957 of the 1937 Year Book.

## 3.—Average Daily Attendance in Provincially Controlled Schools, by Provinces, 1921-38.

NOTE.—Figures for years previous to 1911 will be found at pp. 839-840 of the 1932 Year Book, and those from 1911 to 1920 at p. 963 of the 1937 edition.

Year.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Total.

<sup>1</sup> Approximate.

<sup>2</sup> Revised since the publication of the 1939 Year Book.

<sup>3</sup> Not available.

A record of the age distribution of pupils in the provincially controlled schools of all provinces is presented in Table 4. The ages of boys and girls are not shown separately, and it should be mentioned that there is a definite tendency for boys to leave school at earlier ages than girls. A table at p. 964 of the 1937 Year Book shows, for the years 1911 to 1935, the comparative numbers of boys and girls in the secondary grades of seven provinces.

**Technical Education.**—Since the War of 1914-18 there has been a tendency toward diversity of instruction at the secondary level. The extent to which communities of various sizes have made provision for technical and commercial instruction is noted below.

Among the 35 cities in Canada with populations of more than 20,000, there are 9 without day technical schools. Three of these—Verdun, Outremont, and Westmount—are within reach of the Montreal Technical School. The others in order of size are Winnipeg, Halifax, Sherbrooke, Sydney, Glace Bay, and Moncton, the last four being among the smaller cities of the group. Evening technical classes are held in practically the same number of larger cities, though not the same cities, those without them in this case being all in Ontario and Quebec.

Among the 103 cities with populations of between 5,000 and 20,000 about one-fourth have day technical schools and a similar number have evening technical classes. In smaller centres day schools are extremely rare, considering that there are nearly 400 places with populations of between 1,000 and 5,000, with only half a dozen schools between them. A considerable number, however, provide evening instruction of a technical character.

As information is not available concerning the number of centres offering commercial instruction in Quebec, reference can be made to only eight provinces. The chief difference to be noted, in comparison with the coverage of other technical instruction, is that approximately twice as many towns and smaller cities include commercial courses in their high schools. There are privately owned business schools in quite a number of others, although they, too, are unusual in places with populations smaller than 5,000.

Enrolment in day technical schools has changed little for several years (an interesting situation in view of the fact that the academic high school enrolment has continued to increase) probably because the technical schools have been filled to capacity with no money available for their extension. Over a ten-year period technical students have increased proportionately more than academic students. They have approximately doubled while the others have increased by less than one-half. Even so, in the eight provinces only about one high school student in five is following a technical course.

*The Technical Education Act.*\*—Under the provisions of the Technical Education Act of 1919, and amendments thereto, only the Province of Manitoba is now participating in grants, all other provinces having received their entire allotments. The ten-year period for which grants were made available by the Act of 1919 came to an end on Mar. 31, 1929. At that time, only the Province of Ontario had been paid the whole of its appropriation, and, by c. 8 of the Statutes of 1929, the other eight provinces were granted a further period of five years to earn the remainder of their respective shares. At the expiration of this extension several provinces still had substantial sums to their credit and the Act was again extended at the 1934 session of Parliament for another five-year term. At the end of this term only the Province of Manitoba had an unexpended balance and once again that Province has, by c. 8 of the Statutes of 1939, been given another five years in which to earn the remainder of its original apportionment, which, at the beginning of the fiscal year 1939-40, amounted to \$275,223.

**Teaching Staffs.**—The teaching staffs of day schools under provincial control in Canada consisted, in 1938, of 73,937 teachers, 19,171 males and 54,766 females. All of the increase of 4,000 teachers since 1930 has been in the male class. Table 5 summarizes statistics regarding rates of salary, except for Quebec where comparable data are not available. A separate report, "Elementary and Secondary Education in Canada, 1936-38" deals in detail with the classification of these teachers, the rates of salary paid, and their teaching experience.

**Financial Statistics.**—Table 6 presents records of the finances of the boards operating the provincial schools, in a comparable way, in so far as this can be done with existing records.

\* Revised by W. M. Dickson, Deputy Minister, Department of Labour.

### 6.—Financial Support of Provincially Controlled Schools in Canada, by Provinces, 1926, 1931, and Recent Fiscal Years.

NOTE.—The receipts shown in the following table do not include any amounts raised by loans, or the sale of bonds or debentures, as all revenue of this nature must be repaid ultimately with money raised by local taxation. With the exception of the Maritime Provinces, for which the information is not available, the total debenture indebtedness of the schools of each province is given annually, thus showing the net increase or decrease per year. Figures for 1914 to 1925 will be found at pp. 985-987 of the 1936 Year Book and those for intervening years from 1926 at pp. 967-969 of the 1937 edition and p. 989 of the 1938 edition.

<sup>1</sup> Includes tuition fees where these are recorded.

<sup>2</sup> Includes contributions to teachers' salaries in the Maritime Provinces, and, in New Brunswick, grants made to schools by the Vocational Education Board.

<sup>3</sup> Record not available.

<sup>4</sup> The Ontario figures include the township grant towards the salaries of rural public school teachers.

<sup>5</sup> In the rural municipalities of Manitoba about three-fifths of the school support is equalized by a uniform rate levied over the whole municipality.

<sup>6</sup> Revised since the publication of the 1939 Year Book.

<sup>7</sup> Larger "school divisions" are being established to perform many of the administrative duties formerly confined to the rural school districts, though the districts retain their identity for certain purposes.

### Subsection 2.—Private Schools.

**Private Elementary and Secondary Schools.**—There are numerous schools in each province except Quebec doing work similar to that of the ordinary provincially controlled schools, but that are not publicly financed or administered and hence are not included in Subsection 1. Except in Quebec, the private schools have from about 2 to 4 p.c. of the elementary and secondary pupils in the different provinces. In Quebec the proportion is about 10 p.c., but most of these schools are subsidized by the Provincial Government and reports include a record of them similar to, and in some cases (as of average daily attendance) inseparable from, the records of publicly controlled schools. Thus their statistics are of necessity included in Subsection 1. Table 7, however, shows their enrolment at intervals from 1921, the year in which the Education Branch of the Dominion Bureau of Statistics commenced the collection of reports from private schools. A directory of the schools is included in the "Annual Survey of Education, 1936".

### 7.—Enrolment in Private Elementary and Secondary Schools in Canada, by Provinces, 1921, 1926, 1931, and 1936-38.

NOTE.—Figures for intervening years are given at p. 970 of the 1937 Year Book.

Year.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Total.
1921.....	682	3,047	2,607	54,671	9,961	3,149	1,608	2,274	3,159	81,158

**Business Colleges.**—There are private schools in fields of education other than elementary and secondary, the most numerous group working in the field of business and commercial education. A record of enrolment from this group also has been collected by the Education Branch of the Dominion Bureau of Statistics since 1921.

### 8.—Enrolment in Private Business and Commercial Schools (Business Colleges) in Canada, by Provinces, 1921, 1926, 1931, and 1936-38.

NOTE.—Figures for intervening years are given at p. 971 of the 1937 Year Book.

### Subsection 3.—Higher Education.

Editions of the Year Book previous to 1938 include considerable current information on universities and colleges, concerning enrolment, graduates, teaching staffs, and finances. For example, at pp. 971-978 of the 1937 Year Book the enrolment and number of graduates of individual schools of higher education for the

year 1934-35 are presented and reference is made to previous editions of the Year Book in which statistics regarding the finances, staffs, etc., of these institutions are given. Statistics of this nature may be consulted in the report "Higher Education in Canada 1936-38", published by the Dominion Bureau of Statistics.

**Trends in Current Revenue since 1921.**—Recorded revenues rose from less than \$10,000,000 in 1921 and 1922 to almost \$14,000,000 in 1931, then after declining for four years, rose again to their present level of \$15,000,000. Since the decline of 1931 began, heavy deficits have been shown by many of the institutions. Evidence of these having been met to some extent by the use of capital funds is to be found in the final column of the Table 9 showing value of endowments and other revenue-yielding property.

Important changes have taken place in the sources of revenue. These are summarized by the following percentages:—

	P. C. of Total Revenue Contributed.	
	1921.	1939.
Government grants.....	49.8	42.2
Student fees.....	20.1	32.7
Endowments.....	16.4	13.2
Miscellaneous (including religious bodies).....	13.7	11.9
All sources.....	100.0	100.0

Students have been called upon to provide a decidedly increased proportion of the money required to operate the universities, while other sources of revenue—provincial grants, interest, etc.—have declined, relatively, at approximately equal rates. This is a trend that, unaccompanied by any substantial increase in funds available for student aid, tends to make financial means, rather than intellectual ability, the basic qualification for a university education in Canada.

From the matriculation scholarships and bursaries at present available only one student per hundred of each year's high school graduating class can receive financial assistance, i.e., only one in seven or eight of those who enter university. The others must rely on private means—with some exceptions, such as those at present benefiting from student aid under the Dominion-Provincial Youth Training Program.

Even in provincial universities in Canada, in normal times, students have not been admitted without fees as is still the practice in some of the state universities in the United States and other countries. In the latest ten years the increase in tuition fees for a year in the Arts course at the provincial universities has ranged from 37 p.c. to 200 p.c., averaging about 80 p.c. for the 7,000 students concerned.

The prospect of equality in educational opportunity for persons of equal ability—the generally accepted ideal of democracy—seems more and more remote.

**University and College Revenues in 1939.**—The current revenue of the universities and colleges (about \$15,200,000 in 1939), recorded in Table 9, is exclusive of income from board and lodging. However, it does not all represent revenue for the purpose of higher education. Some of the colleges have preparatory departments, and most of the larger universities spend considerable parts of their incomes on extension services for the general public. Deduction of such sums, and addition of an estimate for the unreported institutions (with 20 p.c. of total enrolment) would indicate that the total amount available for operation of places of higher education in Canada was between \$17,000,000 and \$18,000,000 for the academic year ended in 1939.

A better appreciation of the significance of this amount may be gained by considering it in relation to support for some other educational or cultural institutions. It is equivalent to about one-half of the receipts of motion picture theatres, about one-third of the sum required to produce our newspapers and magazines, or one-eighth of the amount contributed to the support of elementary and secondary schools.

**Capital Resources.**—The value of university plants (sites, buildings, and equipment) almost doubled between 1921 and 1932, with an average annual increase of nearly \$4,000,000 in the institutions reported. Since 1932 there has been little change, making the 18-year average less than \$2,500,000 per year.

As might be expected, additions to endowment did not keep pace with additions to plant. A certain amount of construction continued into the depression years, but the market crash of 1929 was apparently decisive in stopping additions to endowment. The average annual increase in property other than plant was about \$1,500,000 over the 18 years. The nominal value, in fact, doubled from the \$28,000,000 of 1921, but its earning power, in terms of interest and dividends, increased by only about one-third.

The increase in capital resources of all kinds, over the 18-year period, was \$4,000,000 per year—from \$76,000,000 to \$148,000,000.

### 9.—Financial Statistics of Universities and Colleges in Canada, 1921-39.

NOTE.—This table provides a record of the annual income since 1921 of the larger universities and many of the colleges in Canada. The institutions omitted are mainly those conducted by religious orders, where teachers receive little or no salary, and the financial returns consequently do not present a comparable record. Those included have enrolled approximately 80 p.c. of the full-time students of university grade throughout the period.

**Graduates from Schools of Higher Education.**—The number of university graduates since 1923 or 1924, when the abnormalities of enrolment resulting from the War of 1914-18 had practically disappeared, has increased by about 50 p.c. Nearly 3 p.c. of the young people growing up in Canada to-day become university

graduates—about 4 p.c. of the young men and 1.5 p.c. of the young women. The proportion receiving degrees in Arts or Science is now nearly double that of fifteen years ago, but in several of the other faculties the proportion has not increased at all, and in some has definitely fallen.

It is of interest to recall that university education for women in Canada began only within the lifetime of the older generation still living. According to the archives of the Canadian Federation of University Women, it was not until about 1850 that women were first admitted to a university course in Canada, and only about 50 years ago that the practice became general.

There has been no tendency in post-War years for women to increase their enrolment in such professional lines of study as medicine, dentistry, pharmacy, law, theology, or missionary courses. A few appear in the record of every branch of study into which enrolment can be divided, except forestry, but they have held in the main to Arts, including Science and Commerce, and to Education, Social Service, and Public Health. Altogether they constitute about one-fourth of university graduates, but their proportion of the total has not tended to increase noticeably since the abnormal enrolment of returned soldiers came to an end in the early 1920's. Their proportion is highest in Ontario and the western provinces.

## Section 2.—Scientific and Industrial Research in Canada.

The signal for the practical application of science and invention to industry on a wide scale was given between 1750 and 1800 when the steam engine, supplemented by the inventions of Hargreaves, Compton, and Cartwright, revolutionized the textile industry, then transportation, and finally all industry and gave to Britain the lead that placed her in the vanguard of industrial progress. But for many years the scientific point of view was not understood and scientists were pictured as absent-minded men who had little or no conception of the practical details of everyday life. As late as 1794, Lavoisier, the great chemist, lost his head at the guillotine because, in the words of the President of the Court, "the Republic has no need for chemists".

In Canada, the need for co-ordinated research was not widely recognized until the War of 1914-18. It is true that Canadians had shown initiative and marked ability in many fields of scientific investigation in which individual research was necessary but, taken by and large, industry itself was not alive to the benefits that science could give. From the early years of the War, however, enterprising Canadian manufacturers found opportunities for entering upon new lines of manufacture with practical control of the market at a time when agriculture was booming, prices were abnormally high, and imports of competitive goods were shut off. This was Canada's industrial opportunity. Naturally, factory methods became more specialized and a high degree of administrative and mechanical efficiency was attained, but the times and the conditions were not such as to stimulate interest in research methods. The sheer independence and initiative of the Canadian manufacturer was enough of itself to bring success.

After 1918, the application of research was imperative if Canadian industry was to retain the lead it had won, but the incentive was often lacking: competition was keener and the manufacturer had to cut his costs to the limit in order to survive the successive periods of post-war depression. It was during this time that pressure on the Government for help was greatest. For Government aid to be effective, however, it was necessary to enlist the active support of the industrialist, without undermining his independence and initiative, or chaining him to the routine of government administration.

Up to this time the improvement of old and the discovery of new industrial processes had depended on the initiative of the manufacturer; now they depended on the co-operation of progressive industry with science and the practical application of the results obtained in the laboratories of scientific men. Yet difficulties had to be faced. Under the present economic system, such efforts must not be too centralized. Manufacturers who carry on their own research work are legitimately jealous in their effort to keep the results to themselves. Yet the Government can help even in the most exclusive fields by promoting scientific research along generally useful lines and handing the results over to industry as a whole or, again, by assisting in the solution of individual problems of national importance, as in the case of the separation of radium from Great Slave Lake ores, carried out by the Mines and Resources Department in co-operation with Eldorado Mines in 1933. All considerations point to the necessity for co-operation along such lines wherever possible. If industries engaged in the production of similar articles can be brought to improve their product continually by their own systematic efforts, then the ability of the Government to make joint contributions through the channels of governmental

research is greatly facilitated. It was to achieve these ends that the research facilities of the various Departments of the Dominion Government and, latterly, the National Research Council were organized in Canada. Because of the widespread and varied activities of the National Research Council in co-operation with departmental, institutional, and industrial organizations throughout Canada, its work is dealt with first.

### Subsection 1.—The National Research Council.\*

The National Research Council was established in 1916 as a result of the realization that a modern industrial country, particularly in time of war, must have its research facilities and resources organized and correlated. Following the lead of the United Kingdom, there was established in 1916 an Honorary Advisory Council for Scientific and Industrial Research. The work of the Council increased rapidly during the years of peace and when war broke out in 1939 its function as the scientific arm of the Government became increasingly apparent and in a few weeks the normal peace-time program had been transformed very largely into or deferred in favour of war projects which, of course, cannot be discussed in detail at the present time.

For some years following its establishment the National Research Council was not equipped with a laboratory of its own and functioned only as a consulting and co-operating agency, giving financial aid and leadership in the organization of research and ensuring the most efficient use of the various laboratories and technical staffs available in universities, departments of government, and industry. To-day the Council has its own laboratories in Ottawa that enable it to fulfil its responsibility more efficiently, but it also continues to work in the closest co-operation with all organizations interested in research and to consult and co-operate with research workers throughout Canada and the Empire. The consultative and co-operative efforts are facilitated by associate committees and by means of assisted researches and scholarships.

The Council proper consists of fifteen members selected from men prominent in scientific and industrial work in Canada. They are appointed by the Governor in Council on the recommendation of the Committee of the Privy Council on Scientific and Industrial Research under which the National Research Council operates. The Minister of Trade and Commerce is Chairman of this Privy Council Committee.

The National Research Council meets four times a year to review past work and plan future projects.

The technical staff is organized in four laboratory divisions, each under a director and each responsible for investigations that fall into the categories suggested by the division titles, which are: Biology and Agriculture; Chemistry; Mechanical Engineering; and Physics and Electrical Engineering. Co-operation between divisions is easily arranged and a group of workers with a wide variety of training and experience can be quickly assembled to work on any problem that arises.

In order to provide for the better collection, collation, and issue of scientific information and the general planning of co-operative investigations through committees, a Research Plans and Publications Section has been organized, the Officer-in-Charge reporting to the President direct. This Section has charge of the library and is responsible for the *Canadian Journal of Research* issued monthly by the Council.

\* Prepared in the Research Plans and Publications Section of the National Research Council, Ottawa.

There is also a Codes and Specifications Section which is chiefly concerned with the work of the Canadian Government Purchasing Standards Committee and the National Building Code.

Administrative services are under the direction of the Secretary-Treasurer.

Since the beginning of its activities, the National Research Council has recognized the importance of utilizing the technical knowledge and directing ability of scientific men in universities, in other government departments, and in industry. A means of utilizing the services of these men has been found in the system of Associate Committees.

**Associate Committees as a Means of Co-ordinating Research.**—Associate Committees are composed of representatives of institutions interested in certain fields of investigation, specialists of interested Dominion Government Departments, and members of the Research Council staff. It is the function of these committees to direct co-operative research on problems assigned to them, to determine which individuals and laboratories are to undertake the components of the program, to settle the objectives, and to co-ordinate the results obtained.

Committees are organized in answer to a stated need. For example, the Associate Committee on Forestry was organized in 1935 after a joint meeting of the Canadian Society of Forest Engineers and the Woodlands Section of the Canadian Pulp and Paper Association had pointed out that, while a number of organizations were engaged in forestry research, there was a need for some means of co-ordinating and harmonizing the investigations and the results obtained. At this meeting a resolution was passed asking the National Research Council to undertake the task of co-ordination. A conference of all organizations interested in forestry research in Canada was called to discuss the matter, and as a result of its deliberations and decisions the Associate Committee was set up. Since that time the various organizations represented on the Committee have worked in close co-operation in the planning and execution of work. The Dominion Forest Service has continued work in site classification, forest tree breeding, forest fire control, and so on, for which its staff is peculiarly fitted. Other organizations connected with the Committee supply their services where necessary. For example, in the Council's laboratories, work on the use of plant hormones in the rooting of cuttings, on apparatus for the determination of degree of fire hazard in the forest, on the testing of fire-fighting equipment, and on certain radio problems, has been conducted with the advice and guidance of the Committee.

The Associate Committee on Grain Research originated in 1926 as a joint organization of the Dominion Department of Agriculture and the National Research Council. Its membership now is representative of these organizations and of the Universities of Alberta, Manitoba, and Saskatchewan, McGill University, and the Board of Grain Commissioners for Canada.\* There is not a single laboratory in Canada, concerned in any way with the quality of Canadian grain, that has not at some time co-operated with the Committee. Close relations have been developed also with grain laboratories in other countries. The independence and special qualifications of the personnel of this Associate Committee and the wide scope of the facilities of the co-operating laboratories have given it a well-deserved reputation as an authoritative body on questions of grain quality. Opinions of this body have

\* For details of the research activities of the Board of Grain Commissioners, see pp. 990-992.

been sought on important matters by the Dominion Government, the Board of Grain Commissioners, the National Barley Committee, the Northwest Grain Dealers' Association, the Wheat Pools, and other organizations.

Fundamental investigations on grain problems have been, for the most part, initiated and carried out independently by the co-operating laboratories, but there has always been full and frank discussion of all projects, plans, and results with other members of the Committee. By this means co-ordination without restriction of initiative, and organization without hampering individual freedom of action have been achieved. To date, 175 scientific papers have been published under the ægis of the Committee. Among the matters investigated by the co-operating laboratories, often with financial assistance from the Committee, are drought hardness of cereals, quality of wheat grown on wooded soils, seed injury by fungicidal treatments, prevention of heating of damp grain in storage, proteins and diastase of barley, influence of weather conditions on growth and yield of wheat, and factors influencing the carotene content of wheat.

The Associate Committee on Grain Research co-operates closely with the Associate Committee on Field Crop Diseases, which is interested in the development of high-quality disease-resistant varieties of grain. The latter body deals with the production of the varieties, but collaborates with the former on problems of quality. To provide for this collaboration these Committees meet concurrently once annually, and arrangements are always made for consultation between the plant breeders of the Associate Committee on Field Crop Diseases and the members of the Associate Committee on Grain Research, on all matters affecting the quality of newly developed varieties. By this means it is possible to prevent the economic waste that would result from the distribution to growers of varieties whose commercial qualities might not be of the high standard desired, even though their agronomic qualities were satisfactory. The combined efforts of these two Committees have resulted in the production of the high-quality rust-resistant wheats that are available in Canada to-day.

The work of the committees mentioned so far has many subdivisions, each with its specific interest, and consists of a series of steps, each of which prepares the way for a further advance; in other words their program is one of gradual and continuous development of the field for its scientific as well as its practical value. Other committees have had tasks that had from the first a specific program and one specific objective. An outstanding example of this type of organization was the Associate Committee on Trail Smelter Smoke.

This Committee was formed as a result of a request by the Department of External Affairs that the National Research Council investigate the damage said to be done to crops in Stevens County, Washington, U.S.A., by sulphur dioxide fumes from the stacks of the plant of the Consolidated Mining and Smelting Company at Trail, B.C. Claims aggregating many millions of dollars had been entered. The Government of the United States took up the matter with the Dominion Government, and the problem became one of determining the facts to be put before an international tribunal. The evidence having been collected and presented, the Committee was disbanded after a decision had been made in 1937. Before dissolution, however, the Committee collected the results of this, the most comprehensive study on the subject ever undertaken, in book form, under the title "The Effect of Sulphur Dioxide on Vegetation".

At present there are in existence, in addition to the committees already mentioned, committees on aeronautics, asbestos, coal classification and analysis, fire-

hazard testing, fish culture, gas research, hydraulic research, industrial radiology, laundry research, leather research, magnesian products, medical research, metallic magnesium, radio research, storage and transport of food, survey research, transshipment of perishables, wool, and other subjects. Co-operation with outside organizations is maintained through each of these, so that the Council has active contact with almost every scientific laboratory in Canada whether in a university, a Provincial or Dominion Government Department, or a private organization. The benefits to the progress of research within and without the Council's own laboratories are obvious.

**Financial Assistance for Research.**—In the development of co-operative research it frequently becomes necessary to give some financial assistance to a co-operator whose abilities should be utilized, but whose laboratory is insufficiently equipped with special apparatus, or who requires additional personnel for the proposed work. For this purpose the National Research Council has devised a system of grants known as assisted research grants. These are available only to persons who are recognized as capable research workers and whose laboratories possess the fundamental apparatus for the type of work to be done. The grants are made only for the purposes of investigations approved by the Council, and may be used only to purchase special apparatus and to employ assistants whose training and experience are regarded by the Council as satisfactory. These grants have resulted in much valuable scientific investigation by workers in Canadian universities, at a minimum of cost to the country. They have enabled the Council to assist qualified scientists whose services could not have been utilized without the financial assistance, in many cases quite small, that was supplied. In addition, research has been stimulated, particularly in the smaller institutions and those with limited financial support. This in itself adds materially to the scientific strength of Canada.

Another means of assistance to the development of science and technology in Canada is found in the Council's system of scholarships. These are awarded to students of high attainments to enable them to proceed with training in research in approved research laboratories under investigators of proved ability. The scholarship holders must engage in actual research, and their work as students, while equipping them for careers in scientific work, adds to the general store of knowledge and assists the investigators with whom they are associated to contribute to Canada's research effort. Many of the posts in research in Canada to-day are being held with distinction by scientists to whose training National Research Council scholarships contributed in no small degree.

**Research Carried on by the National Research Council.**—In this article it is not intended to list in detail the investigations that have been completed or are under way, but to give a few examples, chosen arbitrarily, to provide a picture of types of work undertaken.

Investigations dealing with storage and transportation of food have resulted in improvement of the methods of pre-cooling and packaging poultry. Maintenance of the quality of poultry held in cold storage has been assured by means of new developments in packaging the poultry and by humidifying the freezers. Considerable success has been achieved in efforts to improve railway refrigerator cars; remodelled and new cars designed as a result of this work are now in operation. Other investigations along this line deal with the development of automatic heater controls for refrigerator cars. A comprehensive study of the steps in the preparation of bacon for the export market has been carried on with the co-operation and support of the Dominion Department of Agriculture and the packing industry. This

study has uncovered a number of promising ideas for improving the quality and the uniformity of this important export product. Investigations aimed at improving the quality of beef, mutton, and pork are also being conducted.

Plant breeders in various institutions have added much to the wealth of Canada by developing new varieties. When the variety must meet specific environmental conditions, the tests may be made in the field or greenhouse, but tests of quality for certain market requirements demand laboratory facilities and accurate methods of measurement. The development of means of testing grain, such as wheat for its milling value and barley for malting, has received attention in the Council's laboratories, and the results have been of marked value to agricultural industry. This work has also received support from industry and from the Dominion Department of Agriculture, and has been stimulated by means of the close co-operation achieved through the medium of the Associate Committees on Field Crop Diseases and on Grain Research.

An inexpensive means of synthesizing certain plant hormones, and the discovery that these substances encourage root formation in some varieties of tree cuttings that normally root with difficulty are recent developments of interest to foresters. In addition, a program of tree breeding is being carried on in co-operation with the Dominion Forest Service, the requirements of commercial forestry, the farm woodlot, and the shelter belt being kept in view. In another field of plant breeding, work is proceeding, in co-operation with the Dominion Department of Agriculture, toward the development of a Western Canadian forage crop that possesses drought-resistance, soil-binding properties, and large seeds. For this purpose wheat has been crossed with the Agropyrons or wheat grasses. Interesting progress in this field has been achieved by doubling the chromosome numbers in hybrids by use of colchicine.

In the textile field extensive work has been done on industrial problems such as the damage done to wool by alkalis with which it is in contact during the scouring and milling operations. In co-operation with the University of Alberta and the Dominion Department of Agriculture, work is proceeding on the effect of environment and nutrition on the growth of wool, and a sheep-breeding program for fleece improvement is also being carried on. Studies of the means of testing such qualities of textiles as fastness of colour, water absorbency in towels, and the development of specifications for many types of textiles are other phases of the work. The cleaning of textiles is also being given attention, with the close co-operation of the laundering and dry cleaning industry. In this work the Council's laboratory provides periodic checks on the efficiency of 120 commercial and institutional laundries.

The work of the magnesian products laboratory has enabled the industry to develop to such an extent that the yearly payments to the Canadian railways for freight on products from the co-operating companies' plants in recent years have been almost as great as the total sum spent on these investigations in 13 years. Among the developments in this field are stable dolomitic materials and calcium silicates of high refractoriness. A type of brick that has extremely great resistance to fracture when subjected to rapid temperature changes was developed in the laboratory, and has been manufactured for several years in England, and will now be made in Canada also. A chemically bonded, unburned brick, developed in the laboratories is widely used in Canada, and is being exported to many foreign countries.

In aviation, in addition to considerable testing of fuels and instruments and the calibration and repair of instruments, researches are conducted on design and performance of aircraft and their component parts, such as engines, wings, and skis, and on engines and fuels. The effects of such factors as wind and gradient or current on the take-off of land and sea planes have also been investigated.

Apparatus for the study of vibration in aircraft has been constructed and tested in trial flights, and is expected to be valuable in helping to overcome high-frequency vibrations and wing-tip flutter, which have been troublesome and, on some occasions, dangerous.

A small model of a wind tunnel such as is used for aeronautical tests has been designed for the investigation of problems in soil drifting. A model-testing basin is available for the study of problems in the design of floats or ships' hulls. The results of these studies are valuable to designers of naval or commercial vessels.

In addition to research in the above specified fields, a large number of miscellaneous investigations have been carried on.

The asbestos industry has co-operated with the Council in laboratory investigations aimed at the improvement of quality, the testing of the raw and processed material, and the development of new uses for asbestos.

Casein, an agricultural product, has been studied in the Council's laboratories with a view to the preparation of high-quality raw material for the manufacture of coatings, water paints, insecticides and other preparations. The laboratories have investigated problems raised by corrosion of equipment used in various industries.

Among other studies of interest to industry are: the investigation of means of utilizing a recently discovered Canadian source of brucite, a hydroxide of magnesium; the development of highly efficient packings for fractionating columns and scrubbing towers; and use of an adhesive for bonding rubber to metals, particularly aluminium.

Cathode-ray direction-finding equipment for aircraft and marine use has been steadily improved. Marine equipment recently constructed near Halifax will facilitate the taking of bearings by pilots from fixed land stations, and by fixed stations from ships. Observations in atmospherics have been made at two Canadian stations in synchronism with a station in Puerto Rico and another in Florida.

In the X-ray Laboratory, thousands of articles are examined by X-ray methods, prominent among which are alloys, castings of various metals of importance in industry, and pressure cylinders. Methods of standardizing the examination of such materials are being studied and developed. Instruments for the measurement of radium content have been constructed and, in the year 1938-39 alone, radioactive materials to the value of approximately one million dollars were measured.

Considerable attention has been devoted to equipment for aerial photography in the interests of aviation, forestry, and surveying; the designing and construction of a light-weight camera, and the testing of negative material for survey operations are examples of the work done. Suitable light for colour grading of furs and other products is important in industry, and the laboratories are experimenting with means of producing artificial daylight for such purposes. An impulse generator capable of developing instantaneous potentials up to one million volts has been constructed for the testing of high-voltage insulators for power-transmission lines.

The examples cited above are, as has already been stated, merely a few chosen to illustrate the type and scope of the investigations undertaken in the laboratories. Little mention has been made of routine testing, although a large proportion of the time and energy of many members of the staff is devoted to that type of work.

**Subsection 2.—Research in the Departments of the Dominion Government.****THE DEPARTMENT OF AGRICULTURE.\***

Since the beginning of the twentieth century there has been a remarkable change in the relation of the farmer to the scientist. The scientist has taken his critical methods to the fields; the farmer has brought his problems to the laboratory. To apply the laws of science to the practices of agriculture is the function of the research and experimental services of the Dominion Department of Agriculture. Highly trained specialists are continuously at work carrying research projects through various stages of analysis in the laboratory, and through testing under controlled conditions in stable, greenhouse, and experimental plot. Finally the products of their research are tested under practical farming conditions throughout the area concerned.

There is no one science of agriculture; it is made up of many sciences. The tillage and fertility of soils, the growth and protection of plants, the feeding and care of animals, and the processing of farm products into human food and clothing present problems that the research worker solves by reference to the laws of a score of sciences. Because of the great diversity of effort required in reaching a practical solution, research on many problems is not confined completely to any one unit of the Department of Agriculture. The major part of the research work, however, is conducted in the Divisions of the Science Service and the Experimental Farms Service. Units of these two services are located in every province. The research work of the Department is co-ordinated with that of the agricultural colleges and the National Research Council, and there is an interchange of personnel and facilities wherever the work will be benefited.

**Research on Soil Problems.**—The basis of profitable farming is the maintenance of soil fertility. In a young country, the store of fertility accumulated over centuries of soil weathering and plant and animal decay is tapped by the first few generations of farmers. After the virgin soil has been partially exhausted of the mineral constituents that are used by the growing plant, the farmer's troubles begin to multiply. The vigour of the plants is lowered, crop yields decline, and weeds, diseases, and insect pests increase.

The soil surveyor, who maps the areas covered by various productive and unproductive types of soils, furnishes basic information from which the economist and the administrator are able to evolve land utilization policies for future settlement, or for the rehabilitation or abandonment of areas that are now in distress. This type of work is under way throughout the Dominion in co-operation with the provinces, and has reached an advanced stage in several areas.

The soil chemist and the field-crop specialist are able to determine the kind and amount of plant food needed for various crops on various soils, and to recommend fertilizers that will produce profitable crops. The manufacture of commercial fertilizers has been greatly improved through the research work of the chemist, and regulations controlling the content of fertilizer mixtures have been drawn up and are administered by the Department for the protection and benefit of the farmer and the manufacturer.

Studies in plant nutrition conducted by the Department have ascertained the causes and the methods of prevention of many obscure diseases. For example, although as early as 1857 boron was known to be present in plants, it is only within

---

\* Prepared in the Department of Agriculture.

the past decade that its importance in plant nutrition has been realized. It is now known that almost all farm crops require minute quantities of boron in the soil, and diseases such as brown heart of turnips, corky core and drought spot of apples, dry rot of sugar beets, and cracked stem of celery may be prevented by its use. There is now research in progress to discover whether the addition of too much boron to the soil reduces the keeping quality of the fruit. Other deficiency troubles are known to be caused by lack of zinc, manganese, copper, sulphur, and magnesium.

Horticulture has been greatly benefited by recent researches in plant physiology. Through characteristic effects on the plant foliage, it is now possible to diagnose potassium and magnesium deficiencies with practical benefit. The balance between certain mineral plant foods has been demonstrated; an excess of nitrogen may be corrected to a degree by the addition of potassium, but an excess of calcium or of phosphorus can interfere with the utilization of potassium. A practical application of research in plant nutrition is found in the new greenhouse culture whereby plants are fed nutrients in solution. These methods remove numerous difficulties inherent in the use of soils and composts, and it may be that a large part of the greenhouse crops will soon be grown under these conditions.

The bacteriologist is concerned with the living organisms in the soil that bring about changes in soil fertility. Certain bacteria cause decay of vegetable matter or humus, thus making plant food available, and other bacteria that live in close relationship with leguminous plants assist in extracting nitrogen from the air for the use of the growing crop. Pure cultures of bacteria for the inoculation of legumes are maintained, and the Department exercises certain control measures over the commercial distribution of cultures.

Not all bacteria in the soil are beneficial. Some of them cause plant diseases, and some, on the other hand, produce substances that assist in controlling plant diseases. A program of research is conducted by bacteriologists and plant pathologists dealing with specific points involving the relationship of plants to soil organisms, particularly to soil-borne diseases such as root-rots of cereals, tobacco, and garden crops.

In recent years great improvements have been made in the efficiency of tillage implements and methods of culture. The laws of physics play an important part in the management of the soil and in the designing of tillage instruments. New instruments are constantly being designed and thoroughly tested by the Department. Soil drifting conditions are studied in a specially designed wind tunnel.

**Research on Crop Production.**—Man improves upon nature, not only by careful management of the soil, but also through the selection of the seed or stock from which the crop is produced. Modern practices require that seed must be pure, free from diseases and insects, and of high vitality. Regulations regarding the grading and distribution of seed are based upon careful research work, confirmed by field trials, and finally drafted into laws that are administered by the Department.

More fundamental than the appearance and vitality of the seed, however, are the inherited factors carried in the germ of the seed. The natural law of the survival of the fittest produces hardy strains of plants whose main characteristic is their ability to survive and not their usefulness to man. The plant breeder takes the most useful strains that have been developed by natural selection, and by artificial selection he improves the yield and quality of the crop. The botanist searches Canada and other parts of the world for suitable hardy varieties to form

the basis of improved varieties; the geneticist and the cytologist study the factors of inheritance that may be transmitted by these strains, and combine them with existing domesticated strains to produce improved varieties. Plant breeders at work in the Department are engaged in producing improved varieties of all types of field and garden crops. The great diversity of climate in Canada makes it necessary to have many varieties capable of producing satisfactory crops under varying conditions of soil, temperature, light, and moisture. For example, in order to produce a better Western Canadian forage crop, wheat is being crossed with *Agropyron* species of grasses. A variety that may prove highly desirable in one area may be quite unsuitable in another.

Marquis wheat has had a world-wide reputation for many years among the field-crop varieties produced by this Department. Unfortunately, this variety is susceptible to injury and destruction by black stem rust. In recent years, the plant breeders, with the assistance of the plant pathologists, have produced new high-yielding, rust-resistant varieties, and are continually searching for resistant varieties of still higher quality. The two outstanding features of the cereal-breeding work conducted by the Department are the contribution of genetics in guiding plant breeders in the production of varieties with the required characteristics, and the discovery by plant pathologists of the physiologic races of stem rust. About one hundred and fifty of these physiologic races of wheat stem rust have been discovered. Some are regional in distribution, some injure certain wheat varieties more than others, and some occur in one season and not in others. New races are discovered from time to time. It has been necessary therefore to study the characteristics of these physiologic races of rust, and to breed varieties of wheat resistant to all of the races that might affect the crops in the area concerned. This example is a striking illustration of the work of plant breeders and plant pathologists in producing agricultural plants resistant to diseases. Remarkable success has been achieved in a number of instances, and there is now the possibility that many plant disorders may be eliminated through the production of disease-resistant varieties.

Many diseases may be controlled by the application of fungicides. Researches that have been conducted over a period of years now make possible the publication of spray calendars for the control of diseases and insects, indicating to the farmer the time of spraying, condition of crop, and type of spray that must be applied to secure economical results. Regulations have been drafted and are now in force to further the production of strains of potatoes free from disease, and this work is being extended to seeds of cereal and vegetable crops.

The control of insect pests is one of the main problems that come with intensified farming. Forest insects, which present an enormous problem, also come under the purview of the Department. A protective service is maintained to prevent the introduction of foreign pests into Canada.

Control measures, developed by entomologists and chemists, include the use of contact sprays, poisons, and repellents. Thorough research on the life histories of insects also reveals the possibility of control by cultural methods. Entomologists and agronomists of the Department have worked out changes in methods of tillage, dates and rates of seeding, rotation of crops, and other cultural details that permit of an attack on the weakest link in the life history of the insect concerned. Cultural methods of control are of great importance in connection with crops grown on an extensive scale where poisoning and contact sprays would be uneconomic. A recent development that holds much promise is control by the use of parasites and predators. Stocks of parasites are multiplied in a laboratory maintained by the Department and released in areas where certain insect infestations are in progress.

By such biological methods, satisfactory results have been obtained in the control of several important insects, including pests of both farm and forest.

**Research on Animal Production.**—An increasing proportion of the field crops grown in Canada is being fed to live stock. Domestic animals are fed on natural and cultivated pastures, and on grasses and other crops harvested for winter feeding. The winter rations may be supplemented by the use of highly processed feeds containing the necessary minerals and vitamins to take the place of the sunlight and natural feed obtained during the summer months.

The animal husbandman, with the aid of the chemist, is constantly seeking for improved methods of feeding in order to produce strong, healthy live stock of the proper market type. The increased production of milk, eggs, and other animal products places a great strain on the constitution of domestic animals. The large amount of materials required by the animal body to produce human foods makes it necessary that the ration for the domestic animal contain much larger amounts of food constituents than is the case under natural conditions where production is limited. A balance must always be preserved between the ability of the animal to consume rough foods that are turned into human foods, and its disposition to remain in normal health and to produce economically. This raises research problems that require the utmost skill of the animal husbandman and the chemist.

The animal breeder is constantly on the search for improved blood lines that may be used in raising the standard of quality of the live stock throughout the Dominion. Careful recording of the performance of herds and flocks under the control of the Department, and studies of the best strains available from other sources, are functions of the animal husbandman and the geneticist. New breeds of live stock cannot be produced as rapidly as new strains of crops, and the improvement of existing strains is the main endeavour at present. An effort is being made, however, to develop new strains of sheep, swine, and poultry; this may eventually result in the establishment of breeds most suitable to Canadian conditions.

Research that has as its object the establishment of the most efficient means for the control and prevention of animal diseases is carried on continuously. Priority is given to diseases of major economic importance in the breeding and production of the various classes of live stock, poultry, and fur-bearing animals. Intensive research is made into the nature, causes, and effects of the more specific infectious diseases, their sources and tributaries, modes of transmission, reservoirs, carriers, and intermediary hosts. The possibilities of vaccination and immunization are explored and developed. Pathological determinations and laboratory tests, isolation and propagation of causative organisms and viruses, the preparation of diagnostic reagents, vaccines and serums, animal inoculations and experiments, are all included in these exacting studies and tests. In addition, studies are in progress relating to the occurrence and control of internal parasites preying on farm animals.

Regulations govern the manufacture in Canada and the importation of serums, vaccines, and similar products, some of which are prepared at the Departmental laboratories. All these products are subject to safety and efficiency tests. Quarantines, regulations, and standard methods, based on research and administered by officers of the Department, assist in controlling established diseases and in preventing the introduction of destructive diseases common to many other countries.

**Research in Processing and Marketing.**—As a basis for the framing of effective regulations concerning the interprovincial and export movement of farm

products, research is undertaken on methods of processing, storing, and transporting human and animal foods. The marketing of perishable foods, such as fruit and vegetables, butter, cheese, eggs, honey, and meat, continually presents new problems that demand solution in the best interests of producers and distributors. The recent development in the production and marketing of apple juice made from surplus apples is an example of this type of work.

Great advances have been made in the cold storage of fruits and vegetables, and the recent use of gas storage, discovered in Britain after research in the respiration of fruits, is being applied in this country to Canadian varieties in relation to commercial requirements. Definite progress is being made in maturity studies of fruits, problems of dehydration, and the preservation of fruit juices. Morphology and bacteriology are guiding the application of freezing processes used in the preservation of various agricultural products.

The present-day system of handling milk and dairy products is almost entirely the result of knowledge based on research in bacteriology. The establishment of modern methods is based on painstaking investigation on the physiology of micro-organisms, and the application of this knowledge to practical problems. The researches into methods of evaluating milk and dairy products have become as important as the hygiene of milk production. Bacteriological research has effected a marked change in the conception of food utilization.

Economic research relating to farm management and marketing is also a function of the Department. It is not the intention to increase production without regard to consumer preferences and potential markets. The maintenance of production on an economic basis in well-established farming areas is necessary to prevent the decline and abandonment of such areas with the consequent dislocation of community and national services. Agricultural research is aimed at lowering the cost of production and maintaining a continuous flow of high-quality products to available markets. This service is absolutely necessary for the maintenance of a well-balanced Canadian economy.

#### THE BOARD OF GRAIN COMMISSIONERS LABORATORY\* (DEPARTMENT OF TRADE AND COMMERCE).

The rapid development of grain production in Western Canada during the first decade of the present century led to the passing in 1912 of the Canada Grain Act. Provision was made for administration of the Act by a Board of Grain Commissioners who were thus made responsible for control of the transportation, weighing, grading, and warehousing of Canadian grain. The Board soon encountered problems that required scientific study and a Grain Research Laboratory was established in 1913.

The Laboratory, which now employs a permanent staff of seven chemists and twelve assistants, comprises a sample-receiving and moisture-testing room, mill room, baking laboratory, macaroni laboratory, optical laboratory, constant temperature room, balance room, nitrogen laboratory, two general chemical laboratories, a small work shop, and various store-rooms and offices.

**Studies Undertaken at the Laboratory.**—Each year the Laboratory provides certain information required by the Board for the administration of the Canada Grain Act. During August and September the quality characteristics of the new crops are determined by the study of numerous individual and composite samples. The Laboratory then collaborates with the Inspection Branch in preparing the

\* Prepared in the Board of Grain Commissioners Laboratory, Winnipeg.

tentative standard samples of each grade, which are submitted to the Western Committee on Grain Standards. When the standards are set, their quality characteristics are determined and a report is released by the Board for the information of prospective purchasers of Canadian grain. Throughout the remainder of the crop year, the Laboratory continues to collect and test samples of various crops in order that the Board may have information on the current quality of grain in storage and in transit, and a final record of the quality of all grain shipped during the crop year. Annual records are prepared showing the variations in the quality of wheat produced in different districts, inspected at different points, unloaded in different elevators, and shipped from different ports. Information is also provided on the variations in quality both within and between grades, at monthly intervals during the crop year, and at various stages of the movement from producer to consumer. Similar though less extensive records are kept for durum wheat, barley, flax, oats, and rye.

The Laboratory also tests numerous individual samples, the grade or quality of which has been questioned by a producer, inspector, or purchaser. A fairly steady demand exists for wider investigations relating to day-to-day grading problems; the effects of artificial drying, frost damage, bleaching, bronzy-green kernels, immaturity, and taints, on milling and baking quality are given careful study. About half the Laboratory's time is given to more fundamental research comprising investigations designed to improve and standardize laboratory methods used in assessing the quality of cereal grains, and comparative studies of the quality characteristics of different varieties and of grains grown under different environmental conditions are also carried on.

Most of the major investigations undertaken form part of a broader program of studies formulated and directed by the Associate Committee on Grain Research of the National Research Council and the Dominion Department of Agriculture, on which the Board of Grain Commissioners is represented by two members of the Laboratory staff. As a result of this work a very considerable body of reliable information has been collected on the milling and baking characteristics of Canadian varieties of wheat and these have been classified with respect to quality, and thus with respect to the commercial grades for which they are eligible. Moreover, there has been steady improvement and development of the methods used for assessing quality both on a macro- and a micro-scale, and a concurrent expansion of the services given to Canadian plant breeders by testing their new hybrids and selections.

In 1932 the attention of the Associate Committee was drawn to the need for research on the macaroni-making quality of durum wheat. A grant was made for the purpose of initiating a program of investigations in that field and such investigations have been carried on at the Laboratory since 1933.

The Board has at its disposal a laboratory that is better equipped for investigations of the macaroni-making quality of durum wheats than any other laboratory on this continent. Through the co-operation of the Department of Agriculture, considerable progress has been made in determining the macaroni-making qualities of established varieties of amber durum wheat, and in determining the effects of environment on these qualities. Improvements in the equipment and methods used in the durum laboratory are being sought continuously. At present, particular

attention is being given to the development of more satisfactory micro-tests for small samples of new hybrids and selections.

For some years the Laboratory has also been the principal Canadian centre for research on oil seeds. Attention has been given to the development of rapid methods for the determination of the oil content and iodine value of flaxseed, so that, should flax production reach an appreciable commercial volume in Canada, it will be possible for the Board to put the grading of the crop on a quantitative basis. Several other oil seeds have also been studied, including soybeans, safflower, "*Peritome serrulata*", and sunflower seeds, all of which have certain commercial possibilities for the production of both drying and edible oils.

#### THE DEPARTMENT OF MINES AND RESOURCES.\*

Various types of scientific and industrial research are carried on in the different branches of the Department of Mines and Resources. The Mines and Geology Branch and the Lands, Parks, and Forests Branch are in direct administrative contact with two of the most important industries in Canada, and undertake a large proportion of the research carried out in this Department, with the object of achieving the more efficient development and utilization by industry of the products of mine and forest. The Bureau of Geology and Topography, the National Museum, and the Dominion Observatories carry out research in their respective fields. The Bureau of Northwest Territories and Yukon Affairs carries out research on wild life in the Northwest Territories, while the National Parks Bureau, in connection with the administration of the Migratory Birds Convention Act, carries on research in ornithology and also studies the factors affecting the fish and game populations of the National Parks.

**Bureau of Mines.**—The rapid growth of the mining industry in Canada has resulted in an increased demand for information relating to the mineral resources of the Dominion. The Bureau of Mines, through its various divisions, is making an effort to correlate and make available to industry and to the public all information pertaining to these mineral resources. This work has been greatly facilitated by the recent erection of new laboratories that are equipped to carry out extensive investigations and tests of minerals and their products. At present the following laboratories are maintained: the Ore Dressing and Metallurgical Laboratory, the Fuel Research Laboratory, and the Ceramic and Industrial Minerals Laboratory.

*Ore Dressing and Metallurgical Laboratory.*—The Ore Dressing and Metallurgical Laboratory, Ottawa, is fully equipped for such mineralogical, physical, chemical, mechanical, and metallurgical investigations, tests, and researches as are found necessary: to determine the characteristics and methods of treatment of Canadian ores; to improve plant practices; increase recoveries and improve the quality of metallic products; and in general to aid the mining and metallurgical industry of Canada.

Research work is carried out on both ferrous and non-ferrous metals. The Ferrous Metal Laboratory is equipped for the production and testing of alloy steels and allied products and to be of service to firms that either manufacture or use metals and metallic alloys.

---

\* Prepared in the Department of Mines and Resources.

*Fuel Research Laboratory.*—At the Fuel Research Laboratory, Ottawa, investigations are carried out on solid, liquid, and gaseous fuels with the purpose of promoting more extensive and more efficient use of the fuel resources of the Dominion. Research and investigative work is being done on the classification and physical and chemical properties of coals, coal washing and beneficiation, carbonization and briquetting; on petroleum, bitumen, natural gas, and on the hydrogenation of various fuels for the production of motor fuel and other petroleum products. Equipment permits large- and small-scale coking tests on coals as well as the determination of the relative heating values of various fuels.

*Ceramic and Industrial Minerals Laboratory.*—In the Ceramic and Industrial Minerals Laboratory, Ottawa, facilities are provided for investigative research and tests on the non-metallic minerals, principally those used in the building, chemical and metallurgical, and ceramic industries. The investigations deal with the winning, marketing, uses, crushing, and grinding of minerals, and with problems of processing in the manufacture of mineral products, particularly of those materials used in the ceramic industries. In the latter case, the work is directed chiefly to improving the processing in the clay-working industries and in assisting operators to overcome their technical difficulties.

*National Museum.*—The National Museum, singly or in co-operation with other governmental departments, universities, and private organizations, conducts research in the natural sciences, chiefly anthropology—to elucidate the history of the Canadian aborigines—and biology (mammals, birds, insects, aquatic and other animals, botany, forestry) for educational purposes and for the application of these sciences to industry and conservation.

*Bureau of Geology and Topography.*—Through the Bureau of Geology and Topography, geological, topographical, and related work is undertaken to further the knowledge of the geology and geography of Canada.

*Geological Survey.*—The Geological Survey makes studies and investigations in geology, mineralogy, and palæontology in order to obtain systematic information regarding the geology of Canada and to aid in the discovery and development of her mineral resources.

*Topographical Survey.*—The Topographical Survey, in the course of its regular work, conducts research on methods, materials, and instruments for preparing maps both from aerial photographs and ground surveys. The co-operation of the National Research Council is obtained in certain phases of this work that involve actual constructions.

*The Dominion Forest Service.*—The Dominion Forest Service operates five forest experiment stations with a total area of 238 square miles. Here investigations of the underlying principles governing the growth of forests can be made and practical methods of management are tested. The first of these stations was established at Petawawa, Ont., in 1918. The Forest Products Laboratories were organized in 1913 with the object of keeping Canada abreast of other countries in scientific developments in wood utilization.

*Forest Economics.*—Latest available information regarding the forest resources of the Dominion is collected and compiled by this Division. Data are secured both from special inventory investigations and from reports supplied by the Provincial Governments. The annual depletion in the forest due to cutting, fire,

and other causes is compiled, and information respecting the annual production of various forest products is assembled.

Inventory investigations are facilitated by the use of air photography. Large sections of Canada have been photographed from the air by the Royal Canadian Air Force and by private companies. The interpretation of these photographs has been developed by a special technique to the stage where it is possible not only to plot the various timber stands but to estimate with considerable accuracy the volume of standing timber.

*Silvicultural Research.*—Research in the field of silviculture is centred in the five forest experiment stations located in New Brunswick, Quebec, Ontario, Manitoba, and Alberta, but supplementary studies are conducted in other areas in co-operation with the provinces and industry. The main objectives are: to determine and demonstrate the best methods of treating existing young timber stands that have come in naturally after cutting or fire, and to devise systems for the cutting of mature stands so as to ensure natural regeneration of the more desirable species. Intensive studies are made on small sample-plots and then the results are applied to larger areas more representative of commercial operations. The experiments include improvement cuttings in which undesirable species and defective trees are removed, thinnings to promote growth, and pruning to improve the quality of the wood. Records of costs and of the revenue from the sale of timber removed are kept in order to determine the financial practicability of applying these methods to commercial operations.

*Forest Fire Protection Research.*—Research in forest fire protection is conducted at the forest experiment stations and in co-operation with the provinces and the National Research Council. Annual statistics of forest fire losses are compiled from returns submitted by the provincial authorities, and the efficiency of new equipment and methods used for combating forest fires are investigated.

The outstanding accomplishment in this field has been the development of a system for the daily measurement and forecasting of forest fire hazard. This system, developed from studies begun in 1929, is now used throughout Quebec and New Brunswick. In each region intensive research into the factors influencing fire hazard must be undertaken. Field investigations are now being conducted in the western provinces with a view to applying this system in those regions.

*Forest Products Research.*—This branch of research is carried on at three laboratories. The main Forest Products Laboratories are located at Ottawa. All phases of wood utilization are dealt with except those relating particularly to the manufacture of pulp, paper, and related products. The latter are conducted at the Pulp and Paper Laboratory at Montreal.

The Pulp and Paper Association, in addition to providing accommodation for research, makes a yearly grant to the Laboratories to assist in financing the work, and, through a Joint Administrative Committee consisting of representatives of the Government and the Association, takes an active part in formulating and forwarding the work of the Division. Close co-operation is also maintained with McGill University.

A third laboratory is maintained at Vancouver to deal with special problems in connection with the forest products of British Columbia.

Research projects in connection with timber mechanics, wood preservation, lumber seasoning, wood chemistry, timber pathology, timber physics, and wood

utilization are conducted at the Ottawa and Vancouver Laboratories; analysis and testing of pulp and paper, methods of mechanical pulping, chemical pulping, printing, and fundamental studies are carried on at the Montreal Laboratory.

Since the Laboratories were established, many advances have been made in the technique of wood utilization. Improvements have been made in treating railway ties, telephone poles, mining timbers, and other structural timbers with creosote, water-soluble salts, and other chemicals. This has enhanced the value of wood as a permanent structural material and permitted its use for a variety of purposes for which it is otherwise unsuitable. The work carried out in the treatment of hardwoods, especially birch, beech, and maple, has been of particular value. Reductions in the cost of manufacture of pulp and paper, and improvements in quality of products have resulted from researches of the Laboratories. Of particular interest has been the development in the Pulp and Paper Laboratory of the Canadian Standards Freeness Tester and the Johnston Fibre Classifier. Valuable work has also been carried out in the manufacture of groundwood pulp and in the pulping of resinous woods and hardwoods.

The study of the significance of discoloration in timber, as for example in jack pine, red cedar, and Douglas fir, has been responsible to a considerable degree for curtailing rejection of such material. Researches carried out in the spraying or dipping of timber, notably the sapwood of the pines, with chemicals that are toxic to wood-staining organisms have assisted in curtailing losses on this account, which in some years amounted to as much as one million dollars.

Through researches carried out in the Laboratories and at woodworking plants important advances have been made in seasoning, both in the open air and in experimental dry-kilns. This work has been particularly valuable in both Eastern and Western Canada in connection with export markets which are becoming increasingly critical of specifications. The work carried out has been of significance to exporters of both softwoods and hardwoods.

Mechanical and physical tests have been carried out on nearly all important Canadian commercial species of timber in accordance with the practices adopted by laboratories of countries of the British Empire and of the United States. A great deal of work has also been carried out on large structural timbers. This information has been used widely by Canadian engineers and by municipal authorities in the revision of building codes. It has also been made the basis for structural grades, for all species of Canadian woods of structural importance, which have been set up by the Canadian Engineering Standards Association. In logging operations in Canada a great deal of material such as limbs, small logs, defective logs, and species not ordinarily used commercially are left in the woods and wasted. At the sawmills quantities of bark, slabs, edgings, sawdust, and trim are consumed in refuse burners. The Laboratories are paying special attention to devising ways and means of curtailing this waste, and industry is becoming keenly aware of the importance of such work.

**The Bureau of Northwest Territories and Yukon Affairs.**—The conservation of the fur bearers of Canada is a matter coming under the jurisdiction of the respective Provincial and Territorial Governments. Nevertheless, the Dominion, as a whole, is concerned with the conservation of fur and of all wild-life resources. It was to co-ordinate the wild-life conservation efforts of the various Dominion Departments that the Advisory Board on Wild Life Protection was organized in 1916. The Board is specially authorized to advise with respect to the

administration of the Migratory Birds Convention Act and the Northwest Game Act, but has dealt with many other problems of wild-life conservation. Through conferences of provincial and Dominion officials, which were convened for many years by the former Department of the Interior but are now arranged by the Department of Mines and Resources, uniform and concerted action has been taken and the conservation of Canada's wild-life resources has been advanced. The general policy followed with regard to the fur-bearing animals has been mainly along two lines: (1) To so regulate the taking of animals by limitation of catch or close season as to prevent their extinction in districts where natural conditions provide a suitable habitat. (2) To provide sanctuaries in strategic places to serve as reservoirs from which large areas of surrounding country may be restocked naturally.

*Wild-Life Research in the Northwest Territories.*—Through the medium of questionnaires distributed annually, the co-operation of the resident fur traders and trappers and government officials is secured in making a continuous survey of wild-life conditions in the Northwest Territories. By this means data are obtained upon all forms of wild life, particularly those economically important to the natives, such as the caribou and the fur-bearing animals. This is referred to the Bureau of Animal Population, Oxford University, England, for purposes of scientific study.

In making this study the Department also secures information upon the lemming, ptarmigan, and snowy owl, which are subject to periods of abundance and scarcity in the same manner as the fur-bearing animals. The investigation also includes a study of the diseases affecting sleigh dogs. These animals are subject to a disease that periodically reduces their number to an extent that seriously affects the livelihood and economy of the native population.

The Institute of Parasitology, Macdonald College, Quebec, and the Bureau of Animal Population, Oxford University, England, are co-operating with the Department in carrying out the sleigh-dog investigation.

**National Parks Bureau.**—The Division of Wild Life Protection of the National Parks Bureau carries out migratory-bird and ornithological research work directed to the conservation of the bird and animal life of the continent.

*Migratory Birds.*—The National Parks Bureau of the Department of Mines and Resources, Ottawa, and the Fish and Wild-life Service of the United States Department of the Interior, Washington, D.C., are co-operating fully in the study of wild-bird migration routes and fly-ways, increase and decrease in numbers, concentration points, mortality rate, percentage of the take of game birds by hunters, longevity, and other problems related to the conservation of wild birds as a natural resource of great economic importance in North America.

These and other problems involved in bird conservation cannot be completely solved without the aid of certain precise data that can be obtained only by bird banding.

In Canada, the National Parks Bureau, which records and makes use of all data being accumulated in this way, has the voluntary co-operation of some two hundred ornithologists and conservationists who are marking hundreds of thousands of native wild birds with official bands, and this activity is yielding a great deal of new and useful information.

In addition to acting as a clearing house for Canadian banding records, the Division's staff does considerable banding in the field and has co-operated with research workers in the United States in a study of migrations of the Herring Gull by the use of coloured bands.

*Ornithology.*—A great deal of special research has been done on the life histories of birds that, because of their usefulness or destructiveness, are considered to be of economic importance, and on factors affecting the population of these important birds. The subjects embraced are: the reproductive rate of the Southern Eider Duck; eel-grass disease, and the introduction on the Atlantic Coast of eel-grass from the Pacific Coast; waterfowl food plants of the Precambrian Shield; effect of drought on waterfowl breeding grounds of the prairies; relation of waterfowl to sockeye salmon; relation of screech owl to agriculture; relation of the European gray partridge to agriculture; waterfowl disease in Alberta; cormorants and food fishes in Manitoba; food habits of hawks and owls; waterfowl and herring; the American merganser and fisheries; the red-breasted merganser and fisheries; food of the common mallard; the ring-billed gull in Alberta; food of the bald eagle; life history of the golden-eye ducks; relation between ducks and certain of their bird enemies; relation between ducks and coots; distribution of waterfowl; extent and productivity of nesting grounds; food resources of waterfowl; life histories of waterfowl; and relation of waterfowl to fisheries.

General topics studied are: the numbers and distribution of birds in Canada; the migrations of Canadian birds; phenomena of the manner of bird migration, particularly anemotaxis; the migrations of the white-bellied brant. Research has been carried on concerning the distribution of birds and mammals in the Canadian National Parks, factors affecting animal population in the National Parks, and factors affecting game-fish populations in National Parks.

**Research in the Dominion Observatories.**—The Dominion Observatory at Ottawa carries out research in the fields of solar physics, the photo-electric and photographic study of stars, seismology, magnetism, and gravity.

Research in solar physics includes a detailed study of the solar rotation, investigation of relations between the sun-spot cycle and temperature, rainfall, and vegetable and animal life, and other related subjects; incidentally a new generalized formula has been developed for the representation of the speed of solar rotation.

With the equatorial telescopes the work at present is mainly devoted to the study of variable stars by photo-electric and photographic methods; occasional work is done in direct photography and in spectroscopy.

Seismographs are maintained at Ottawa and at six subsidiary stations distributed from Halifax to Victoria, for the study of Canadian earthquakes and for international collaboration; one important problem is the measurement of the velocity of seismic waves under the Canadian Shield, with its relations to crustal phenomena and structure. Particular attention is being paid at present to the application of physical and seismic methods to the problem of rock-bursts in mines in northern Ontario.

Two magnetic observatories are maintained (at Agincourt, Ont., and Meanook, Alta.), to furnish a continuous record of magnetic declination and horizontal and vertical force; a magnetic survey covering the whole country is also carried on, repeat observations over a network of stations being made every five or ten years, for control of secular variation and its changes.

A gravity survey is in progress, and measurements of the intensity of gravity have been made at about 150 stations distributed throughout the more settled regions of the country; isostatic reduction of the available data shows that, in the main, the earth's crust in Canada is nearly in isostatic equilibrium, though important questions remain to be solved.

Research in the Dominion Astrophysical Observatory at Victoria, B.C., consists almost entirely of spectroscopic study of the stars carried out by means of the seventy-two inch reflecting telescope, with accessories consisting of spectrographs, cameras, etc.

Much attention has been paid to determinations of radial velocity, and the institution has the record of having determined more spectroscopic binary orbits than any other observatory. Among the other notable investigations are: determination of a large list of spectroscopic parallaxes; definite proof of the rotation of the galaxy and measurement of the resulting solar motion; confirmation of the widespread distribution of absorbing material in interstellar space; rotation of the line of apsides in spectroscopic binaries; measurements of the masses of binary stars; the distribution of variables in the globular clusters; investigations of Wolf-Rayet stars and novæ; and many other related problems.

#### THE DEPARTMENT OF FISHERIES AND THE FISHERIES RESEARCH BOARD.\*

**The Background of Fishery Research in Canada.**—The beginning of fishery research in Canada dates from the appointment in 1852 of Dr. Pierre Fortin as Stipendiary Magistrate. He was provided with a vessel, *La Canadienne*, for the protection of the fisheries in the Gulf of St. Lawrence. Dr. Fortin investigated and reported upon all the fisheries, described the various species, and inaugurated a system of annual reports, with detailed statistics of the catches, fishermen, and gear. This investigation was extended to the remainder of the Province and, after Confederation, to the other provinces as they came in, or were constituted.

Decrease in the catches of the valuable salmon was the incentive for the development, in the fifties and sixties of the 19th century, of methods of taking, fertilizing, and hatching their eggs (following similar work in other countries) as a means of replenishing the diminishing supply of this fish. Pioneer work was done more or less independently by Richard Nettle in Quebec, Samuel Wilmot in Ontario, and Stone and Goodfellow in New Brunswick. There came into being a system of fish culture carried on by the Government and extended during succeeding years to more and more species of fish.

Then came the idea of a biological or fishery station that might assist in the development of fish culture, particularly for marine species. In 1893 a scientist was obtained from Great Britain to take the new post of Dominion Commissioner of Fisheries. The movement for a scientific station or laboratory gathered force, and in 1898 the Government made a grant to a Board of Management of a Marine Biological Station, which was located for successive two-year periods at St. Andrews, N.B., Canso, N.S., Malpeque, P.E.I., Gaspe, Que., and Seven Islands, Que. In 1907 it was located permanently at St. Andrews, N.B. In the meantime the Georgian Bay Biological Station had been established at Go Home in 1901 to serve the Great Lakes fisheries but this station continued only until 1913. A Pacific Biological Station was established at Departure Bay, B.C., in 1907. The managing board was incorporated by Act of Parliament in 1912 as the Biological Board of Canada.

The Board consisted entirely of scientists, principally biologists from the larger universities, and the investigations were carried out by scientists from the universities, working at the stations during the summer and continuing at their institutions during the winter. The problems were those of the fishermen, dealing with the abundance of the fish, bait, etc. However, the War of 1914-18 gave a

\* Prepared in the Fisheries Research Board, Canada.

distinct impetus to fisheries research partly through interlocking between the Biological Board and the newly formed Honorary Advisory Council for Scientific and Industrial Research. The demand for greater food production directed attention toward the problems connected with the handling and curing of fish for food, which were being studied by the biochemists and bacteriologists associated with the Board. The fish merchants and dealers, being principally concerned with such problems, developed interest in the work done by the Board and, in 1923, the latter was reorganized to include a representative of the fishing industry from each coast as well as two administrative officials from the Department of Fisheries. Fisheries Experimental Stations specifically designed to investigate the problems of fish handling were established at Halifax, N.S., in 1924, and at Prince Rupert, B.C., in 1925.

The stations gradually developed permanent scientific staffs in order to achieve greater continuity in their investigations. Doubts of the efficacy of fish culture led to the appointment in 1924 of an investigator for continuous work at a temporary station at Cultus Lake, B.C., to determine the effectiveness of fish cultural procedure for the sockeye salmon. When the Dominion was given full control of the oyster fisheries of Prince Edward Island in 1929, the Board appointed a permanent investigator and, in 1930, established a subsidiary station for the study of the problems of the oyster fishery at Ellerslie, P.E.I. A demand for work on the fish-handling problems of the French-speaking fishing population of Gaspesia and northern New Brunswick led to the establishment by the Board in 1936 of the Gaspé Fisheries Experimental Station at Grand River, Que. A reorganization of the Board in 1937 added to it two additional representatives from the industry, and at the same time the name was changed to the Fisheries Research Board of Canada.

In 1920 the Governments of the United States, Canada, and Newfoundland established an organization to co-ordinate their fishery investigations in international waters of the western North Atlantic; this ultimately took the name of the North American Council on Fishery Investigations. In 1922, France, with fisheries on the Grand Banks and owning the Islands of St. Pierre and Miquelon, joined the Council. In the Pacific, also, greater co-operation in connection with fisheries was achieved. A Convention signed in 1911 by the United Kingdom (for Canada), the United States, Japan, and Russia stopped pelagic sealing and substituted therefor a method of control of fur seal production by the United States and Russia, who own the breeding islands in the north, parts of the product going to the other countries. By a treaty made effective in 1924, Canada and the United States established the International Fisheries Commission for the investigation and regulation of the common halibut fishery of the Pacific Coast, and, in 1937, a similar body, the International Pacific Salmon Fisheries Commission, was established to deal with the sockeye salmon of the Fraser River, which are of great importance to the fishermen of both countries.

The interior provinces of the Dominion, beginning with Ontario, took over control of their fisheries, which tended to give them responsibility for fisheries research in their own waters. Some years after the Georgian Bay Biological Station ceased to operate, the University of Toronto undertook a biological investigation of the waters of Ontario with the establishment in 1921 of the Ontario Fisheries Research Laboratory, which began work on Lake Nipigon. Finally, in 1937, a permanent site for the Laboratory was selected on Lake Opeongo in Algonquin Park. More direct practical investigations have been conducted by the Game and Fisheries Department of the Province. Quebec has carried on fresh-water investigations

under a Fish Culture Branch of the Department of Mines and Fisheries, with headquarters at McGill University. In 1931, Laval University established "la Station Biologique du St-Laurent à Trois-Pistoles" for marine investigations. In 1937 the Quebec Government formed "la Commission de Québec pour l'Etude du Saumon", which is conducting an investigation of the salmon of the Gulf of St. Lawrence. The Biological Board carried on investigations of lakes in the Prairie Provinces from 1926 until 1930, when these provinces took over the administration of their natural resources. For several years afterwards Manitoba attempted to continue these investigations in its own waters.

**Research Conducted in Recent Years.**—The Fisheries Research Board of Canada investigates the fishery problems of the Maritime Provinces and British Columbia, the only provinces at present whose fisheries are administered by the Dominion. The work is done at and from four principal stations, located at St. Andrews, N.B., Nanaimo, B.C., Halifax, N.S., and Prince Rupert, B.C., with a subsidiary station for oyster research at Ellerslie, P.E.I. The Board also operates a station at Grand River, Que., for the fish-handling problems of the French-speaking population of Quebec and northern New Brunswick, and a sub-station at Cultus Lake, B.C., for salmon investigations.

In co-operation with the National Research Council, the Board sponsors a National Committee on Fish Culture, which arranges for grants to university investigators and co-ordinates fish cultural investigations throughout Canada. The two bodies also sponsor a Canadian Committee on Oceanography, to co-ordinate and develop oceanographic and related research.

Research on hydrography, the physical background for the production of fish, includes studies of: (1) The nature, seasonal character, and movements of the waters on the Scotian shelf (continental shelf outside Nova Scotia). (2) Changes in the northern edge of the Gulf Stream. (3) River influence in the Atlantic related to salmon return. (4) The characteristics and movements of the waters of the Strait of Georgia and the Strait of Juan de Fuca over which the Fraser River exerts a dominant influence.

In confined inland waters, susceptible to control, the investigations include: (1) The effects of fertilizing water by adding fertilizers or by flooding land covered with vegetation. (2) "Fallowing" the water, preparatory to planting with desirable fish, by destroying other fish with derris root powder. (3) Making artificial freshets to distribute salmon suitably. (4) Prevention of pollution inimical to fish.

**Ocean Fisheries.**—Those investigated have been: (1) The erratic pilchard fishery of British Columbia (this failed in 1939 and Canadian boats had to go south to the Washington coast). These fish, by means of metal tags placed inside them, have been shown to be part of a stock taken as young off the Californian coast for canning as sardines. (2) The expanding herring fishery of British Columbia, which on the outer coast of Vancouver Island, however, has been steadily declining (the local populations are fairly distinct, mingling but little). (3) The Pacific ling cod, smelt, oulachon, and anchovy fisheries, the last-named a new development in 1939. (4) The Atlantic cod, which has somewhat local populations, in part spawning at different seasons, and with some complicated migrations. (5) The Atlantic haddock, (also with local populations and complicated migrations) which is heavily fished and seems to be decreasing. (6) The Atlantic lobster, more heavily fished than ever in some places (perhaps 60 p.c. of those of catchable size being taken each year as shown by tagging). (7) The Pacific halibut fishery, with limits set to the amounts

to be taken from specific areas, and with the expected increase in the spawning stock being tested by sampling the numbers of the deeply floating eggs.

*Mollusk Fisheries.*—There have been investigated: (1) The oysters of the Prince Edward Island region, almost eliminated in Malpeque Bay by a disease that started in 1914, but now brought back by cultural methods, with rapidly mounting annual yields; disease recently wiped out the fishery in other localities, but it has been brought back by the introduction of immune stock. (2) The scallop fishery of the Digby, N.S., region, which seems easily over-fished. (3) The clams of the Bay of Fundy, which it is hoped may be profitably 'farmed' in the future. (4) The quahaugs of the Prince Edward Island region. (5) The butter and little neck clams of Vancouver Island. (6) The native and the very large introduced Japanese oyster of Vancouver Island; for spawning the latter requires higher water temperatures (applied artificially in experiments) than usually occur in those waters.

*Fisheries for Migratory River Fishes.*—These include salmon and trout investigated as follows: (1) The sockeye salmon of the Fraser River, characterized by one very good year's fishing out of every four. (Means have been sought to bring back the cycle, which was interrupted by a rock slide in 1914.) (2) The sockeye salmon of the Skeena River. (3) The pink salmon of the Queen Charlotte Islands, for which no means have yet been found to obtain a good yield each year; every alternate year is very poor, although the actual year depends on the locality. (4) The various kinds of salmon and trout in the Cowichan River system of Vancouver Island. (5) Atlantic salmon; these fail to enter rivers sufficiently early to give good angling, and the numbers have decreased in recent years. (6) Speckled trout of the Maritime Provinces, both sea-run and purely freshwater types; these are in increasingly greater demand for angling as improved roads make the waters more accessible.

*Biological Problems of Varied Nature.*—Investigations cover: (1) The ship worm (*Teredo*) that attacks the piles of wharves, lobster traps, etc., in the waters of northern New Brunswick and Prince Edward Island. (2) The death of Atlantic salmon from high temperature in the Moser River, N.S. (3) The death of spring salmon at Sooke and of sockeye salmon in English Bay, B.C., through excessive growth of algæ. (4) The difficulties in rearing Atlantic salmon and speckled trout. (5) The fish-disease furunculosis that occurs in trout in British Columbia.

*Problems in Handling Fish for Food and Commercial Uses.*—For fresh (untreated) fish, a thorough study is being made of the changes associated with spoilage, which are not the same in freshwater fish as in sea fish. The possible advantages of incorporating various bactericidal substances in the ice used to keep fish fresh are being tested. For salted fish the prevention of 'red' and 'dun' has been given attention as well as the difficulties associated with the drying of salted fish for which unfavourable climatic conditions make artificial drying desirable. The possibilities in canning oysters and boneless cod have been tested, and other canning problems have been studied. Various fish oils have been investigated as to their vitamin content (as in cod-liver oil) and in connection with their use in the leather and paint industries. Fish enzymes are tested for use as bates in tanning. A start has also been made in determining the amounts of iodine in marine material.

### Subsection 3.—Aspects of Industrial Research in Canada.\*

No single industry can undertake to make use of a country's natural resources to the full and without waste. Science has shown that the waste products of farms,

\* Prepared in the Research Plans and Publications Section of the National Research Council.

mills, mines, and factories can be transformed into useful articles. Without scientific investigation Canada, instead of being one of the richest countries in the world as a result of the development of its natural resources, would be one of the poorest.

Research in industry in Canada is affected very largely by the parentage of many of our industries. Canadian industries draw on the results obtained by their respective American and British parent bodies. An American industry that employs hundreds of professional men to do research in its central organization is likely to have only a handful of people to do routine checking and perhaps an occasional piece of research in its Canadian subsidiary plant. Further, the companies that spend money on original research usually do not publish their findings and are reluctant to give information concerning this research work. It would be of tremendous value to Canada as a growing nation if the Canadian industries not only undertook original research but made the results known to all concerned.

Even to-day expenditures on industrial research in Canada are relatively small. This fact is illustrated by data showing the status of laboratories and laboratory equipment in Canadian industry in 1938. In that year there were in Canada approximately 1,000 industrial laboratories, employing 2,500 professional and 2,700 non-professional workers. The total investment in laboratory buildings and equipment was about \$10,500,000 and the total annual expenditure, including salaries and other expenses, was approximately \$9,000,000. While these figures may appear large, it must be noted that most of the laboratories are small, and that by far the greater proportion of them are engaged almost entirely in plant control and testing work, as opposed to research. Many of the staff members may and do conduct some research but this is incidental, their fundamental task being control of the uniformity and quality of the materials used or produced by the industry.

In Canada, one transportation system has established a laboratory as an adjunct to its medical department. This laboratory now handles not only medical and biochemical work but also general industrial and sanitary control and research, such as the sanitary analyses of water, ice, and milk products, purification of air, and the development of chemical methods for the examination and control of railway supplies, with the view not only of speeding up analysis, but also for the examination of compounds for which no established procedure exists. Methods of analysis for phosphates in soaps, for synthetic insecticides, volatile oils and perfumes, and phenols, and many other organic and inorganic tests have been developed. The method developed for phosphates in soap is an example of increased speed in determination. The railway laboratory has also succeeded very largely in overcoming the insect problems that were formerly incidental to transportation. In general, however, the value of the chemist has been overlooked by the railroads on this continent.

In England, France, and Germany large laboratories, employing research and analytical chemists in considerable numbers, have been maintained for years by the railway organizations. In other directions Canada has made progress in building up her chemical industries particularly those branches that have a solid foundation in the Dominion's natural resources of raw materials and energy.

**A Few Outstanding Examples of Industrial Research in Canada.**—One of the largest of the Canadian chemical process industries is the manufacture of pulp and paper. Radical changes in the methods of bleaching pulp that have been developed largely in Canada have greatly increased the efficiency of operation and

have reduced the amount of waste. One of the new products of the pulp and paper industry is 'vanillin' made from waste sulphite liquor.

The manufacture of phosphoric acid by oxidation was started in Canada in 1924. Phosphorus had been produced by the electrothermic smelting of phosphate rock since 1897. A plant was built in 1932 to use this pure phosphoric acid for making phosphate of lime which is used as one of the primary ingredients in many baking powders. The production of trisodium and disodium phosphate followed in 1934.

In recent years a number of additional products derived from acetylene have been prepared in Canada. Among these are acetylene black used in dry batteries and for thermal insulation, a variety of synthetic resins produced by polymerization of vinyl acetate alone and in conjunction with acetaldehyde and formaldehyde, ethyl acetate produced by the catalytic condensation of acetaldehyde, and vinyl acetate from acetylene and acetic acid.

A sulphuric acid plant erected in 1925 near Sudbury is believed to be the first contact plant to employ smelter gases. Much preliminary investigation was necessary, since these gases have characteristics different from those of ordinary burner gases.

The mining industry in Canada has been helped in many ways by the application of science. New mines have been discovered by the application of geology and geophysics. The determination of mineral deposits has been effected by these sciences. The limits of the Precambrian area, which is known to contain great mineral wealth, have been outlined by geological methods. The calibre of the Canadian work in geology is indicated by the fact that in a recently prepared list of Canadians who have distinguished themselves in the field of science about half the names are those of geologists.

Prior to 1920, nickel was used chiefly in armament manufacture. With the policy of reduction in armaments that followed, the nickel industry faced serious conditions. However, the research staffs in the United States and Great Britain developed new alloys and uses for nickel. Nickel has made possible the production of alloys having a wide variety of properties, sometimes opposite in character, such as low magnetic permeability (no-mag), extremely high magnetic permeability (permalloy), zero coefficient of thermal expansion (invar), the same coefficient of thermal expansion as glass (platinite) zero coefficient of electrical conductivity (constantan), resistance to tarnish (monel), resistance to tarnish at high temperatures (nichrome), resistance to alkalis, resistance to all common acids, hot or cold, dilute or concentrated.

In the metallurgical field Canada has contributed her share to progress. The late D. H. Browne conceived the idea of firing reverberatory furnaces with pulverized coal. This method made possible the burning of a greatly increased quantity of coal per unit of time. The higher temperature and higher rate of smelting resulted in a lower cost for fuel, refractories, and overhead, and reduced slag losses.

Selenium is being recovered as a by-product in refining the copper from certain mines. Recovery was started in 1931, and the output has grown so rapidly that Canada is now an important producer of the element.

An electrolytic process using as anodes the lead concentrate to be refined and as a bath a solution of lead fluosilicate containing an excess of fluosilicic acid was developed at Trail, B.C. The production of zinc at lowered cost was made possible

by the ingenuity of a group of men who saw the advantages of making use of the abundant source of hydro-electric power in Canada. The process developed has as its main features roasting, leaching, and electrolysis. A modified method of selective flotation was developed to cope with the problem of the complex lead-zinc ore from the Sullivan mine. This method has since become universal in the concentration of lead-zinc ores.

Since the remarkable development in recent years in the construction of the internal combustion engine, the refiner has been pressed to improve the quality of lubricating oil. Until comparatively recent years, the chemicals used in refinery practice were sulphuric acid, caustic soda, and litharge. Research has brought about an enormous decrease in the use of these chemicals and eliminated them altogether in some operations. This has been done by the development of more efficient processes, such as solvent extraction of lubricating oils and solvent de-waxing of lubricating oil distillate. Both of these methods result in lessened manufacturing costs and produce a product far superior in quality to that obtained by the old methods. An important Canadian contribution to petroleum refining is the use of a tower in which the ascending vapours of cracked gasoline meet a descending slurry of finely ground clay. It has been found that the gasoline from these towers will retain its colour and resist oxidation for an extended period.

#### Subsection 4.—Research in the Universities.\*

In general, research in Canadian universities covers the same broad fields as are covered by research in those organizations to which reference has already been made. The utilization, development, and conservation of the large and varied natural resources of Canada provide problems that engage the attention of all research organizations and several of them may carry on similar investigations at the same time. Thus, research in agriculture is carried on by government research workers and also by university scientists while research may be applied to mining problems by scientists in the Department of Mines and Resources, in laboratories of interested industrial firms, and in universities. This does not necessarily mean duplication of effort as investigations of Dominion-wide application are quite frequently carried on co-operatively, with different phases of the work being assigned to the various organizations. Again, the research efforts of universities often supplement those of the other organizations. Besides the study of problems of applied science, an important phase of university research is the investigations in 'pure science' which, although not initiated with a view to immediate application to specific problems, have added greatly to the store of scientific knowledge that may be drawn on to help solve problems as they arise.

#### University Research in the Field of Natural Resources Development.—

Since agriculture plays a large role in the Canadian economy, research in agricultural problems is actively pursued at many universities. This industry commands the services of specialists in a wide variety of scientific endeavour. The production of forage crops and of grain for the live-stock industry and of grain and other plant products for human food as well as for certain secondary purposes has been aided

\* Prepared in the Research Plans and Publications Section of the National Research Council, Ottawa.

by the work of university investigators. Considerable effort is expended on studies of the chemical, physical, and microbiological features of the soil in order to devise means of cultivation and discover suitable fertilizers to improve the yield and quality of crops of all kinds. An interesting phase of soil study has been the zonation of large areas for crop production on the basis of the suitability of the soil for specific crops and varieties. In this work the universities have taken a leading part.

The utilization of the products of the farm presents further problems for research. Cereal chemists in the universities are engaged in devising improved means of testing and controlling the quality of wheat, barley, flax, and other grains, and the products made from them. Bacteriologists, plant pathologists, engineers, chemists, and physicists are studying the conditions that provide safe storage for perishable foodstuffs such as meats, dairy products, and fruits. Others are engaged in devising means of producing new products for the purpose of widening the market for farm produce.

Among the many factors that limit the quantity of animal and plant production are diseases and parasites of animals and plants. University laboratories, dealing with such subjects as bacteriology, parasitology, plant pathology, and entomology, carry on investigations toward the control of such pests.

The application of the results of many of these researches is not limited to plant and animal production. Many investigations in parasitology, for instance, are of direct importance to human health. Some parasites that have injurious effects on human beings may be ingested with improperly prepared meat or fish. Such parasites would cause widespread misery but for the fact that public health authorities and others have used the information gained by research workers in the formulation of regulations governing the preparation of foodstuffs. By this means both the quality of the food supply and the health of the individual are protected.

In agriculture, weather is as important as soil and, consequently, the science of meteorology can offer the farmer aid by the development of weather forecasting and by providing information on the agricultural possibilities of local areas as these are affected by climate. In Canadian universities, meteorological studies are carried on for the purpose of extending knowledge of climatic conditions and their effects on crop yield and quality. The development of improved instruments for meteorological work also receives attention. The expansion of air transport has made necessary the rapid development of the branches of physical science that bear on meteorology, and valuable services to agriculture and forestry may arise as a by-product of this development.

The forest resources of Canada provide problems in the production of timber and the manufacture of such products as pulp, paper, and veneers, and studies of many of these problems are carried on either by scientists in university laboratories or in association with them. The production and conservation of forests is aided by research in entomology, botany, soils, meteorology, and aeronautics, in which researches the universities take part. The control of waste caused by forest fires has become a problem for the physicist and the engineer in developing equipment for detecting conditions predisposing to fire. Such problems as the difficulties that complicate the apparently simple procedure of floating logs to the mill have provided universities with opportunities for research and the results have proved useful to forest products industries.

In the utilization of forest resources, co-operative research in which university workers participate has been concerned with such subjects as the structure and properties of cellulose and lignin; bleaching, physical properties, and characteristics of cellulose-water systems; physical properties of wood; studies of the mechanism of sulphite and alkaline cooking; and purification of rayon.

The varied mineral wealth of Canada produces an equally varied set of problems, many of which are studied by university laboratories in the areas in which the mineral deposits occur. Among such problems are those dealing with the analysis, processing, and utilization of oil, natural gas, coal, tar sands, and various types of ores. The structure of metals and the development of improved alloys and metal products also receive attention. Studies on the petrographic and economic geology of mineral areas throughout the Dominion are also carried on.

Growing appreciation of the value of the animals, birds, and fish that form the wild-life population of Canada has resulted in increased attention to the factors influencing their abundance. In this work the universities have taken a very active part. The life histories of many of the creatures of the wild as well as those of their parasites and of the creatures and plants on which they feed are being investigated. Studies have been made of the migration of birds, the breeding habits of animals, and the factors affecting the value of feeding grounds. The knowledge accumulated from such work forms a sound basis for the work of wild-life conservation.

The inland fisheries of Canada also profit from the work of university investigators on the factors affecting the abundance of fish, the possibilities of stocking waters that are not now considered satisfactory for fish, and the releasing of varieties of fish in new localities which study has shown to be suitable habitats. University workers have also done work of value to the marine fisheries, although most of this type of investigation is conducted in co-operation with the Fisheries Research Board, whose program is described elsewhere in this article.

**Scientific and Other Phases of University Research.**—These examples of university research in agriculture, forestry, minerals, and fisheries, while obviously important, do not by any means complete the list, even in those fields. The results of many researches that fall in this class can be applied immediately upon completion of the investigation and have a direct and obvious connection with some phase of economic activity. Many engineering researches, for instance, have as their objective the solution of difficulties presented by the use of local materials for such purposes as the construction of roads and buildings, or the determination of remedial measures for certain local difficulties. An example of the latter is found in the study of deleterious effects of certain soils on concrete, now under way at a western university. The fundamental facts obtained in investigations of this nature are usually of wide general importance, even though the original problem is a local one.

The immediate practical application, and therefore the value, of the types of research described above are easily understood. There are, however, researches in many fields of science that are not at all well known, but that contribute to the general fund of knowledge and to the welfare of mankind. Many of these researches are of such a nature that their value can be understood only by those who can directly utilize their results, or who appreciate the gaps in technical knowledge that such

investigations attempt to bridge. Thus, for example, the professional man in medicine may be supplied with new drugs, improved methods, and more effective instruments for the control of disease as a result of researches in such subjects as physics and chemistry, which to the layman would appear to have little or no connection with the practice of medicine. In fundamental researches of this kind the universities are particularly active. Reference to this type of research is made below in connection with the discussion of medical research, some of which is carried on in universities and some in institutions such as hospitals and sanatoria, and some co-operatively in all these types of institutions.

Researches in all the fundamental sciences carried on in Canadian universities cover such a wide field that only a few examples can be quoted here. In the biological sciences, studies in classification of types of animal and plant life are carried on. These are of interest not only to the taxonomist but also to many scientific workers in other fields of endeavour. Thus workers in cytology, who deal with the structure and functions of the cells that make up the living organism, and those in genetics, who deal with the laws of inheritance, are continually building on the work of those who have made classifications of various kinds of living things. Therefore, in the practical application of genetics, plant and animal breeders who develop new types of plants or new breeds of live stock are indirectly indebted to the taxonomist. A university researcher dealing with the classification or habits of growth of fungi may appear to be working on a subject of no practical importance. But it must be remembered that many of the most important plant diseases, including rust and smut, are caused by fungi. The knowledge gained by the mycologist, or student of the fungi, is used by the plant pathologist, who is interested in controlling plant disease, and also by the plant breeder, who wishes to develop varieties of crops whose yield and quality will not be affected by disease. It is clear, therefore, that many obscure studies may have the greatest practical importance. In the production of plants and animals for all sorts of purposes the facts obtained in such fundamental researches are in constant use. In making such information available, not only with regard to living things but in the field of the inanimate as well, scientists in university laboratories continue to serve the country effectively, if unobtrusively.

The above examples of fundamental research as applied to biological problems have been mentioned in order to indicate the connection between the laboratory and the problems of practical everyday life. Many similar examples could be quoted in the fields of physics and chemistry. Within a short space of time remarkable technical advances have been made and automobiles, aeroplanes, and radios are the concrete evidence of progress. But there is a tendency to take these things for granted and little attempt to understand why they are available now, when they were not available forty years ago. The material from which they were constructed and the sources of the power for the factories were available, but their possibilities were not understood until research workers in their laboratories elicited fact after fact, and added these to the knowledge gained by their predecessors to build up a unified body of knowledge in one field after another. This knowledge was taken in hand by engineers, chemists, and others who were often more closely in contact with industry than the research worker himself, and applied to problems of production. The ordinary citizen reaps the benefit in the form of modern improvements. But

he rarely realizes that, in such laboratories as exist in Canadian universities from coast to coast, investigators in all phases of science are building on the work of their predecessors to make possible the physical, chemical, and biological wonders of the future.

*Medical Research in Canada.*—Almost all branches of medical science are included in the problems now being investigated in Canada. Medical research in hospitals or other centres of medical activity and in universities is too intimately related to allow of separate consideration and must be taken as a whole. The fundamental laboratory investigations often have as their aim the clinical application of results so that the university scientist and the clinician must work in the closest association.

Many of the investigations now being conducted relate to cancer, heart disease, tuberculosis, and rheumatism, four of the major causes of death and disability among Canadians. For example, the investigations on tuberculosis include such problems as a search for a specific compound that will act as a curative agent; studies on immunity and detection of the disease; the value of B.C.G. vaccine as a means of prevention among infants in tuberculous families and among nurses exposed to the disease in hospitals and sanatoria; the effect of diet on resistance; and surgical methods of treatment. Cancer researches include a study of the relation of certain food factors to the development of the disease; a test designed to aid in its early diagnosis; researches on standardization of X-ray equipment and radium to improve their efficiency as therapeutic agents; and the effects of cancer-producing substances. Further knowledge is being sought on the causes and treatment of coronary artery disease, high blood pressure, and associated pathological conditions in the thyroid gland and the cerebral vascular system.

Fundamental researches on medical subjects are being conducted in the science departments of many universities. In biochemistry and physiology, for example, the roles of vitamins and hormones, normal and abnormal requirements and functions of the body, nutritional deficiencies, and related topics are being examined. In pharmacology and chemistry, new chemical substances with therapeutic properties are being developed and tested. Immunological problems and methods of treatment of infectious diseases and the organisms causing them, improved techniques for detection and study of bacteria, and production of new or improved toxins and vaccines are all subjects of bacteriological investigations.

The field of university research is, therefore, as broad as science itself and is circumscribed only by the limited facilities at the disposal of the individual institutions. Indeed, most basic scientific research discoveries have been, and will probably continue to be, made in the universities; governmental research, on the other hand, is more properly concerned with the direct application of research knowledge to problems of national importance and the pursuit of individual problems which, because of their nature, scope, or the extensive facilities required, cannot well be followed to a conclusion by the universities.

**Subsection 5.—Other Research Organizations.\***

**The Research Council of Alberta.**—The Research Council of Alberta was organized in 1919 under the name of the Scientific and Industrial Research Council of Alberta and was attached to the Department of the Provincial Secretary. The Council was affiliated closely with the University of Alberta. Its laboratories were located in the University buildings and much of the research work of the Council was directed by members of the University staff. Two full-time, senior research workers were appointed and given university status. The Council received a direct government appropriation for its work. Investigational work included study of the coal resources of the Province, geological surveys, the bituminous sands of the Athabaska region, soil surveys, natural gas, and other problems. Annual Reports were published.

The Council was incorporated in 1930 by an Act of the Legislature under the name of the Research Council of Alberta and was attached to the Executive Council of Alberta.

Government appropriations for the Research Council were discontinued in 1933 because of the depression and have not been revived. However, the Council was not disbanded. The University took over the senior members of its research staff and provided funds for the continuance of part of its program of work. This arrangement still holds. Publication of annual reports was continued until 1935.

At present the Research Council is continuing, in a modest way, with the study of the coal resources of the Province. In addition, it is co-operating with the Provincial Government in the making of gasoline surveys and in the testing of petroleum products for specification purposes. The organization and laboratories of the Council are still intact and its work can be expanded whenever funds are made available.

**The Ontario Research Foundation.**—The Ontario Research Foundation was established by an Act of the Legislature in 1928. An endowment fund was created from subscriptions received, over a period of five years, from manufacturers, corporations, and private individuals, and from contributions by the Provincial Government on a dollar-for-dollar basis. Quarters in Queen's Park were set aside by the Government for offices and laboratories. At the beginning of 1940 there were 27 full-time research men on the staff as well as administrative officers and technical assistants.

Following the provisions laid down in the Act, researches have been carried out to assist agriculture and industry and to develop the natural resources of the Province. The following are examples of the types of investigations conducted by this institution.

Members of the staff in agriculture have studied the southeastern portion of the Province and have published three papers dealing with its physiography, climate, and soil. These papers give a comprehensive picture of the fundamental factors affecting crop yields, and their practical value can be readily appreciated. A similar study of the agricultural section of northern Ontario has been commenced. A survey is being made of the apple orchards in Ontario with a view to determining not only the most suitable varieties for different areas but also suitable areas for commercial production. An economic survey of dairy farms in the eastern part of the Province has been commenced as a preliminary step in a study of cheese production.

\* The material in this subsection has been prepared from information supplied by the various organizations covered.

In animal pathology, a study of bovine mastitis is in progress and microscopic and bacteriological examinations of samples of milk have been made. It is hoped that this work will assist the practising veterinarian in his efforts to diagnose the disease in its early stages and prevent its rapid spread through the herds. Work has been continued on parasitic infestation of domestic and game animals. Food stuffs infested with grubs have been sent in for examination and means of destroying the grubs have been worked out. Moth colonies have been maintained for the purpose of testing moth-resistant products.

The increased demand for vitamin assays has necessitated enlarged facilities in this field so that biological as well as chemical tests can be made. Many problems dealing with food spoilage and its prevention have been handled in the food laboratories. Several new processes have been developed that greatly benefited the manufacturers concerned, and, as a result, new industries have been started in the Province.

In the Leather Laboratory a process has been worked out for shortening the time required to tan sole leather and belting leather. Studies have been made on the wearing properties of leather and spew and on other problems of the leather industry.

New equipment for the heat treatment of steel has been added to the metallurgical department, thus attracting to Canadian firms industrial work that otherwise would have been sent to the United States. A fine-measurement department has also been added and is now in operation. Air-conditioning, and heating and ventilating equipment has been tested and numerous problems solved for metal-using firms in the Province. Fundamental researches on iron alloys have been continued.

In the Textile Division researches are in progress dealing with textile oil, scouring, wool shrinkage, and the structure and properties of silk fibre. These are fundamental in character and will benefit the industry as a whole. The Quality Control Plan which has been in operation for seven years has continued to expand both with regard to the number of firms participating in it and the range of materials covered. Day-to-day problems associated with the industry in general have been brought to this department for solution.

In the Chemical Division industrial fellowships have been maintained dealing with gas, the production of waxed paper, and the manufacture of coloured brick. An analytical laboratory has been established, not only for general analytical work but for referee work and studies of unknown compounds and products. Individual laboratories have been equipped to handle problems dealing with paint, paper, ink, ceramics, plastics, etc. There has been a marked increase in the number and diversity of problems submitted to this department.

Numerous papers have been published in scientific and trade journals and annual and monthly reports covering the work of the Foundation are issued.

**The Banting Research Foundation.**—The Banting Research Foundation, as a result of appeals made in 1925, raised the sum of some \$700,000, the income from which is devoted to two purposes. In the first instance, the Foundation makes grants to support the work of Sir Frederick Banting and his associates in the Department of Medical Research in the University of Toronto. Secondly, it makes grants to workers throughout Canada who present to the Trustees applications for aid in the solution of some problem of medical research. This aid may be given in the form of living expenses to the worker or for the purpose of buying apparatus or supplies, but it is usually the policy of the Foundation not to contribute

to the small items of supply that are supposed to be provided by the laboratory in which the worker is to be active. Each year there are some 20 to 25 workers scattered throughout Canada, usually in the Universities, who are receiving aid from the Foundation in this manner. It is the only Foundation of a private character in Canada that makes such grants and, consequently, the Foundation's grants are given only for work carried out in Canada.

Naturally, the problems taken up by the various workers vary greatly from year to year. However, it has been evident, particularly in recent years, that there is an increasing interest throughout Canada in the investigation of hormones and vitamins, which are so important physiologically. There is little doubt that the present tendency to investigate the action of these substances will do more to combat the ailments of old age than the study of the bacterial infections. The study of bacteria as infective agents, as is well known, has done a great deal to lower the incidence of disease, particularly among the youthful, and such scourges as typhoid fever, diphtheria, and scarlet fever have a much decreased incidence; of course it must not be forgotten that the progress made in the treatment of syphilis, gonorrhœa, pneumonia, and streptococcal infections by means of powerful internal antiseptics has done much to improve the mortality and morbidity statistics for the middle-age group and to a certain extent, the old-age group. A study of vitamins will doubtless contribute to the maintenance and development of health in the younger-age group, but there is increasing evidence that their study, and also that of the endocrines, should mitigate the ravages of disease in late middle and old age. The applications approved by the Banting Research Foundation in recent years clearly reflect this tendency, though it will be found that money has been granted for such purposes as research in the use of sulphanilamide and its cognate drugs.

**The Rockefeller Foundation.**—Assistance has been given by the Rockefeller Foundation to various agencies in Canada for the purpose of furthering scientific research in medical science, natural science, social science, and public health. A total amount of \$2,495,668 has been granted to universities, local health services, and other agencies up to the present time. Of this amount \$2,015,332 or almost 81.0 p.c. was allotted to research in medical science. McGill University received \$1,494,252, most of which was used in 1932 for the construction of a laboratory in the Royal Victoria Hospital and the establishment of an endowment fund for research in neurology, neurosurgery, and the physiology and pathology of the nervous system. The University of Montreal received \$375,000 for the development of medical laboratories over the period 1921-35. The University of Toronto received a total of \$146,080 to be used in research in pediatrics and psychiatry.

In the field of natural science, \$77,886 has been distributed, McGill University receiving \$72,386 and the University of Toronto \$5,500. A total of \$344,375 has been granted to organizations carrying on research in the social sciences. The Canadian National Committee for Mental Hygiene received \$75,000 between 1924 and 1929, for studies in mental hygiene as applied to school children. A further grant of \$60,000 was made towards a program of research in the social sciences and mental hygiene to be carried on in co-operation with seven Canadian universities. In the ten years 1930-40, the University of Toronto received \$175,000 for the development of child research and parent education. Smaller grants have been made to Dalhousie University and to the Ontario Medical Association.

The Health Departments of several provinces have received grants to carry on research in the field of public health. Alberta and British Columbia have received a joint grant of \$30,855 for research in disease peculiar to that area while Manitoba has received \$11,220 for special studies of morbidity and maternal mortality. The Bureau of Health in the Province of Quebec has received a total of \$16,000 towards the establishment of a Division of Industrial Hygiene and a Division of the Hygiene of Nutrition.

### Section 3.—Libraries.

The Dominion Bureau of Statistics publishes, biennially, a Survey of Libraries in Canada. It lists public, university, government, and other special libraries individually, showing the location, size, etc., of each. The latest edition, for 1936-38, includes information on school and hospital libraries. A summary of the data is included at pp. 1023-1025 of the 1939 Year Book; more recent information will not be available until 1941.

### Section 4.—Museums and Art.

At pp. 1025-1026 of the 1939 Year Book a list of the 37 museums (including art galleries) in Canada employing full-time staff was published, showing floor space and average daily attendance at each.

A complete directory of museums is available in a report, "Museums in Canada",\* published in 1938 by the Dominion Bureau of Statistics.

An article entitled "The Development of the Fine Arts in Canada", contributed by Newton MacTavish, M.A., D.Litt., appears at pp. 995-1009 of the 1931 Year Book and a shorter article, dealing more particularly with the National Art Gallery, at pp. 886-888 of the 1924 Year Book.

---

\* This publication may be obtained on application to the Dominion Statistician at the price of 25 cents per copy.

# CHAPTER XXVI.—PUBLIC HEALTH AND RELATED INSTITUTIONS.

## CONSPECTUS.

	PAGE.		PAGE.
SECTION 1. ADMINISTRATION.....	1013	Subsection 3. Charitable and Benevolent Institutions.....	1028
Subsection 1. Public Health Activities of the Dominion Government.....	1014	Subsection 4. Corrective and Reformative Institutions.....	1029
Subsection 2. Public Health Activities of the Provincial Governments.....	1017	SECTION 3. THE VICTORIAN ORDER OF NURSES.....	1029
SECTION 2. INSTITUTIONAL STATISTICS.....	1022	SECTION 4. THE CANADIAN RED CROSS SOCIETY.....	1029
Subsection 1. Statistics of Hospitals, Other Than Mental.....	1024		
Subsection 2. Statistics of Mental Hospitals.....	1027		

The rapid increase in the numbers committed to various institutions, such as hospitals for the insane, feeble-minded, and epileptic; the alleged increase in juvenile crime and the extension of social work in this field; the increasing number of institutions caring for the aged and incurable, as well as for dependent, neglected, and handicapped children, have been marked features of the first part of the twentieth century.

### Section 1.—Administration.

In Canada public health is administered by the Dominion and Provincial Governments through their respective health departments.

The Dominion Government deals only with such public health matters as are exclusively national, or such interprovincial public health matters as cannot be controlled effectively by the provinces. In addition, the Dominion Government makes grants to voluntary organizations that are engaged in public health work, notably: Canadian Welfare Council; Canadian National Institute for the Blind; Canadian Tuberculosis Association; Canadian National Committee for Mental Hygiene; Victorian Order of Nurses; Canadian Branch of the St. John Ambulance Association; Canadian Red Cross Society; Health League of Canada; Canadian Mental Hygiene Council.

The Dominion Council of Health was created in 1919 with the object of obtaining uniform legislation and procedure in the various provinces. This body consists of the Deputy Minister of the Dominion Department of Pensions and National Health as Chairman; the chief executive officer of the provincial department or board of health of each province; together with such other persons, not exceeding five, as may be appointed by the Governor in Council to hold office for three years. Of these appointed members, four represent agriculture, labour, and urban and rural women's work, respectively; the fifth member is a scientific adviser on public health matters. The Council meets twice a year at Ottawa, when public health problems are discussed and uniform standards and legislation adopted.

Speaking generally, the administration of local public health activities and the establishment and maintenance of institutions is in the hands of the Provincial Governments, under Sect. 92 of the British North America Act, 1867. Under their control, municipalities, societies, and individuals initiate charitable and humane efforts, depending on the Government to some extent for financial aid and for competent uniform inspection of methods and standards. Important, and reflecting most clearly the benefits accruing from such work, are the provisions for

medical inspection of school children. These are carried out in some cases by the district or sub-district medical health officers, and in others by public health nurses whose activities are confined to this work alone. In addition, expert advice and assistance are supplied free to children, teachers, and parents. In many cases dental inspection is provided for. This work is relatively new and has been carried on upon a considerable scale for only a short period, but great benefits have already resulted in the general improvement in health and sanitary conditions and in the control and prevention of epidemics.

Public hospitals are the most numerous among health institutions. They are usually erected and supported by the municipalities, their actual administration being in the hands of boards of trustees; their revenue, in addition to that provided by the municipalities, is derived from grants from the Provincial Governments, donations of individuals and societies, and fees paid by patients. Admission and treatment are free to all deserving persons who apply and whose resources are so limited as to prevent them from receiving proper medical attention otherwise, while it is generally expected of others that payments for services shall be made in proportion to costs and their ability to defray them. Such public hospitals include isolation and maternity hospitals, tuberculosis sanatoria, etc. The two lazarettos for lepers are under Dominion administration, as are also hospitals for veterans and certain marine and immigrant hospitals.

Private hospitals do not receive public grants. There are also hospitals that are conducted by various religious orders, most common in the Province of Quebec; Red Cross hospitals and outposts; and special hospitals that may be privately administered or maintained by the provinces.

Mental institutions (homes for the feeble-minded and the epileptic) are in most cases under provincial administration, although in Nova Scotia the insane are cared for in county institutions.

Among charitable and benevolent institutions, orphanages, refuges, and homes for the aged are usually supported by the larger centres and by county municipalities. Homes or schools for the deaf and dumb, and the blind are generally under provincial administration.

In the case of penal and reformatory institutions, penitentiaries are administered by the Dominion Government, while reformatories, industrial schools, prison farms, and similar corrective institutions are administered by the Provincial Governments.

### **Subsection 1.—Public Health Activities of the Dominion Government.**

The Act of Parliament (18-19 Geo. V, c. 39, An Act respecting the Department of Pensions and National Health) creating the Dominion Department of Pensions and National Health, clearly defined its functions. The Department is divided into two sections as indicated by the title. The chief functions of the National Health Section (which from 1919 to 1929 was the Department of Health) are: to protect the country against the entrance of infectious disease; to exclude immigrants who might become charges upon the country; to treat sick and injured mariners; to see that men employed on public construction work are provided with proper medical care; to set the standards and control the quality of food and drugs, except export meat and canned goods, which are under the Department of Agriculture; to control proprietary medicines and the importation and exportation of habit-forming drugs such as morphine, cocaine, etc.; to care for lepers; to carry out special studies in co-operation with Provincial Departments or Boards of Health;

and to co-operate with the provinces with a view to preserving and improving the public health. Following are the various Divisions of the National Health Sections with outlines of their function.

**Division of Quarantine, Leprosy, Immigration Medical, Sick Mariners and Marine Hospitals.**—*Quarantine*—Quarantine has for its object the prevention of the entry into the country by water, land, or air traffic of quarantinable diseases, especially plague, cholera, yellow fever, smallpox, and typhus. Quarantine stations are maintained at Halifax, N.S., Saint John, N.B., Quebec, Que., and William Head, B.C. In accordance with the principles laid down in the Convention of Paris, 1926, supervision is exercised over all vessels, especially those coming from abroad, and any passengers or crews who are found to be suffering from quarantinable disease, together with contacts, are removed to the quarantine station. Necessary measures are also taken regarding vessels infested with rats or other vermin. *Leprosy*—The Leprosy Branch of this Division operates two hospitals for the treatment of all cases of leprosy found in Canada—one at Tracadie, N.B., and the other at Bentinck Island, B.C. *Immigration Medical*—Medical advice is given the Immigration Department with regard to the mental and physical suitability of prospective immigrants. With this end in view there has been placed in Great Britain, Ireland, and on the Continent of Europe, a staff of Canadian doctors, who carefully examine all intending emigrants to Canada prior to their embarkation. This arrangement obviates the expense, discomfort, disappointment, and hardship experienced hitherto when it was necessary to deport, on account of physical or mental disability, immigrants who had made the journey across the ocean to Canada. Medical officers, stationed at the principal ports of entry in Canada, make a final inspection of the prospective immigrants and supply medical care for those who are ill on arrival. *Sick Mariners and Marine Hospitals*—The sick mariners and marine hospitals provide medical and surgical attendance and such other treatment as may be required to all sick and injured mariners arriving at Canadian ports and belonging to vessels that pay sick mariners' dues, in conformity with Part V of the Canada Shipping Act (c. 44, 1934).

**Division of Sanitary Engineering.**—The activities normally carried on under Public Health Engineering include: the administration of the Public Works Health Act, which is concerned with the health of men on construction works, canals, railways, and other forms of public works; by agreement with the U.S. Public Health Service, investigations and reports on sources of water supplies for use aboard common carriers in interprovincial and international traffic; special investigations and reports regarding pollution of the International Boundary waters in conjunction with representatives of the U.S. Public Health Service; supervision of water supplies of common carriers on the inland waters of Canada; co-operation with the Dominion Department of Mines and Resources *re* sanitation in National Parks and summer camps on Dominion lands, and allied matters; co-operation with the American Railway Association regarding regulations on sanitation; co-operation with the Provincial Health Departments and the U.S. Public Health Service for the certification of water supplies of common carriers in interprovincial and international traffic.

**Proprietary or Patent Medicine Division.**—This Division is organized to give the public a reasonably safe and truthfully labelled proprietary medicine supply. Registration of all secret-formula non-pharmacopœial medicines for human

use is required, and control is exercised over the potent drugs used in the manufacture of such medicines and the representations made regarding their use.

**Laboratory of Hygiene.**—The Laboratory of Hygiene is concerned mainly with the control of biologic products used in treatment of human diseases, particularly with reference to the potency of certain toxins, antitoxins, and other serological preparations. Sera and vaccines are scrutinized for purity, sterility, and potency. Such drugs as digitalis, strophanthus, ergot, pituitrin, and the salvarsans are examined for potency, and standards for them, based upon those of the League of Nations' Health Committee, are prepared by the Laboratory and furnished to all manufacturers desiring to use them in making their products. The manufacture and sale of vitamins and hormones are controlled. Disinfectants are investigated as to manufacturers' claims for germicidal qualities. Special and general aid is rendered to other departments of government, and research problems are undertaken.

**Food and Drugs Division.**—In this Division, inspection and laboratory services are maintained primarily for the purposes of the Food and Drugs Act, which is regulatory in character, designed to prevent the importation and sale of adulterated or misbranded food and drugs. Samples taken from suspected stocks are examined in laboratories at Halifax, Montreal, Ottawa, Toronto, Winnipeg, and Vancouver. Corrective measures are applied whenever adulteration or misbranding is found. Standards of quality have been established for many products, and the supervision of informative, truthful label declarations is a special objective. Laboratory services are provided for other Divisions of the Department, and co-operation with other departments of government is carried on effectively.

**Narcotic Drug Division.**—Since the introduction of opium smoking into Canada forty or more years ago, the use of habit-forming drugs, such as morphine, heroin, and cocaine, has increased. One of the first steps taken by the Department of Health was the creation of a Narcotic Branch. Through this Branch, the importation and sale of such drugs are controlled in accordance with the principles laid down by international Conventions agreed to at The Hague and Geneva. Wholesale agents and druggists are obliged to keep records of importation or sale and to forward their records periodically to the Department. The legitimate use of these habit-forming drugs is thus controlled.

**Epidemiology.**—The Epidemiological Division co-operates with the provincial Departments of Health in the control of communicable diseases and carries out special studies in regard to morbidity and mortality of disease and public health problems that arise from time to time.

**Industrial Hygiene.**—The purpose of the Industrial Hygiene Division is to develop methods for the protection and improvement of the health of industrial workers. This Division conducts special studies regarding illness in industries in co-operation with the provincial Departments of Health.

**Child and Maternal Hygiene.**—The work of this Division consists of measures designed for the reduction of infantile and maternal mortality in Canada. This necessitates collection of information regarding causative factors and the dissemination of knowledge regarding the application of remedial measures.

**Medical Investigation Division.**—This Division is concerned with medical examination of civil servants, supervision of sick leave and superannuation of civil servants throughout Canada on behalf of the Civil Service Commission, and special medical studies.

**Publicity and Health Education.**—As the name indicates, the efforts of this Division are directed towards the dissemination of information on all phases of public health. The work consists of the compilation and distribution of public health literature, of exhibits, lectures, etc.

## Subsection 2.—Public Health Activities of the Provincial Governments.\*

**Prince Edward Island.**—The supervision of public health matters in Prince Edward Island was placed, on July 1, 1931, under a specially created Department of Public Health, headed by a Minister and a Deputy Minister. Two part-time physicians, five full-time public health nurses, and two food and sanitary inspectors are employed. Under the direction of the Deputy Minister, the Province is divided into five public health districts and each nurse is assigned a territory in which she is responsible for the inspection of school children, home visits, home-nursing classes, immunizing and vaccinating clinics, etc. The sanitary and food inspectors make regular surveys of the food-manufacturing plants, school premises, hotels, boarding houses, restaurants, etc., throughout the Province.

The Government operates the Falconwood Hospital for the Insane and the Provincial Infirmary; it also subsidizes the Provincial Sanatorium, which has a capacity of seventy beds and has functioned to capacity since July 1, 1931. In charge of the Provincial Sanatorium is a Medical Superintendent with an assistant and a staff of trained nurses. The Superintendent conducts chest clinics throughout the Province at regular intervals as well as a regular weekly clinic in the Sanatorium, where referred cases from physicians are examined.

The Department of Health operates the Provincial Laboratory and a qualified technician examines material forwarded by physicians throughout the Province.

Two venereal disease clinics are conducted by the Public Health Department, one in Charlottetown and the other in Summerside. All prisoners in the gaols of Queens and Prince Counties are examined and treatment given when required. Other patients unable to attend these clinics on account of distance are treated by their own local physicians who are supplied with the necessary medication.

**Nova Scotia.**—In Nova Scotia the Department of Public Health directs its energies to communicable disease control; pre-natal, post-natal, and school hygiene; sewage disposal; safety of milk and water supplies; collection of vital statistics; mental hygiene; and health education. All of this has brought into being a comprehensive organization, presided over by a Minister. The Department acts in an advisory capacity to local boards of health; makes regulations respecting any matter relevant to the public health; maintains a field force that provides a consulting service in tuberculosis and other health activities; supports a public health nursing service with specially trained nurses, who work both in the schools and in the homes; gives a free public health laboratory service that extends throughout the Province; supervises the provincial hospitals, both general and special; provides inspection of public general hospitals and humane institutions; stocks and dispenses sera and vaccines; and distributes literature on all phases of health.

As interest in public health increases, a corresponding increase in the number of necessary public health activities becomes noticeable. In recent years a marked demand has resulted for trained and experienced health workers. In 1939 the Department procured (through the courtesy of the International Health Division,

\* The material under this heading has been revised by the respective provincial authorities.

Rockefeller Foundation) three more fellowships for specialized training of staff medical men. Two are at present pursuing studies at Toronto University and the third at Johns Hopkins, Baltimore, U.S.A. When these men return in the spring of 1940, three more health divisions will be organized in the Province. During 1939, the public health nursing service was expanded, a sanitary inspector was attached to the Cape Breton Island Health Unit, and an equipped dental trailer-car was put in operation in those rural districts that are a considerable distance from resident dentists.

In addition to the foregoing, the functions of the Department have broadened out recently; certain phases of social welfare and dependency such as the administration of mothers' allowances, old age pensions, child welfare, and a training school for the mentally deficient, have been included.

**New Brunswick.**—The Department of Health, under the administration of a Minister of Health, was established in 1918. It provides the following services: general sanitation, including supervision of water supplies and sewage disposal; control of communicable diseases, including tuberculosis and venereal diseases; public health laboratory and the supply of biologicals; medical inspection of schools; collection of vital statistics; public health nursing and child welfare; health education; and general supervision and co-ordination of the work of the sub-district boards of health.

Under the Minister, the Department is directed by the Chief Medical Officer who is also Registrar General of Vital Statistics. The staff consists of a director of laboratories, eleven full-time medical health officers, a director of public health nursing service and, in addition, a part-time director of venereal disease clinics.

There are ten health districts, each in charge of a District Medical Health Officer who also provides the tuberculosis diagnostic and medical inspection of schools services.

Sixteen sub-health districts, each with its own board of health of which the District Medical Health Officer is the chairman, have been organized. The sub-district boards of health have their own individual staffs of sanitary, food, plumbing, and other inspectors, and registrars of vital statistics and public health nurses, all operating under the Provincial Health Act and Regulations.

The Department also maintains twenty-four depots for the distribution of biologicals and twelve venereal disease clinics.

The twenty-second annual report of the Chief Medical Officer contains a review of the various services, the vital statistics for the Province, and the reports of staff members and of the sub-district boards of health.

**Quebec.**—The Department of Health, under the control of the Minister of Health, replaced the former Provincial Bureau of Health at the end of 1936.

In 1926, the Province of Quebec inaugurated a new system known as the 'county health units', consisting of a full-time health service for each county, or group of two or three adjoining counties. At present 44 health units covering 54 counties have been organized, and new counties have asked for the same privilege. The former district health officers, reduced to 11, are in charge of all the counties not yet organized as county health units.

The services of all these officers and their staffs of nurses, sanitary inspectors, etc., are given in the form of consultations, public lectures, school medical inspections, baby clinics, travelling tuberculosis clinics, and investigations of all kinds on immunization, sanitation, etc.

In addition to an Administrative Division, the Ministry of Health maintains the following divisions: Laboratories, Sanitary Engineering, Demography, Mental Hygiene, Public Charities, Epidemiology, Health Units and Districts, Industrial Hygiene, Nutrition (includes maternal and child welfare), Venereal Diseases, and Tuberculosis.

The energies of the Ministry of Health are directed also toward the prevention of epidemics, more particularly tuberculosis and the more important causes of infant mortality. To this end, the Ministry has established 21 anti-tuberculosis dispensaries and 70 baby clinics, including those receiving government grants. During the year 1938-39, 35,544 people were examined in the anti-tuberculosis dispensaries and the travelling tuberculosis clinics. The various county health units have provided for the immunization of 50,385 children against diphtheria, which, with those previously immunized, make a total of 322,304.

**Ontario.**—The Department of Health of Ontario is under a Minister of the Government. In the direction of the departmental program, he is assisted by a Deputy Minister and a Chief Medical Officer of Health. The activities of the Department are divided into the following Divisions: Hospitals, Tuberculosis Prevention, Venereal Disease Prevention, Preventable Diseases, Laboratories, Maternal and Child Hygiene and Public Health Nursing, Oral Hygiene, Sanitary Engineering, Industrial Hygiene, and Nurse Registration including Inspection of Training Schools for Nurses.

The local health work is (1939-40) carried on by a Board of Health and a Medical Officer of Health in each of the 900 municipalities. Fourteen municipalities have full-time health officers.

Increased emphasis is being placed on the control of venereal disease. The governing legislation has been strengthened to ensure that all those affected shall secure the necessary treatment. More accurate reporting of cases, more effective enforcement of control measures, and an attempt to create an enlightened public opinion are old objectives that are receiving new emphasis. Newer methods of treatment are being studied carefully. In those centres in which government-sponsored clinics are not in operation, the Department assumes 75 p.c. of the cost of treatment of those suffering from either syphilis or gonorrhoea, when patients are not in a position to pay for such treatment.

The continued maintenance of public interest in the prevention of tuberculosis has justified the large measure of emphasis placed, during the past four years, on this phase of the program. The Administration pays the maintenance charges of all those suffering from tuberculosis who are unable to meet the cost and need sanatorium treatment. Diagnostic service in respect to tuberculosis, is made available to all physicians through travelling clinics working out from various centres throughout the Province.

The Department has continued its efforts to make both diagnosis and treatment of cancer possible for all. Seven cancer clinics are operating in well-chosen centres in the Province; each of these is substantially subsidized by the Department.

The Department assumes the responsibility for the free distribution of biological products used in the prevention and cure of preventable diseases. Insulin is distributed to those in need of such treatment on the recommendation of the local authorities; a percentage of the cost is contributed by the local municipalities.

An efficient bacteriological service, including the examination and classification of pathological tissue, is offered through the central laboratory and the seven branch laboratories, which are situated at appropriate centres throughout the Province.

Consultative service in the field of mental hygiene is made available through clinics that operate throughout the Province. A regular schedule is maintained by these clinics and the profession is urged to take advantage of the service offered.

**Manitoba.**—Manitoba has an organized Department of Health and Public Welfare. The Health and Public Welfare Act states that the Minister shall preside over and have the management and direction of the Department, and the Department shall have administrative jurisdiction over all matters in the Province that relate to health and public welfare. The various Divisions of the Department include those of: Disease Prevention (food and dairy inspection, public health nursing, sanitation, venereal disease prevention, communicable diseases, industrial hygiene, maternal and child hygiene, health education, and central tuberculosis registry); Provincial Laboratories; Vital Statistics; Hospitalization; Psychiatry (Selkirk and Brandon Hospitals for Mental Diseases, Manitoba School for Mentally Defective Persons at Portage la Prairie, Psychopathic Hospital at Winnipeg); Child Welfare; Administration of Estates of Mentally Incompetent Persons; Fiscal Supervision of Public Institutions; Social Assistance in Unorganized Territory; Supervision of Aged and Infirm Persons (being supported by public funds); and Supervision of Medical Service (supplied by the Province).

The previously established Board of Health and the Welfare Supervision Board have assumed an advisory capacity to the Minister of Health and Public Welfare; the Child Welfare Board is both advisory and administrative, being responsible for the administration of the Child Welfare Act as it pertains to mothers' allowances.

**Saskatchewan.**—The Department of Public Health has been organized since 1923 under a Minister and a Deputy Minister. The Public Health Act of Saskatchewan also provides for a Public Health Council, consisting of the Deputy Minister as Chairman, three medical practitioners, a veterinary surgeon, and a civil engineer. This Council acts in an advisory capacity to consider new health regulations and allied problems.

The Department is organized into seven Divisions. The Division of Administration, directly under the Deputy Minister who is also the Registrar General, co-ordinates the activities of the Department as a whole; directs the general policy in public health matters; supervises finances, legislation, hospital grants, municipal boards of health, and medical relief in certain unorganized territories. The Division of Public Health Nursing supervises maternity grants; organizes inspection of school children and home visits, and pre-school and preventive clinics in co-operation with local physicians; and conducts a public health nursing service throughout the Province. The Division of Communicable Disease deals with epidemiology in all its phases and administers the regulations governing cemeteries and care of the dead. Supervision of trachoma, venereal disease, and tuberculosis (other than the organization of the Anti-Tuberculosis League) also comes under this Division. The Division of Sanitation supervises food, water, milk, and ice supplies, sewerage systems, urban and rural sanitation, and the organization of union hospital districts. The Division of Laboratories includes in its organization bacteriology, serology, pathology, chemical analyses, and medico-legal work. The Office of the Registrar General (formerly the Division of Vital Statistics) administers the Vital Statistics Act and the Marriage Act. The system used in classifying vital statistics

has been decided upon in co-operation with other provinces and the Dominion Bureau of Statistics. The Mental Hygiene Act and the mental institutions established under its provisions in North Battleford, Weyburn, and Regina (psychopathic ward) are administered by the Department, and the internal operations of these institutions are supervised by the Commissioner of Mental Services.

*Union Hospitals.*—In Saskatchewan, in addition to the general hospitals, there exists a system known as the Union Hospital Organization, designed to furnish hospital accommodation in rural districts. Under the provisions of this plan, two or more municipalities may co-operate in building, equipping, and maintaining a hospital. Municipalities constituting a hospital district may enter into an agreement with the hospital board to provide free treatment for certain classes of patients, the cost being borne by the municipalities concerned.

*Cancer Commission.*—This Commission, created in 1930, consists of the Deputy Minister of Public Health as Chairman, together with two physicians as members, and a physician as secretary. Consultative diagnostic and treatment clinics have been established in Regina and Saskatoon, and 'radon' is manufactured at an emanation plant in Saskatoon. Close contact is maintained with current advances in the prevention, diagnosis, and treatment of cancer.

*Health Services Board.*—This Board consists of the Deputy Minister as Chairman, a representative of the Provincial College of Physicians and Surgeons, and a representative of the Association of Rural Municipalities. The Board is inquiring into the extent and administration of the various health services existing in the Province, collecting and studying data on the general situation regarding incidence of illness from all causes, considering methods for an equitable distribution of the costs of illness, and studying the needs of the people with respect to general health services and the necessity for co-ordination of those now existing. An advisory committee is associated with the Board, and consists of representatives of medical, hospital, and allied organizations.

*Relief Medical Services Branch.*—At the present time grants are paid to physicians, dentists, and approved hospitals, and arrangements have been made with the Red Cross Society and the Canadian National Institute for the Blind to provide, from government funds, drugs and optical supplies to residents of the drought area who are unable to pay for them. The medical officer in charge of the Relief Medical Services Branch, besides administering these grants, also supervises medical and allied services that come under the Bureau of Labour and Public Welfare and the Northern Settlers' Branch of the Department of Municipal Affairs.

*Alberta.*—The Department of Public Health, established by an Act of the Provincial Legislature in 1919, administers the following Acts: the Child Welfare Act, the Chiroprody Act, the Department of Public Health Act, the Hospitals Act, the Sexual Sterilization Act, the Solemnization of Marriage Act, the Mental Diseases Act, the Mental Defectives Act, the Registered Nurses Act, the Public Health Nurses Act, the Public Health Act and Regulations, the Tuberculosis Act, the Optometry Act, the Mothers' Allowances Act, the Neglected Childrens Act, the Legitimation Act, the Maternal Welfare Act, the Chiropractic Act, the Poliomyelitis Sufferers Act, the Dental Association Act, the Municipal Hospitals Act, the Private Hospitals Act, the Medical Profession Act, the Alberta Pharmaceutical Act, the Venereal Diseases Prevention Act, the Vital Statistics Act, the Cemeteries Act, the Juvenile Delinquents Act, the University of Alberta Hospital Act, the Cancer Remedy Act, and the Cancer Treatment and Prevention Act.

The Department includes the following Divisions: Communicable Diseases; Sanitary Engineering and Sanitation; Public Health Education; Laboratory; Public Health Nursing; Municipal Hospitals; Hospital Inspection; Social Hygiene; Vital Statistics; Mental Hygiene; Dental Hygiene; Child Welfare and Mothers' Allowances. The following institutions are administered by the Department: Central Alberta Sanatorium; the Provincial Mental Hospital, Ponoka; the Provincial Training School, Red Deer; the Provincial Auxiliary Hospital, Claresholm; the Provincial Auxiliary Hospital, Raymond; and the Provincial Mental Institute, Edmonton.

Free clinics for venereal diseases are maintained in the principal cities and in the two provincial gaols. Educational work on social hygiene is carried on by means of lectures, moving pictures, bulletins, and radio talks.

Free treatment for infectious types of tuberculosis is provided for any bona fide resident, i.e., for any person who has resided in the Province for at least one year immediately preceding application for treatment in the sanatorium.

Under the authority of the Poliomyelitis Sufferers Act, 1938, provision is made for the free treatment in special hospitals of patients suffering from this disease. Provision is also made for academic instruction, vocational training, and rehabilitation of those suffering from paralysis resulting from this disease.

**British Columbia.**—The Provincial Health Officer, responsible to the Lieutenant-Governor in Council sitting as the Provincial Board of Health, administers the laws relating to public health in British Columbia. Five Divisions supply specialized services, namely: Tuberculosis Control, Venereal Disease Control, Laboratories, Sanitation, and Vital Statistics. Reorganization of the Division of Venereal Disease Control was completed during 1938. Government clinics for diagnosis and treatment are operated at Vancouver, Victoria, New Westminster, and Trail, while consultative service and free drugs are supplied to the private practitioners throughout the Province. Reorganization of the Division of Vital Statistics took place on Apr. 1, 1939, under the supervision of a Director, bringing this phase of public health work into line with the other services. The Division of Laboratories has extended its activities so that it supervises all branch laboratories throughout the Province, in addition to the central one in Vancouver. The Division of Tuberculosis Control has made further advances, and diagnostic and treatment services are extended to all parts of the Province. The Public Health Nursing Service is being constantly extended to include more rural areas of the Province, and particular attention is being given to public health education.

## Section 2.—Institutional Statistics.\*

Under authority granted by the Dominion Government in 1930, the Dominion Bureau of Statistics has, since that date, co-operated with the provincial authorities through the Census of Institutions, and now collects, on a Dominion-wide basis, statistics for the following types of institutions: (1) *Hospitals*—institutions primarily engaged in the prevention and cure of physical sickness and disease, such as hospitals for the sick, sanatoria, and institutions for incurables; (2) *Mental and neurological institutions*—such as asylums for the insane, institutions for the feeble-minded, epileptic, etc., devoted to the treatment and care of mental ailments; (3) *Charitable and benevolent institutions*—caring for the poor of both sexes and of all ages, such as

\* The statistics of this section have been revised by J. C. Brady, Officer in Charge of Census of Institutions, Dominion Bureau of Statistics.

homes for the aged, county refuges, orphanages, etc.; and (4) *Penal and corrective institutions*—having for their purpose the reclamation of criminals and the reformation and training of delinquent boys and girls. Institutional statistics, as summarized in Table 1, may, therefore, be regarded as dealing with the four main types of social pathology, viz., physical, mental, economic, and moral.

**Historical.**—A brief historical sketch of the origin and growth of the several classes of institutions in Canada is given at pp. 1006-1009 of the 1936 Year Book.

## Subsection 1.—Statistics of Hospitals, Other Than Mental.

From Table 1 it is seen that, in 1938, in addition to 610 public hospitals, there were 267 private hospitals, and 32 hospitals operated by the Dominion Government. The latter were made up of: 8 for war veterans, 4 quarantine and immigration, 1 marine, and 2 leper hospitals under the direction of the Department of Pensions and National Health; 9 military hospitals under the Department of National Defence; and 8 hospitals for Indians under the Department of Mines and Resources.\*

\* A complete list of all hospitals in Canada, giving name, location, type, and bed accommodation for 1938, is obtainable on application to the Dominion Bureau of Statistics.

## 2.—Summary of Reporting Public and Private Hospitals in Canada, 1934-38.

NOTE.—Figures include hospitals and homes for incurables, but do not include Dominion or mental hospitals. Tuberculosis hospitals are also excluded for 1938.

<sup>1</sup> These institutions are classified in detail in Table 1.

<sup>2</sup> Includes 9 general hospitals in Yukon and N.W.T. reporting 4 salaried doctors, 21 graduate nurses, 72 total personnel; 6 X-ray, 3 clinical laboratory, and 1 physiotherapy department; 1,130 admissions, 88 live births, a total of 1,340 under treatment, 1,159 discharges, 72 deaths, and 47,376 collective days' stay.

**Out-Patient Departments.**—Out-patient departments are operated in connection with hospitals or other institutions, and treat patients who do not occupy beds in the hospital. The extension of out-patient services to patients of modest means has far-reaching and beneficial effects. It may replace admission to a hospital, or may serve to secure necessary and beneficial hospitalization. As a general rule, out-patient departments are subsidized from the funds of the general hospital and separate records are not kept. Until a uniform system of accounting is adopted, it will not be possible to give the average cost per patient.

The statistics of Table 4 are rendered more complicated than is desirable because of lack of uniformity in the method of reporting patients and treatments. The majority of hospitals report both patients and treatments, but a considerable number report either patients or treatments, but not both.

#### 4.—Statistics of Out-Patient Departments of Public Hospitals, by Provinces, 1938.

#### Subsection 2.—Statistics of Mental Hospitals.

The Census of Mental Institutions of Canada for June 1, 1931, gave the number of patients in all mental institutions as 31,686, of whom 24,188 were insane, 7,006 mentally deficient, and 492 epileptic. The numbers of patients in mental institutions per 100,000 of the general population were: 305.4 on June 1, 1931; 316.5 on Dec. 31, 1932; 324.9 on Dec. 31, 1933; 335.6 on Dec. 31, 1934; 348.2 on Dec. 31, 1935; 359.5 on Dec. 31, 1936; and 373.5 on Dec. 31, 1937.

At Dec. 31, 1938, there were 42,687 patients in mental institutions in Canada, and 3,702 on parole, making a total of 46,389, whereas the normal bed capacity was only 38,671, showing a seriously overcrowded situation when the patient population on Jan. 1, 1938, and the admissions and separations during the year are considered. This overcrowded condition was specially marked in British Columbia, Manitoba, Saskatchewan, Ontario, and Quebec. Of the 42,687 resident patients in 1938, 33,290 were insane, 8,527 were mentally deficient, 672 were epileptic, and 198 mental cases were otherwise classified. The patients per 100,000 of population at the end of the year were 378.7.

### Subsection 3.—Charitable and Benevolent Institutions.

Statistics of institutions having the care of orphans, dependent or neglected children, and the aged and infirm are collected quinquennially, the latest figures available being those for June 1, 1936. The survey covered the following institutions and agencies: homes for adults only; homes for adults and children; orphanages;

provincial, county, and municipal houses of refuge; children's aid societies; juvenile immigration societies; and day nurseries. In recent years, there has been a decided trend from institutional to foster care for children, and, even where institutional care is given, the ultimate objective of observation and treatment is to train the children for life in the community.

Of the 459 institutions operating on June 1, 1936, 8.1 p.c. were under provincial control, 19.0 p.c. under county auspices, 5.0 p.c. under municipal or city control, 19.2 p.c. under lay corporations or private agencies, 2.6 p.c. under fraternal organizations, and 45.4 p.c. under religious organizations. On June 1, 1936, there were under care in all institutions 48,094 persons, of whom 14,681 were adults and 33,413 were children. Of the children under care, 17,058 or 51 p.c. were receiving care outside institutions under the control of public welfare organizations. The latest general summary of statistics for such institutions, by provinces, is for 1936 and appears at pp. 1045-1046 of the 1939 Year Book.

#### **Subsection 4.—Corrective and Reformatory Institutions.**

On June 1, 1936, there were 38 reformatory and corrective institutions in Canada with a total inmate population of 3,722, of which number 3,004 were males and 718 were females. Of the total number of institutions, 24 were for males and 14 for females. Detailed statistics of crime and delinquency (which are presented on an annual basis) as distinct from these institutional statistics are shown in Chapter XXVII.

### **Section 3.—The Victorian Order of Nurses.**

The Victorian Order of Nurses, established in 1897, is a national nursing organization having as its object the care of the sick in their own homes on a visit basis regardless of race, creed, or economic status.

The primary function of the Victorian Order is bedside nursing and teaching of health in the homes visited. Three types of care are given by the nurses, viz., maternal and infant welfare, general nursing, and health education. During 1939, the Order had 350 nurses in the field and 89 branches distributed as follows: Nova Scotia, 15; New Brunswick, 6; Quebec, 5; Ontario, 49; Manitoba, 1; Saskatchewan, 3; Alberta, 2; and British Columbia, 8. During 1939, 741,134 visits were made to 85,249 patients, which was an increase in the work as a whole. The average number of visits per case was 8.7. Of the total visits made, 59 p.c. were free, while fully paid visits constituted 25 p.c. (of which 16 p.c. were insurance) and partly paid visits 16 p.c. Maternal and infant welfare cases constituted 52.4 p.c. of the total visits made.

The maternal death rate per 1,000 living births attended by Victorian Order nurses for the years 1933-38 inclusive, was 2.1.

### **Section 4.—The Canadian Red Cross Society.\***

Closely allied with the Dominion and Provincial Governments, both in the prosecution of the War and in the promotion of the health of the people, is the Canadian Red Cross Society. Founded in 1896, its purposes are to furnish volunteer aid to the sick and wounded of armies in time of war, and, in time of peace, to carry on and assist in work for the improvement of health, the prevention of disease, and the mitigation of suffering.

\* Revised by W. S. Caldwell, M.D., Assistant Director of the Ontario Division, the Canadian Red Cross Society, Toronto.

Immediately upon the outbreak of war on Sept. 3, 1939, the Canadian Red Cross Society prepared energetically to undertake its traditional war-time services. The peace-time organization was expanded rapidly until at the close of the year over 2,000 branches in every part of Canada, from the smallest hamlets to the largest metropolitan centres, were feverishly engaged in Red Cross service. Particular mention should be made of the thousands of voluntary women workers who have applied themselves industriously to the making of supplies. Hospital articles, surgical dressings, refugee clothing, bedding, and field comforts in great variety have been made in hundreds of thousands. These have been sent overseas for distribution, placed in military hospitals on this side, or, in keeping with the policy of the International Committee and with the precedence of the United States and French Red Cross in the War of 1914-18, distributed to soldiers in training in Canada.

To finance the work, a nation-wide appeal for funds was made to the Canadian people. This resulted in the magnificent contribution of cash and pledges of \$5,118,086, a response that not only assured ample support for the work of the Red Cross, but one that was considered of great national significance throughout the Empire.

Before the close of the year 1939 much had been accomplished. By a grant of over \$100,000, hospital and recreational accommodation and scores of thousands of articles of clothing were provided in Halifax for British, Canadian, and Allied seamen and sailors entering that port. Similar services were rendered to the British Navy and Merchant Marine in Britain through a grant of \$100,000 to the British Navy League. An initial grant of an equivalent amount was made to the British Red Cross Society of which, at the outbreak of the War of 1914-18, the Canadian Red Cross had formed a part.

Through an excellent Overseas Advisory Committee headed by a former Prime Minister of Canada who has been active for years in Red Cross work, foundations were laid for many services to Canadian soldiers in England. Plans were completed and construction begun on a 600-bed Canadian Red Cross Base Hospital at Taplow. In London, the first Maple Leaf Club, a residential club for soldiers, was opened and is being operated by the Canadian Red Cross, which also initiated the establishment of the Beaver Club recreational centre. Committees were named to render personal services, to distribute field comforts, to visit patients in hospital, and to supervise the sending of parcels of food and clothing to prisoners of war.

Through close co-operation with the International Red Cross Committee and the League of Red Cross Societies at Geneva, assistance was sent to Red Cross Societies in Poland, Finland, Turkey, and France in the form of ambulances, hospital supplies, refugee clothing, bedding, and substantial cash contributions.

The prompt action of the Canadian Red Cross in initiating this war effort and the gratifying measure of work accomplished since the conflict began have been made possible by the organization that functioned during twenty years of peace. The more important phases of this peace-time work carried on by the Society are: the continuing care of sick and disabled ex-service men; the operation of Red Cross outpost hospitals; the promotion of Junior Red Cross and the treatment of crippled or otherwise disabled children; the maintenance of a disaster relief organization fully prepared for immediate action in any emergency; the organization of classes for the study of home nursing and nutrition; the care of immigrant women and children at the Port of Halifax; the training and supplying of visiting housekeepers for families when the homemaker is ill; co-operation with government departments

and voluntary organizations in the combating of disease, the promotion of child welfare, and the care of the physically defective—in general, provision for the needs of the distressed and destitute.

Since the inception of the peace-time program in 1920, the Red Cross Society has established outpost hospital service in 76 centres in Canada's northland. Twenty-four of these have been handed over to their communities, four have been found no longer necessary, and in 1939 there were 48 outposts operating under the emblem of Red Cross. In 1939, Red Cross outposts provided 99,608 days' care to patients in hospital. Without the aid of these outposts, thousands of our fellow-citizens who gain their livelihood on the fringes of the settled parts of Canada would lack any kind of skilled assistance in the event of sickness or injury.

Junior Red Cross, an organization for the pupils of elementary schools and the students of secondary schools, is devoted to the promotion of the principles of health, good citizenship, and international friendliness. Guided only by the teacher-director, the children work out their own program of personal and school hygiene, based on the twelve fundamental Junior Red Cross rules, community service, and interchange of portfolios with the Juniors of other lands. It is an educational movement, both in health and service. Since its inception, the Canadian Junior Red Cross has helped nearly 18,000 crippled or otherwise disabled children. Junior Red Cross now embraces a membership of over 19,000,000 children in 49 nations of the world. In the spring of 1940, there were over 17,000 Junior Red Cross branches in Canada, with a membership of over 500,000, and 1,010 Branches in Newfoundland with 33,014 members. Junior Red Cross in Newfoundland bears practically the same relation to the National Office as the nine provincial divisions in Canada.

Disaster relief services rendered, included rehabilitation of victims of the forest fire in northwestern Ontario, assistance to the families of a Nova Scotia fishing village that was badly damaged by a windstorm, and aid to the victims of an earthquake in Turkey.

The consolidated financial statement of the Society for 1939 showed total receipts of \$4,895,662, of which \$4,407,245 consisted of voluntary contributions, the greater part of which were collections from the National War Appeal made at the close of the year. Gross expenditures were \$1,816,126, of which the major items were \$613,950 on account of war services commitments, \$452,593 for outpost hospitals and nursing stations, \$134,592 for assistance to soldiers and their dependants, \$64,286 for the treatment of crippled children, \$76,894 for general and sickness relief, \$86,281 for disaster relief, \$57,403 for organization of Junior Red Cross.

Subsection 1. Convictions of Adults for Indictable Offences.....	1037	SECTION 4. MUNICIPAL POLICE STATISTICS	1051
		SECTION 5. PENITENTIARY STATISTICS....	1052

**Canadian Criminal Law and Procedure.**—An account of the development of the Criminal Code in Canada is given at pp. 1085-1087 of the 1934-35 edition of the Year Book. In that article a résumé of procedure and of the extent and jurisdiction of the various classes of judges and magistrates is given.

The statistics presented in the tables that follow, which are summarized from the "Annual Report of Statistics of Criminal and Other Offences", are collected directly from the criminal courts in the different judicial districts throughout the Dominion. There are 155 judicial districts, including 2 sub-districts, divided as to provinces as follows: Prince Edward Island 3, Nova Scotia 18, New Brunswick 15, Quebec 24, Ontario 47, Manitoba 6, Saskatchewan 21, Alberta 12, British Columbia 8, and Yukon 1. The figures for the Northwest Territories are obtained from the reports of the Royal Canadian Mounted Police.

### Section 1.—General Analyses.

The collection and publication of criminal statistics now made by the Dominion Bureau of Statistics was initiated in 1876 (39 Vict., c. 13). All records of crime since that time are now available in publications of the Judicial Statistics Branch of the Bureau. The statistics relate to years ended Sept. 30, the latest report being for 1938. Beginning with the report for 1922, an enlargement of the classification of offences has been adopted, by which offences of juvenile offenders are compiled separately from those of adults.

Crime is divided into two definite classes, 'criminal' or 'indictable' offences, which include all serious crime covered by the Criminal Code (see pp. 1039-1040), and 'summary' or 'non-indictable' offences, which comprise breaches of municipal by-laws, traffic laws, and other less serious crimes (see p. 1044). Broadly speaking, indictable offences are triable by jury, although in certain cases the accused is accorded the right of election as to whether he be tried by jury or before a judge without the intervention of a jury, and in other cases the jurisdiction of the magistrate as to trial is absolute and does not depend upon the consent of the accused. Non-indictable offences are usually dealt with summarily by police magistrates under the Summary Convictions Act. The term 'indictable' applies to offences of adults, similar offences committed by juveniles† being termed 'major' offences; non-indictable offences of adults are termed 'minor' offences when attributed to juveniles.

In 1938 there were 465,662 cases of adult offenders handled by the courts, as compared with 464,180 in 1937. Of this total, 50,998 cases were of an indictable

\* Revised by H. M. Boyd, Chief, Judicial Statistics Branch, Dominion Bureau of Statistics. The sixty-third "Annual Report of Statistics of Criminal and Other Offences", for the year ended Sept. 30, 1938, is obtainable from the Dominion Bureau of Statistics, Price 50 cents.

† The term 'juvenile' is restricted to persons under 16 years of age.

nature, while 414,664 were non-indictable. The corresponding figures for 1937 were 43,968 indictable and 420,212 non-indictable cases. In the case of juvenile offenders, 8,929 young persons were brought before the courts, of whom 1,894 were either dismissed or had their cases adjourned *sine die*.

**Convictions for All Offences.**—Total convictions in 1938 increased by 222, or 0·1 p.c. as compared with 1937. Of the total, 7,035 were cases in which juveniles were found guilty of major or minor delinquency, a decrease of 681 or 8·8 p.c. from 1937. The convictions of adults are treated in detail in Section 2 of this chapter and those of juveniles are shown in Section 3.

In using the statistics in Table 1, it should be remembered that, while the Criminal Code undergoes little change over periods of time, the figures of summary convictions are influenced very much by the changing customs of the people, and show a strong tendency to increase with the increasing urbanization of the population. Summary convictions, as a class, have generally increased in proportion to all offences, but the most significant figures in Table 1 are those of indictable offences per 100,000 population. Attention is drawn to the increase in the proportion of both indictable offences and summary offences to population in recent years.

The recent trend of total convictions, including those of juveniles, and of sentences imposed is shown by provinces for the years 1932 to 1938 in Table 2. Death sentences have shown a fairly steady decline over the period. In 1938 there were increases in the number of convictions in Prince Edward Island, Nova Scotia, Ontario, Manitoba, Alberta, and British Columbia.

**Pardons.**—The total number of cases in which the prerogative of mercy was exercised during 1938 was 1,555. Forty-eight of these were not imprisoned and received remission or reduction of fines, etc. The number released on ticket of leave was 644, with 888 released unconditionally; 14 previously on ticket of leave had their release made unconditional; 7 death sentences were commuted to life imprisonment; 21 were deported; and 49 fines were remitted or reduced.

## Section 2.—Offences of Adults.

The statistics in Table 4 are comparable with those shown for juvenile offenders in Table 18. The separation between adult and juvenile offenders is available only for the years beginning with 1922, but totals of adult offences for the years 1922-32 may be obtained by subtracting those of Table 18 from those of Table 1.

### 4.—Convictions of Adults for Indictable and Summary Offences, by Class of Offence, Years Ended Sept. 30, 1934-38.

**Subsection 1.—Convictions of Adults for Indictable Offences.**

The progress of a community, from a moral point of view, is often judged by the number of convictions for indictable offences, as these are less affected than non-indictable offences by extraneous circumstances and the varying methods of law enforcement in different areas and in different years. However, in the study of such statistics it is important to have comparable figures over a period of years, and these are set out by provinces for each year since 1911 in Table 5. Again, in Table 7 are shown the numbers of charges and convictions and the percentages of acquittals for the three years ended Sept. 30, 1936-38.

It may be stated that during the thirty-nine year period from 1900 to 1938 crimes increased from 5,768 to 43,599 or 655.9 p.c. The increase in the population during the same period was 111.5 p.c., revealing that the increase in the crime rate was nearly six times that of the population.

### 5.—Convictions of Adults for Indictable Offences, by Provinces, Years Ended Sept. 30, 1911-38.

NOTE.—For figures for 1900-10, see p. 1016 of the 1933 Year Book.

<sup>1</sup> Included with Manitoba, since that part of the N.W.T. from which earlier returns were received was included in Manitoba by the Extension of Boundaries Act, 1912. Later figures are for the present area of the N.W.T.

**Multiple Convictions.**—The total number of convictions must not be confused with the total number of persons convicted in any one year since an increasing number of persons tried for indictable offences have been convicted for more than one offence at the same trial. The trend of such multiple convictions is interesting to students of sociology.

### 6.—Numbers of Persons Convicted of More than One Crime at the Time of Trial Compared with the Numbers Convicted of One Crime, Years Ended Sept. 30, 1934-38.

Persons Convicted of—	1934.	1935.	1936.	1937.	1938.
	No.	No.	No.	No.	No.

Yukon and N.W.T.....	20	18	23	18	15	10	10.0	21.7	50.0
<b>Canada.....</b>	<b>42,541</b>	<b>36,059</b>	<b>43,968</b>	<b>37,148</b>	<b>50,998</b>	<b>43,599</b>	<b>15.2</b>	<b>15.5</b>	<b>17.0</b>

**Classes of Indictable Offences and Analyses of Convictions.**—Indictable offences are divided under the Canadian system into six main classes, as shown in Table 8. With the exception of Class IV, in which the decrease was slight, each of the classes showed an increase in 1938 over 1937. Convictions for indictable offences in 1938 numbered 43,599, being 17.4 p.c. higher than the 1937 figure of 37,148. Convictions for driving while drunk, which was formerly a non-indictable offence, accounted for 1,877 convictions of this increase; burglary, house-warehouse- and shop-breaking for 865; offences against gambling and lottery Acts 721; theft 707; and assault on and obstructing police 402.

**Convictions of Females.**—Over 9·6 p.c. of all convictions for indictable offences during 1938 were those of females. This is a slight decrease from the 10·2 percentage shown in 1937. Numerically, convictions of females increased from 3,783 in 1937 to 4,176 in 1938.

Convictions of women were a greater percentage of total convictions for 1938 than for 1937 in Prince Edward Island and in British Columbia. Figures for all other provinces showed declines, with the exception of those for Alberta which remained unchanged.

**Subsection 2.—Summary Convictions of Adults.**

The following statistics relate to non-indictable offences committed by adults (persons 16 years of age or over) and disposed of by police magistrates or other justices of the peace, under authority of the Summary Convictions Act. Such convictions numbered 414,664 during the year ended Sept. 30, 1938, a decrease of 5,548, or 1.3 p.c., as compared with 1937. Decreases were shown in New Brunswick, Quebec, Saskatchewan, British Columbia and Yukon; each of the other provinces showed an increase.

**13.—Summary Convictions of Adults, by Provinces, Years Ended Sept. 30, 1911-38.**

NOTE.—For figures for 1900-10, see p. 1020 of the 1933 Year Book.

<sup>1</sup> Included with Manitoba, since that part of the N.W.T. from which earlier returns were received was included in Manitoba by the Extension of Boundaries Act, 1912. Later figures are for the present area of the N.W.T.

The marked increase in the past nine or ten years has been due almost entirely to breaches of traffic regulations, which have risen from 96,340 in 1927 to 285,951\* in 1938, or from 50 p.c. to nearly 69 p.c. of the total summary convictions. Drunkenness; offences against fishery and game Acts, Inspection and Sales Act, masters and servants Acts, railway Acts, revenue laws and liquor Acts; non-payment of wages; contributing to delinquency of children; and vagrancy, all showed increases in convictions in 1938 over 1937. Offences against gambling Acts, breaches of traffic regulations, and breaches of by-laws showed substantial decreases.

\* Exclusive of 1,877 convictions for driving car while drunk. This offence, formerly included under breaches of traffic regulations, was, in 1938, classed as an indictable offence. (See Table 8.)

Book.

<sup>2</sup> Revised since the publication of the 1939 Year

**Convictions for Drunkenness.**—The number of summary convictions for drunkenness in Canada in 1938 was 36,894, an increase of 6.6 p.c. over 1937. This was the highest point reached since 1929, when 38,826 convictions were recorded. Maximum figures were attained in the years 1913 and 1914; during the War of 1914-18 there was an appreciable reduction and since then, while figures have fluctuated, they have not approximated the former high levels.

### 15.—Convictions for Drunkenness, by Provinces, Years Ended Sept. 30, 1911-38.

NOTE.—For figures for 1900-10, see p. 1021 of the 1933 Year Book.

<sup>1</sup> Included with Manitoba, since that part of the N.W.T. from which earlier returns were received was included in Manitoba by the Extension of Boundaries Act, 1912. Later figures are for the present area of the N.W.T.

**Offences Against the Liquor Acts.**—Until the War of 1914-18, alcoholic liquors were generally sold under specified conditions by licensed hotels or licensed shops. Offences against the liquor Acts usually represented a breach of the conditions of sale. During the War, prohibition was generally established but in more recent years the tendency has been for the Provincial Governments to take over the sale of liquor through commissions and derive revenue therefrom (see pp. 626-630). Eight of the nine provinces now have their liquor commissions, Prince Edward Island

being the only province in which prohibition prevails. In 1929, the number of convictions for offences against the liquor Acts reached the highest figure on record, viz., 19,327, but had decreased to 12,442 for 1938.

# **16.—Convictions for Offences Against the Liquor Acts, by Provinces, Years Ended Sept. 30, 1911-38.**

NOTE.—For figures for 1900-10, see p. 1022 of the 1933 Year Book.

<sup>1</sup> See footnote to Table 15, p. 1045.

**Breaches of Traffic Regulations.**—Convictions for breaches of traffic regulations (Table 17), which at the beginning of the century numbered only 185 in all Canada, have, as a result of the growing density and increasing use of motor vehicles, become the largest element in the non-indictable offences. Such convictions represented, in 1938, 69 p.c. of the total of 414,664 (see Table 14) summary convictions—a decrease of 2,737 as compared with 1937, largely accounted for by the fact that driving a car while drunk was, in 1938, classed as an indictable offence. Convictions for this offence, which in previous years were included under breaches of traffic regulations, numbered 1,877 in 1938.

# 17.—Convictions for Breaches of Traffic Regulations, by Provinces, Years Ended Sept. 30, 1911-38.

NOTE.—For figures for 1900-10, see p. 1023 of the 1933 Year Book.

<sup>1</sup> No convictions were reported for the Northwest Territories.

<sup>2</sup> Exclusive of 1,877 convictions for driving a car while drunk. This offence, formerly included under breaches of traffic regulations, was, in 1938, classed as an indictable offence. (See Table 8.)

For the year 1938, Ontario, which had 48 p.c. of the registrations of motor vehicles in Canada (see p. 665), had 65 p.c. of the total convictions; Quebec in the same year had 15 p.c. of the motor vehicles and 18 p.c. of the convictions; and Manitoba 6 p.c. of the motor vehicles and 9 p.c. of the convictions. In interpreting the figures in this way, however, it should be pointed out that traffic regulations are by no means uniform throughout Canada and no account is taken of the differences in the degrees of urbanization in the provinces. Thus, the above three provinces contain large centres of population, while in the Maritime Provinces, Saskatchewan, and Alberta, with lower degrees of urbanization, convictions were low in proportion to the number of motor vehicles registered.

**Sex of Offenders.**—Between 1926 and 1938 the numbers of females convicted of summary offences increased by 140·9 p.c. In proportion to the numbers of male offenders, however, they showed very small increase, only 6·4 p.c. of the offenders convicted summarily in 1938 being females, as against 6·1 p.c. in 1926. By sexes, the summary convictions appear as follows: 1926—males 159,528, females 10,385; 1927—males 182,392, females 10,848; 1928—males 232,554, females 13,209; 1929—males 274,977, females 15,066; 1930—males 292,557, females 16,202; 1931—males

312,111, females 15,667; 1932—males 281,318, females 16,591; 1933—males 275,229, females 17,444; 1934—males 311,542, females 17,202; 1935—males 339,494, females 23,148; 1936—males 355,772, females 21,934; 1937—males 395,699, females 24,513; 1938—males 389,648, females 25,016.

### Section 3.—Juvenile Delinquency.

The terms 'indictable' and 'non-indictable' are applied only to offences of adults, similar offences committed by juveniles (persons under 16 years of age) being termed 'major' offences and 'minor' offences, respectively.

Table 18 shows the numbers of convictions of juveniles for all offences, classified as major and minor offences, for the judicial years 1922-38. No separation by class of offence is available for earlier years. The rates per 100,000 population in this table apply to the total population, estimates of population by age not being generally available for intercensal years. Between 1930 and 1938, a definite upward trend is discernible in the column of percentage of major offences to all offences, but, when studied in relation to population growth, both major offences and minor offences have shown definite improvement since 1930.

#### 18.—Convictions of Juveniles for All Offences, Showing Major and Minor Offences, Years Ended Sept. 30, 1922-38.

NOTE.—In this table "Property Without Violence" includes Classes III and IV and "Other Major Offences" includes Classes V and VI of Table 8, p. 1040.

<sup>1</sup> No convictions were reported for the Territories.

While, officially, juveniles are persons under 16 years of age, public interest in the question of offences committed by 'young persons' has greatly increased in recent years, and, in response to this interest, the following table has been compiled, in which the convictions for indictable offences of persons aged 16 and under 21 have been added to the figures of juveniles found guilty of major offences. The rates per 100,000 population are the proportion of the offences committed by persons in any one age group, the figures of population being taken from the decennial censuses, except in the case of the two latest years, for which the population in each age group is the officially estimated population.

It will be observed that the age group 16 to under 21 years shows a much higher crime rate than the juvenile group (7 to under 16 years) or the total young persons group (7 to under 21 years). For 1911, the 16 to under 21 group shows a rate per 100,000 population of the same age which is 127 greater than that shown for juveniles and 83 greater than the general rate for young persons; for 1921, the proportion is 227 per 100,000 greater than the juvenile rate and 155 greater than the young persons rate; by 1931 the rate had increased to 359 greater than the juvenile rate and 236 greater than the young persons rate. In the three latest years the rate of this group continued to rise, reaching 523 convictions per 100,000 over the juvenile rate and 334 over the young persons rate in 1938.

**20.—Convictions of Juveniles for Major Offences and of Adults Aged 16-21 for Indictable Offences, by Age Groups and Rates per 100,000 Population of the Same Ages, Years Ended Sept. 30, 1911, 1921, 1931, and 1936-38.**

**Major Offences.**—In Table 21 are shown the various major offences for which juvenile delinquents were convicted from 1931 to 1938. It will be observed that theft and receiving stolen goods; breaking, entering, and theft; and other wilful damage to property account for the great bulk of the offences; in 1938, 94 p.c. of the major offences were of this character.

**Recidivism.**—The number of juvenile delinquents who have previously appeared before a court has generally increased although the fluctuations between individual years are rather wide over the period for which figures are available. As shown in Table 22, nearly a third of the juveniles convicted of major offences in 1938 had previously been found guilty, as compared with less than a fourth of those convicted of similar offences in 1929.

**22.—Juvenile Offenders Convicted of Major Offences, and Number of Times Convicted, Years Ended Sept. 30, 1929-38.**

### Section 4.—Municipal Police Statistics.

Police statistics were collected in 1938 from the 160 cities and towns that had 4,000 population or over in 1931 (1936 for the three Prairie Provinces), aggregating a total of 4,435,472 persons. The total number of police was 5,596, which is an average of one policeman to each 793 persons in the population of those cities and towns.

The returns showed a total of 461,024 crimes known to have been committed; 111,622 arrests were made and 252,471 summonses issued. The prosecutions numbered 358,903 with 308,611 convictions.

Automobiles reported stolen numbered 7,771 during 1938, while stolen automobiles reported recovered numbered 7,875 (cars stolen in rural areas are frequently recovered in cities and towns); 12,702 bicycles were stolen with 8,255 or 65.0 p.c. recovered. The value of other goods reported stolen was \$2,426,251 with \$1,119,618 or 46.1 p.c. recovered. There were 42,145 automobile accidents reported to the police; 428 deaths and 14,797 injuries resulted from such accidents. Other accidents reported resulted in the death of 523 persons and injuries to 6,516.

The Royal Canadian Mounted Police is dealt with in Chapter XXVIII—Miscellaneous Administration—at pp. 1071-1072.

## Section 5.—Penitentiary Statistics.

The Penitentiaries Branch of the Department of Justice is charged with the administration of the various penitentiaries of Canada. Seven institutions are included in the system, the two largest of which are at Portsmouth, Ont., and St. Vincent de Paul, Que., while the other five are at Dorchester, N.B.; Prince Albert, Sask.; Stony Mountain, Man.; New Westminster, B.C.; and Collins Bay, Ont. During the fiscal year ended Mar. 31, 1939, the average daily population of these institutions was 3,618 and the total net cash outlay for the year was \$2,593,764 or \$1.96 per convict per diem, compared with 3,371 average daily population and \$2,477,552 total net cash outlay or \$2.01 per convict per diem for the year 1938.

The special penitentiary for Doukhobors on Piers Island, which was administered under the warden of the penitentiary at New Westminster, was in operation from 1932 to Mar. 28, 1935, when the 39 remaining inmates were transferred to New Westminster. The statistics of this special penal colony are included with those of the regular penitentiaries in the following tables, and the reader is referred to p. 1035 of the 1936 Year Book for details of the Piers Island colony, given by sex, age, race, and conjugal condition.

Female convicts are kept in the penitentiary at Portsmouth, Ont., a suburb of Kingston, where special quarters and staff are maintained for their detention and supervision. Female convicts in custody there on Mar. 31, 1939, numbered 34 compared with 36 in 1938, and 30 in 1937.

**Movement of Population of Penal Institutions.**—Penal institutions may be classified under four heads: (1) penitentiaries, with slow turnover, since prisoners have long sentences; (2) reformatories for boys; (3) reformatories for girls, also with rather slow turnovers, but more rapid in the case of boys than in that of girls; and (4) common gaols, where the turnover is extremely rapid. If the average population for the year be taken as the average of the inmates at the beginning and at the end of the year, and the number discharged be the turnover, the turnover in 1938 was: in penitentiaries, 41 p.c.; in reformatories for boys, 244 p.c.; in reformatories for girls, 68 p.c.; in gaols, no less than 1,418 p.c. Thus, the average time spent in gaol was about 3·7 weeks. In dealing with these figures it must be borne in mind that the common gaol population changes from day to day, and is partly made up of accused persons awaiting trial who may be liberated to-day or sent to a penitentiary or reformatory to-morrow.

### 25.—Population of Penal Institutions, 1936-38.

NOTE.—Penitentiary statistics until 1919 were supplied directly by each penitentiary and were for the calendar year. For 1920 and subsequent years they have been supplied by the Superintendent of Penitentiaries and are for the fiscal years ended Mar. 31. Commencing with the fiscal year 1937 they have been compiled by the Dominion Bureau of Statistics. For other institutions, the figures are for the years ended Sept. 30.

<sup>1</sup> Revised since the publication of the 1939 Year Book.

Tables 26 to 28 give the more important penitentiary statistics as reported to the Bureau. The number of convicts in penitentiaries was 1,865 in 1910, rose to 2,118 in 1916 and declined to 1,468 in 1918. After demobilization and the depression of 1921, the number of convicts rose to 2,640 in 1922, declined to 2,225 in 1924, and then increased to 4,164 in 1932. The increase was particularly rapid after 1929, amounting to 1,395 or 44 p.c. in three years. The number of convicts in 1936, at 3,098, was lower than in any year since 1929, but in 1937 there was an increase of 5·4 p.c. with further increases of 9·7 p.c. in 1938 and 6·2 p.c. in 1939. The number of paroles, as shown in Table 26, was 280 in 1939.

## 26.—Movement of Convicts in Penitentiaries, Fiscal Years 1935-39.

NOTE.—The classifications in this table have been revised since the publication of the 1939 Year Book.

<b>In Custody, Ends of Years.....</b>	<b>3,552</b>	<b>3,098</b>	<b>3,264</b>	<b>3,580</b>	<b>3,803</b>

<sup>1</sup> This discrepancy between those in custody at the end of the fiscal year 1936 and the beginning of the fiscal year 1937 appears in the report of the Superintendent of Penitentiaries.

Table 27 shows the ages of convicts by groups. In 1939, of the total of 3,805, 11 p.c. were under 20 years of age; 45 p.c. between 20 and 30 years of age; thus 56 p.c. were under 30. In 1914, there were 2,003 convicts of whom 9.3 p.c. were under 20 and 44.4 p.c. between 20 and 30, a total of 53.7 p.c. under 30. In 1923, there were 2,486 convicts and 11.3 p.c. were under 20, 46.6 p.c. between 20 and 30, or 57.9 p.c. under 30 years of age. Detailed statistics of the race, nationality by place of birth, conjugal state, sex, social habits, and religion of convicts are presented in Table 28.

## 27.—Ages of Convicts in Penitentiaries, as at Mar. 31, 1932-39.

<sup>1</sup> The unusually high figures for many items and the totals in 1933 and 1934 are due to the confinement of Doukhobors in the special penitentiary on Piers Island, B.C. (see p. 1052).

<sup>2</sup> The classification of convicts by race and by place of birth was changed in 1939. For figures according to the previous classification for the years 1932-38, see p. 1073 of the 1939 Year Book.

<sup>3</sup> These persons returned themselves as Methodists in spite of the union with Presbyterians and Congregationalists to form the United Church of Canada in 1925.

## Section 1.—Public Lands.

In Table 1, summarizing the land area of Canada, Items 3, 4, and 5 are obtained from Dominion Government sources and Items 1, 2, and 7 from Provincial Government sources. In the majority of cases the area of provincial lands (Item 6), as calculated by balancing the figures, agrees with the area as estimated by the provincial Departments concerned. Thus, any differences reported from year to year in the area of lands alienated or in process of alienation are compensated for by the adjustment of lands still remaining under the Crown in the right of the provinces concerned.

### 1.—Classification of Lands in Canada, by Tenure (*circa* 1939).

NOTE.—The land area of Canada classified by surface resources is shown at p. 18.

Tenure.	P.E.I.	N.S.	N.B.	Que.	Ont.

Department of Mines and Resources.

<sup>2</sup> Estimated by the Hydrographic and Map Service,

<sup>3</sup> For the provinces indicated only.

N.W.T., areas aggregating 380,542,080 acres have been set apart by Order in Council as game preserves and sanctuaries in which only native Indians and Eskimos may hunt, but have not been permanently dedicated to this purpose by Parliament and are not, therefore, regarded as parks.

<sup>5</sup> Includes the Wood-Buffalo Park (which, though reserved by the Dominion, is not administered as a National Park) and the Tar Sands Reserve.

<sup>6</sup> That portion of the Wood-Buffalo Park in the Northwest Territories.

**Subsection 1.—Dominion Public Lands.\***

The public lands under the administration of the Dominion Government comprise: lands in the Northwest Territories, including the Arctic Archipelago and the islands in Hudson Strait and Bay; lands in Yukon Territory; National Parks (see pp. 19-22) and historic sites; Indian reserves (see p. 1061); Ordnance and Admiralty lands; and, in general, all lands held by the several departments of the Dominion Government for various purposes connected with Dominion administration. The lands and other natural resources lying within the boundaries of the Provinces of Manitoba, Saskatchewan, Alberta, and British Columbia, that had formerly been administered by the Dominion Government, were transferred in 1930 to the administration of the provinces concerned. (See p. 1019 of the 1931 Year Book.)

The great bulk of the land areas under Dominion administration are those of Yukon and the Northwest Territories, amounting to about 936,680,000 acres or 42 p.c. of the land surface of Canada. In general the southern border of both Yukon and the Northwest Territories is 60° N. latitude. In Europe, Oslo, Stockholm, and Leningrad are near this line, and about three-fourths of Norway, two-thirds of Sweden, all of Finland, and a large proportion of Russia are north of it. This northern part of the national domain is under the administration of the Lands, Parks, and Forests Branch of the Department of Mines and Resources. The Royal Canadian Mounted Police maintain law and order throughout Yukon and the Northwest Territories.

**The Northwest Territories.**—The government of the Northwest Territories is vested in a Commissioner, a Deputy Commissioner, and a Council of five members appointed by the Governor General in Council, with Ottawa as the seat of government. The Territories are subdivided for administrative purposes into the provisional Districts of Mackenzie, Keewatin, and Franklin. The District of Mackenzie is the most widely known and developed, trading posts and settlements being located all along the great stretch of inland waterways known as the Mackenzie System.

The administrative headquarters for the Mackenzie District is located at Fort Smith on the Slave River, immediately north of the Alberta-N.W.T. boundary. From this point there is uninterrupted navigation to the Arctic Ocean, a distance of 1,300 miles, and along the Arctic Coast as far east as King William Island. When navigation conditions are favourable, it is possible to effect inter-communication between the Western and Eastern Arctic through Bellot Strait which separates Boothia Peninsula, the most northerly tip of the mainland, from Somerset Island.

The Administration provides a medical and nursing service, assists the Anglican and Roman Catholic missions in providing educational and hospital facilities, and cares for the general welfare of the population of the Territories. The population of the Territories at the time of the 1931 Census was 9,723.

Areas totalling approximately 583,997 square miles, comprising many of the finest hunting grounds of the natives, have been set aside as preserves wherein only resident Indians, Eskimos, and half-breeds may hunt and trap game. Included in this area is the new Mackenzie Mountains Preserve, which takes in all the land between the Mackenzie River, the Yukon boundary, and the Peel River Preserve.

\* Prepared under the direction of R. A. Gibson, Director, Lands, Parks, and Forests Branch, Department of Mines and Resources, Ottawa.

With a view to conserving the game in the districts not included in the game preserves, licences to hunt and trap game may, under the regulations, be issued only to:—

1. Residents of the Northwest Territories as defined by these regulations who at the present time hold hunting and trapping licences and who continue to reside in the Northwest Territories.

2. The children of those who have had their domicile in the Northwest Territories for the past four years, provided such children continue to reside in the Northwest Territories.

The Wood-Buffalo Park in the vicinity of Fort Smith, which covers an area of 17,300 square miles (a portion of which is in Alberta), has been reserved specially for the protection of buffalo. The Thelon Game Sanctuary to the east of Great Slave Lake, which was set aside primarily to aid in the conservation of musk-oxen, provides sanctuary for all species of game. Under the Northwest Game Act, musk-oxen may not be killed anywhere in the Northwest Territories.

The Tar Sands Reservation comprises four areas amounting in all to 2,068 acres in the Fort McMurray District of Alberta. These areas were reserved in 1926 for the use of the National Parks Bureau, Department of Mines and Resources, to provide a supply of tar sands for road construction in the National Parks.

The reindeer industry, introduced into the Northwest Territories in 1935 by the importation of a herd of 2,370 animals from Alaska, is contributing to the welfare of the native population. The main herd of some 4,000 reindeer is maintained on the reserve of 6,600 square miles immediately east of the Mackenzie Delta, and a subsidiary herd of nearly 1,200 head has been established under native management near the Anderson River, about 150 miles east of the reserve.

In view of the great increase in the use of aircraft for mail and general transportation, the Administration is developing landing facilities at many points throughout the Mackenzie District. Winter landing fields have been provided at Fort Smith, Resolution, Providence, Wrigley, Simpson, and Norman. Floating docks, etc., have been constructed at several points for the use of seaplanes.

An excellent air-mail service is provided by the Post Office Department, while the Department of National Defence operates a system of radio stations linking up the chief settlements and mining centres of the Northwest Territories and the Yukon Territory with Edmonton, Alberta. Radio stations, exclusive of private commercial stations, are in operation at Fort Smith, Resolution, Simpson, Norman, Aklavik, Port Radium, Yellowknife, Dawson, Mayo, and Whitehorse. Direction-finding and meteorological stations are operated by the Department of Transport at Chesterfield, Nottingham Island, Resolution Island, and Coppermine.

Exploratory work has been carried on throughout the Territories and much aerial surveying has been done, particularly in the mineralized areas of Mackenzie District. Mineral prospectors are exploring new areas, the aeroplane being used as the chief means of transportation. The Precambrian Shield, which has proved so rich in valuable minerals in southern Canada, is continued into the Territories—that portion lying between Great Slave and Great Bear Lakes and Hudson Bay—and valuable discoveries have been made in this area. The rich native silver and high-grade pitchblende ores, discovered during the past few years near Great Bear Lake, are now under development. The oil wells near Norman on the Mackenzie River have been in active operation since 1932 and have been supplying the needs of the mines at Great Bear Lake. Shipments of oil to mining companies in the Yellowknife area commenced in 1938. In recent years much prospecting has

been carried on in the Great Slave Lake area where discoveries of gold have been made. Two mines are producing gold and others are expected to be in production shortly. The agricultural land of the Territories lies almost entirely in the extension of the central plain along the Mackenzie Valley.

It is known that there are many potential water-power sites throughout the Territories and one of them will probably be developed in the near future as a consequence of mining enterprises. Much of the Mackenzie Valley carries a forest cover that furnishes timber and fuel for local needs. Fishing, agriculture, and lumbering are engaged in to some extent, but the principal industry of the Territories is still the taking and exportation of furs, with mining rapidly increasing in importance. Many trading posts operate throughout the regions tributary to the Arctic Coast, Hudson Bay, and the great inland systems of waterways.

**Yukon.**—Yukon was created a separate Territory in June, 1898. Provision is made for a local Government composed of a chief executive classified as Controller, also an Elective Legislative Council with jurisdiction over local matters and composed of three members with a three-year tenure of office. The Controller administers the Government under instructions from the Governor General in Council or the Minister of Mines and Resources. The seat of government is at Dawson. The Territory has hospitals, schools, and other amenities of modern life, including wireless and telegraphic facilities. The population in 1931 was 4,230.

The usual route followed by travellers to the Yukon Territory is by steamer from ports on the Pacific Coast to Skagway, Alaska, from that point to Whitehorse by the White Pass and Yukon Railway, and thence by river boat to Dawson.

The use of aircraft for transportation purposes is increasing and landing fields have been conditioned at Dawson, Mayo, Whitehorse, and Carcross. A temporary licence has been issued for the field at Whitehorse which is becoming important because it is on the main route for international traffic. Some work has been done on emergency fields at Selkirk, Carmacks, McQuesten, and Minto.

Yukon has produced over \$200,000,000 worth of gold since the Klondike rush, but the old placer claims, operated with cradle, pick, and shovel, have given place to consolidated holdings worked with hydraulic dredges and other modern machinery. The development of the silver-lead ores of the Mayo district has been one of the major factors in the growth of lode-mining enterprises. Copper, tungsten, and coal are also found in the Yukon Territory. There is a hydro-electric installation of 18,199 h.p. in Yukon, which is used to supply electric energy for placer-mining operations and for the City of Dawson.

Although fishing, agriculture (including fur farming), and some lumbering are carried on as auxiliary industries, the future of Yukon is inevitably bound up with mining development and the fur trade.

### Subsection 2.—Provincial Public Lands.

In the Maritime Provinces and in Quebec, Ontario, and British Columbia (except the Railway Belt and the Peace River Block) the public lands have been administered by the Provincial Governments since Confederation. Since the transfer of the natural resources to the Prairie Provinces and British Columbia (see p. 1019 of the 1931 Year Book) public lands in all provinces have been under provincial administration. In Prince Edward Island, all the land is alienated and there are no provincial public lands.

Information regarding provincial public lands may be obtained from the following officials of the respective provinces: Minister of Lands and Forests, Halifax, N.S.; Deputy Minister of Lands and Mines, Fredericton, N.B.; Deputy Minister of Lands and Forests, Quebec, Que.; Deputy Minister of Lands and Forests, Toronto, Ont.; Director of Lands, Department of Mines and Natural Resources, Winnipeg, Man.; Director of Lands, Department of Natural Resources, Regina, Sask.; Director of Lands, Department of Lands and Mines, Edmonton, Alta.; Deputy Minister of Lands, Victoria, B.C.

## Section 2.—National Defence.

In view of the rapidly changing conditions in the defence services owing to the present state of war, the descriptive material concerning the Royal Canadian Navy, the Canadian Militia, and the Royal Canadian Air Force usually appearing in this Section (see pp. 1078-1083 of the 1939 edition of the Year Book) has been omitted. A description of Canada's war effort will be found in the Introduction to this volume.

## Section 3.—Department of Public Works.\*

The constructing department of the Dominion Government, since before Confederation, has been known as the Department of Public Works. The work of the Department is divided into three principal branches, viz., the Engineering Branch, the Architect's Branch, and the Telegraph Branch.

**Engineering.**—The Engineering Branch conducts the construction and repair of wharves, piers, breakwaters, dams, weirs, bank and beach protection works; the improvement of harbours and rivers by dredging; the construction, operation, and maintenance of dredging plant and the construction, operation, and maintenance of graving or dry docks; the construction and maintenance of interprovincial bridges and approaches thereto, also the construction, operation, and maintenance of bridges with movable spans on certain highways; hydrographical and topographical surveys that are required for the preparation of plans, reports, and estimates; test borings for the purpose of ascertaining the nature of foundations; the testing of cements and materials of construction; the licensing of international and interprovincial ferries; and the control of works constructed in or over navigable waters by authority of the Navigable Waters Protection Act (R.S.C., 1927, c. 140).

**Architecture.**—The Architect's Branch constructs and maintains Government buildings, post offices, customs houses, examining warehouses, quarantine stations, immigration and experimental farm buildings, military hospitals, and telegraph offices. It also constructs armouries and drill halls and leases office accommodation as required for the various Departments.

**Telegraphs.**—The Telegraph Branch has control of the construction, operation, and maintenance of all Government-owned telegraph lines and cables. These lines are located in the Provinces of Nova Scotia, New Brunswick, Quebec, Ontario, Saskatchewan, Alberta, British Columbia, and Yukon (see also p. 715).

**Graving Docks.**—The Department has constructed five dry docks and is responsible for subsidies under the Dry Dock Subsidies Act, 1910 (9-10 Edw. VII, c. 17). A description of these docks is given in the Transportation Chapter, p. 682.

\* Revised by J. M. Somerville, Secretary, Department of Public Works.

## Section 4.—The Indians and Eskimos of Canada.

### Subsection 1.—The Indians of Canada.\*

The Indians of Canada, whose affairs are administered by the Indian Affairs Branch, Department of Mines and Resources, number about 118,406 (according to a departmental census taken in 1939). The popular notion that the race is disappearing is not in accordance with facts. Before they were subjected to the degenerating effects of European civilization and the devastating results of the many colonial wars, the numbers of the Indians were undoubtedly larger, but any reliable information as to the aboriginal population, during either the French or the early British régimes, is non-existent, and there is no adequate basis for a comparison between the past and present aboriginal populations. An interesting sketch of the progress of the Indians of Canada since Confederation will be found in the Report of the Department of Indian Affairs, 1927.

**Administration.**†—Reserves have been set aside for the various bands of Indians throughout the Dominion and the Indians located thereon are under the supervision of the local agents of the Department. The activities of the Department, as guardian of the Indians, include the control of Indian education and health, the development of agriculture and other pursuits among them, the administration of their lands, community funds, estates, and the general supervision of their welfare.

The local administration of the Indian bands on the reserves scattered throughout the Dominion is conducted through the Department's agencies, of which there are in all 114. The number of bands supervised by an agency varies from one to more than 30. The staff of an agency usually includes, in addition to the agent, various officers such as medical officer, clerk, farm instructor, field matron, constable, stockman, etc., according to the special requirements of the agency in question. The work of the agencies is supervised by the Department's inspectors, each inspector having charge of a certain number of agencies. Expenditures upon destitute Indians are made by the Dominion Government, either from public funds or from tribal funds of the Indians themselves.

The Indian Act provides for the enfranchisement of Indians. When an Indian is enfranchised he ceases to be an Indian under the law and acquires the full status of citizenship. In the older provinces, where the Indians have been longer in contact with civilization, many are becoming enfranchised. Great discretion, however, is exercised by the Government in dealing with this problem, as Indians who become enfranchised lose the special protection attached to their wardship, so that it is necessary to guard against premature enfranchisement.

**Treaties.**—In the older eastern provinces, the history of the Indians has been one of slow development with that of the community. In western Ontario, the Prairie Provinces, and the Territories the situation has been different. There, the rapid spread of civilization made it necessary to take prompt and effective measures to protect the moral claims of the Indians, which are recognized by the Government. Accordingly, treaties were entered into with the Indians whereby the latter ceded to the Crown their aboriginal title and interest in the country. In consideration of such cession the Crown agreed to: set aside adequate reserves;

\* Revised by T. R. L. MacInnes, Secretary, Indian Affairs Branch, Department of Mines and Resources.

† For an outline of the early administration, see p. 937 of the 1932 Year Book.

make cash grants; provide per capita annuities; give assistance in agriculture, stock-raising, hunting, trapping, etc., as particular circumstances might require; provide education for the Indian children; and otherwise safeguard the Indians' interests. These treaties were made from time to time as occasion arose and as new territories were opened up. No treaty has been made with the Indians of British Columbia, except in the Peace River Block, but their welfare has received no less attention from the Government on that account.

**Government Expenditure.**—On Mar. 31, 1939, the capital of the Indian Trust Fund, which a year earlier had amounted to \$14,081,905, had increased to \$14,149,503. The amounts expended from the Consolidated Revenue Fund were as follows: voted by Parliament for the purposes of the Department, \$4,895,138; annuities by statute, \$253,189; and special supplementary, \$38,000.

**Population.**—The Indian Affairs Branch takes a quinquennial census of the Indians under its control. The results of the latest of these censuses, taken in 1939, show a total of 118,406 Indians as compared with 112,510 in 1934 and 108,012 in 1929, an increase of 9.9 p.c. in ten years. Details are given in the Annual Report of the Department of Mines and Resources for 1939. The figures given in Table 2 are those of the seven Dominion decennial censuses since Confederation, and include some thousands of persons of Indian racial origin who are not on the reserves but are living as ordinary citizens of Canada.

## 2.—Indian Population of Canada at the Decennial Censuses of 1871-1931.

Province or Territory.	1871. <sup>1</sup>	1881. <sup>1</sup>	1891. <sup>2</sup>	1901.	1911.	1921.	1931.

<b>Canada.....</b>	<b>102,358</b>	<b>108,547</b>	<b>120,638</b>	<b>127,944<sup>4</sup></b>	<b>105,492</b>	<b>110,596</b>	<b>122,920</b>

<sup>1</sup> Census figures in the organized provinces and estimates for the rest of Canada.

<sup>2</sup> Racial origin not taken in 1891; the figures have been taken from the report of the Department of Indian Affairs of that year.

<sup>3</sup> The decrease in the Indian population of the Northwest Territories is due to the extension of the boundaries of Quebec, Ontario, and Manitoba in 1912. This also accounts for the increase in the 1921 Indian population of these provinces.

<sup>4</sup> Includes 34,481 'half-breeds'.

**Indian Education.**—The educational work of the Department is now very extensive. In the fiscal year 1939, a total of 373 Indian schools were in operation, including 79 residential schools for Indians with an enrolment of 9,179, and 283 day schools for Indians with an enrolment of 9,329 Indian pupils, also 11 combined public and Indian schools, with 244 Indian pupils enrolled. The total enrolment of Indian pupils at school has increased from 12,799 in 1915-16 to 18,752 in 1938-39 and the average attendance from 8,080 to 14,508 (63.1 p.c. to 77.4 p.c. of the enrolment). Continuation and high school work is now being taught in several of the day and residential schools. The amount spent on Indian education in the fiscal year 1939, was \$1,846,205.

<sup>1</sup> Includes income received from timber and mining dues and from annuities earned as interest on Indian trust funds, but not money received from land rentals for which figures are not available by provinces.

## Subsection 2.—The Eskimos of Canada.\*

The Eskimos of Canada are found principally on the northern and Hudson Bay coasts of the mainland and on islands in the Arctic Archipelago and in Hudson Bay, although in the Baker Lake-Chesterfield Inlet area on the west side of Hudson Bay there are bands of Eskimos who are essentially an inland people, and who subsist chiefly on caribou. The diet of the coast Eskimos is largely marine mammals and fish, varied at times by caribou obtained from the interior during the seasonal migrations of these animals. The skins of the caribou are used for winter clothing.

The wandering life of the Eskimos and the vast area over which they are scattered present great difficulties in ascertaining their exact numbers. The total for the entire Dominion, according to the latest returns, is about 6,500, located mainly in the Northwest Territories, with approximately 1,590 in Quebec, 85 in Yukon Territory, 62 in Manitoba, and 3 in Alberta.

The administrative care of Eskimos outside of the organized provinces devolves upon the Department of Mines and Resources which, by regulative measures (including the setting aside of game preserves where only natives may hunt, and the establishment of a reindeer herd), conserves the natural resources necessary to their subsistence. Contact with the Eskimos is maintained through permanent stations (at a number of which medical officers are located) in the Eastern, Central, and Western Arctic, by patrols of the Royal Canadian Mounted Police, and by means of the annual Canadian Eastern Arctic Patrol by steamship.

\* Prepared under the direction of R. A. Gibson, Director, Lands, Parks, and Forests Branch, Department of Mines and Resources, Ottawa.

## Section 5.—Pensions and Other Provision for War Veterans.\*

The administration of returned soldiers' affairs is carried on by the Pensions Branch of the Department of Pensions and National Health. This Branch is also responsible, by direction of the Canadian Pension Commission, for certain administrative duties under the Pension Act and the Returned Soldiers' Insurance Act. The Representative of the Treasury is responsible for all payments under these Acts.

The Annual Report for the fiscal year 1939 shows an increase compared with the previous years in the number of ex-members of the Forces who received in-patient hospital treatment, the number being 12,453 as against 11,443 in 1937-38, and 11,742 in 1936-37. The Department maintains a hospital in each of eight cities throughout Canada.

One of the features of the activities of the Department is provision in a departmental institution for pensioners who, through age or infirmity, are unable to care for themselves. The number of such cases showed an increase during the year, the total on Mar. 31, 1939, being 407 as against 377 a year previously, 299 in 1937, and 286 in 1936. In the issue of orthopaedic and surgical appliances there has been a slight decrease. The number of pensioners who were granted relief was 10,732 in 1938-39, as compared with 11,179 in 1937-38 and 12,322 in 1936-37. The expenditure on relief was \$2,186,683 in 1938-39, \$2,232,398 in 1937-38, and \$2,435,285 in 1936-37.

The Department assumes responsibility in respect of accidents sustained by pensioners of 25 p.c. and upwards when engaged in industry. During the fiscal year under review, the number of claims was 455 as compared with 317 in 1937-38 and 260 in 1936-37. Expenditures, which are governed largely by the number of fatal and serious accidents, were \$77,841 in 1936-37, \$39,977 in 1937-38, and \$18,590 in 1938-39.

The disbursements of the Department (including \$994,812 for national health), amounted to \$57,592,346 in the fiscal year 1938-39. Of this, \$42,396,766 was paid as pensions, \$5,335,299 as war veterans' allowances, and \$2,198,944 as unemployment assistance. Detailed expenditures are shown in the Annual Report of the Department for 1938-39 at p. 25.

**The Canadian Pension Commission.**—By c. 45 of the Statutes of 1933, the Board of Pension Commissioners for Canada and the Pension Tribunal ceased to exist; their duties were taken over by the Canadian Pension Commission, which was formed by the Act referred to, and the personnel of the Commission was increased from three to not less than eight nor more than twelve.

The Commission is responsible for the adjudication and awarding of pensions in respect of disabilities connected with military service and the awarding of pensions to the dependants of those who die. It operates under the authority of the Pension Act. The large increase in disability pensioners from 1930 to 1933, inclusive, was due primarily to the reinstatement on pension of those who had commuted their pensions from 1920 onwards. This restoration was under the authority of an amendment to the Pension Act in 1930.

\* Revised by F. H. Brown, Assistant Secretary, Department of Pensions and National Health. See also the 1930 Year Book, pp. 982-983.

The number of medical examinations for pension purposes carried out during the fiscal year 1939 was 18,385, being a decrease of 4,278 as compared with the previous year.

**Pension Appeal Court.**—During the fiscal year 1938-39, 1,048 decisions were rendered on appeals. At the end of the fiscal year there were 211 appeals remaining unheard.

**Veterans' Bureau.**—Pursuant to legislation passed in 1930, a Veterans' Bureau was organized as a branch of the Department and came into active operation on Oct. 1, 1930. The duties of the Bureau are set forth at p. 945 of the Canada Year Book, 1932. Briefly stated, the Bureau was created and is operated to assist applicants for pension in the preparation and presentation of their cases. There is a Chief Pensions Advocate with his staff at Ottawa, and Pensions Advocates have their offices in all the principal cities of Canada. The bulk of the applications for pension are being brought to finality by thorough preparation, without the necessity of local hearings.

**War Veterans' Allowances.**—The War Veterans' Allowance Act was enacted in 1930 to provide for the maintenance of veterans who, because of age or disability, are incapable of providing for themselves. The Act provides for the payment of allowances to veterans with the requisite service, at the age of 60 years, or at any age if so disabled as to be 'permanently unemployable'.

In addition to providing for the veteran of 60 and the permanently unemployable veteran, provision is made in the Act for a further group, as a result of the deliberations of a Parliamentary Committee in 1936. This group is referred to in the Act as "those having served in a theatre of actual war who have attained the age of 55 and who, in the opinion of the Board, are incapable of maintaining themselves because of pre-ageing, disability and general unfitness".

This amendment, therefore, provides for a border-line class to include those who, from a medical standpoint, cannot be classed as permanently unemployable and who, from an age standpoint, have not quite reached the age of 60.

An outline of the provisions of the original Act will be found at pp. 946-947 of the 1932 Year Book.

### Section 6.—Soldier Settlement of Canada.†

Towards the end of the War of 1914-18 the Canadian Government organized the Soldier Settlement Board to assist eligible returned soldiers to settle on the land. By the Soldier Settlement Act of 1919 the scope of the work was extended and the Board was authorized to purchase agricultural lands in any province for returned men. At pp. 29-35 of the 1920 Year Book and at pp. 809-810 of the 1921 Year Book the earlier proceedings of the Board are described. After 1924 settlement under the Soldier Settlement Act gradually diminished and placements and after care of settlers under contractual arrangement between the Soldier Settlement Board on behalf of the Canadian Government and the British Government became the most active features of the work of the Board. In 1924 the '3,000 British Family Scheme' was arranged, by which selected families, approved by both British and Canadian authorities and having demonstrated ability to operate

\* Revised by D. S. Drew, Chief, Insurance Division, Department of Pensions and National Health.

† Revised by G. Murchison, Director of Soldier Settlement of Canada.

farms, were advanced £300 per family by the British Government and settled on Canadian farms under the direction of the Soldier Settlement Board. (See pp. 183 and 946-947 of the 1926 Year Book and pp. 7-8 of the Soldier Settlement Board Report for 1931.)

In 1927 a tripartite agreement was made between the Dominion Government, the Government of the Province of New Brunswick, and the United Kingdom Government, under which 500 British families were to be settled in the Province of New Brunswick; the Provincial Government to purchase the farms and the British Government to provide funds up to £300 per settler for establishment expenses. In more recent years the organization of the Board has taken care of applications of farmers for benefits under the Farmers' Creditors Arrangement Act, and the Supervision Staff of the Department has made land appraisals and reported on the applications of farmers under this legislation as well as under Soldier Settlement.

Under the Soldier Settlement Act of 1919, 25,001 soldier settlers were granted loans and established on the land. On Dec. 31, 1939, there were 8,646 soldier settlers and 6,071 civilian settlers who had taken over lands relinquished by former soldier settlers. At the end of 1939 the Soldier Settlement of Canada had 18,595 farm properties under administration, representing a net investment of \$40,410,050. There were 2,240 farms on hand, of which 1,958 were leased; 4,088 settlers had repaid their loans in full in cash, and 2,682 properties had been transferred to municipalities and provinces under Sect. 21A of the Soldier Settlement Act.

Under the 3,000 British Family Scheme, 3,346 families came forward for settlement. Of these, 1,837 had withdrawn as at Dec. 31, 1939, 31 had repaid their loans, leaving 1,478 families still operating their farms. Under the New Brunswick Family Settlement Agreement, 359 families came forward; of these three had repaid their loans, 196 had withdrawn, and 160 remained on the land.

The following numbers of settlers had applied for the benefits of the Farmers' Creditors Arrangement Act; 3,881 soldier settlers, 1,642 civilian settlers, and 1,666 British Family settlers. Of these applications, 2,225 cases of soldier settlers had been disposed of, involving indebtedness of \$8,686,115 and a reduction of \$3,355,930; civilians—988 cases disposed of, debt \$3,321,050, reduction \$1,245,683; British Family settlers—978 cases disposed of, indebtedness \$4,201,908, reduction \$1,988,226.

To Dec. 31, 1939, 13,709 land appraisals and reports had been made in British Columbia, Alberta, Saskatchewan, Manitoba, Ontario, and the Maritime Provinces.

Other investigational services conducted were: for the Department of Mines and Resources; in rural districts with respect to applications under the War Veteran's Allowance Act of 1930; for the Department of Pensions and National Health and the Canadian Pension Commission with respect to applications for relief allowances and special investigations of pension cases in rural districts; and for the Dependents' Allowance Board.

### Section 7.—Department of the Secretary of State.\*

The Department of the Secretary of State was constituted in its present form in 1873, through the merging of the previously existing offices of the Secretaries of State for Canada and for the provinces. The Secretary of State is the official mouthpiece of the Government as well as the medium of communication between the Dominion and Provincial Governments, all correspondence between the Governments being conducted by him with the Lieutenant-Governors. He is also the

\* Revised by E. H. Coleman, K.C., LL.D., Under Secretary of State, Department of the Secretary of State.

custodian of the Great Seal of Canada and the Privy Seal, as well as being the channel by which the general public may approach the Crown.

The Secretary of State is also the Registrar General, registering all proclamations, commissions, licences, warrants, writs, and other instruments issued under the Great Seal and the Privy Seal. He is further charged with the administration of the Boards of Trade Act, the Companies Act, the Canada Temperance Act, the Copyright Act, the Naturalization Act, the Patent Act, the Trade Unions Act, the Ticket of Leave Act, the Unfair Competition Act, the Bankruptcy Act, and with the collection and tabling of parliamentary returns. Other Acts and Regulations administered by the Secretary of State as a result of the declaration of war are: the War Charities Act, 1939; the Patents, Designs, Copyright and Trade Marks Emergency Order, 1939; and the Regulations respecting Trading with the Enemy, 1939. The Secretary of State also deals with the organization and administration of Internment Operations, the Prisoners of War Information Bureau, the Public Information Office, the Press Censorship Branch of the Censorship Co-ordination Committee, and the Voluntary Service Registration Bureau. Statistics regarding patents and copyrights appear under Chapter XVII at pp. 608-610.

**Charters of Incorporation.**—Statistics of companies incorporated under the Companies Act are given in Table 9.

### 9.—Numbers and Capitalizations of Companies Incorporated Under the Companies Act and Amending Acts, Fiscal Years 1926-39.

NOTE.—Statistics for the years 1900-25 will be found at p. 1061 of the 1938 Year Book.

<sup>1</sup> Includes consideration of the amounts of capital received on the issue of shares without nominal or par value.

**Naturalizations.**—The naturalizations effected under the Naturalization Act (R.S.C., 1906, c. 77) for the calendar years 1908-17, inclusive, are given at p. 594 of the Year Book for 1919. Since Jan. 1, 1918, the only method of obtaining naturalization has been under what is known as the 'Imperial' Naturalization Act, which came into force on Jan. 1, 1915. This Act was known under the title of the Naturalization Act, 1914, until July 7, 1919, when it was repealed and the Naturalization Act, 1919, came into force. On July 1, 1920, the Naturalization Act, 1919, was repealed, and the Naturalization Act, 1914, was revived and amended under the title of the Naturalization Acts, 1914 and 1920. By an amendment passed by Parliament in 1923, the restriction by which persons of alien enemy birth were

ineligible to receive certificates of naturalization for a period of 10 years after the termination of the War was removed. All these Acts have been consolidated in R.S.C. 1927, c. 138. At the present time any alien may apply for naturalization, regardless of his nationality, but, according to Sect. 4, Part II of the Act, the granting of a certificate of naturalization to any alien is left entirely to the discretion of the Minister, who may, without assigning any reason, give or withhold the certificate as he thinks most conducive to the public good. Since Jan. 15, 1932, female British subjects, marrying aliens, retain British nationality, unless they, by marriage, acquire their husbands' nationalities, and the wives of aliens no longer become British subjects through their husbands' naturalization. They must apply to the Secretary of State.

Table 10 shows the number of naturalization certificates issued to single persons or heads of families under these Acts during the calendar years from 1929 to 1938. The total numbers of persons naturalized during the fiscal years 1938 and 1939, were 27,455 and 21,418, respectively, including (except as stated above) the wives and minor children of those to whom naturalization certificates were issued.

## Section 8.—Royal Canadian Mounted Police.\*

The Royal Canadian Mounted Police is a constabulary maintained by the Dominion Government. It was organized in 1873, and was known as the North West Mounted Police, whose duties were confined to what were then known as the North West Territories. In 1904, its name was changed to Royal North West Mounted Police.

In 1905, when Alberta and Saskatchewan were constituted provinces, an arrangement was made whereby the Force continued to discharge its duties as formerly, each province making a contribution towards defraying the cost. This was continued until 1917. Soon after the close of the War of 1914-18, an extension of Governmental activities made it obvious that the enforcement of Dominion Statutes was assuming increasing proportions, and that it would soon be necessary to have a police force responsible therefor. In 1918, the Royal North West Mounted Police was assigned the duty of the enforcement of Dominion legislation for the whole of Western Canada west of Port Arthur and Fort William, and in 1920 for the whole of Canada.

In 1920, the name of the Force was changed to the Royal Canadian Mounted Police, and the former Dominion Police with headquarters at Ottawa, whose duties were connected largely with guarding public buildings in that city and the Canadian Government dockyards at Halifax, N.S., and Esquimalt, B.C., were absorbed by the Royal Canadian Mounted Police.

At the present time, the R.C.M. Police is responsible throughout Canada for the enforcement of the laws against smuggling by land, sea, and air. It enforces the provisions of the Excise Act, is responsible for the suppression of the traffic in narcotic drugs and for the enforcement of the Migratory Birds Convention Act, and assists the Mines and Resources, Fisheries, and several other Dominion Departments, in executing the provisions of their respective Acts and, in some cases, in administrative duties. It is responsible for the protection of government buildings and dockyards. It is the sole police force operating in the Yukon Territory and the Northwest Territories, and performs a variety of services in all provinces and both Territories for the Dominion Government.

Under the R.C.M. Police Act, any province may enter into an agreement with the Dominion Government for the services of the Royal Canadian Mounted Police, to enforce provincial laws and the Criminal Code, upon payment for its services. At the present time such agreements are in force with the Provinces of Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan, and Alberta.

The Force is controlled and administered by a Minister of the Crown (at present the Minister of Justice) and may be employed anywhere in Canada. From a force of 300 in 1873, the strength on Dec. 31, 1939, was 3,875. Its means of transport at the latter date consisted of 150 horses, 538 motor vehicles, 271 sleigh dogs and 16 police dogs. The Force is organized into 13 divisions of varying strength distributed over the entire country. The term of engagement is five years for recruits, with re-enlistment for a period not exceeding five years. The Officers are commissioned by the Crown. Recruits are trained at Regina, Sask. The course

\* Revised by Commissioner S. T. Wood, Royal Canadian Mounted Police.

of training is six months and consists of drill, both mounted and dismounted, and physical training, including instruction in wrestling, boxing, and ju-jutsu. Special attention is paid to police duties, both Dominion and provincial, and detailed lectures are given. Instructional courses for promotion are held, and, where practicable, an annual refresher course of training is given.

In 1937, a "Reserve" strength of 300 men was authorized by Parliament. Since that time, required reserves have been sought principally in large centres, such as Toronto and Winnipeg, where men can be congregated easily and where instruction can be given in the evenings.

As the duties of the Force have increased greatly since the outbreak of war in September, 1939, authority was granted the Commissioner to re-engage 500 ex-members of the Force and 2,500 special constables, if required. The Commissioner of the Royal Canadian Mounted Police is the Registrar General of Enemy Aliens in Canada, and the guarding of vulnerable points throughout the Dominion rests largely upon the Canadian Militia and the Royal Canadian Mounted Police. The Royal Canadian Mounted Police has furnished one Provost Company, comprising approximately 120 men, to the Canadian Active Service Force.

## Section 9.—The Civil Service of Canada.

**Organization.\***—Prior to 1882, appointments to the Civil Service were made directly by the Government. In that year, a Board of Civil Service Examiners was appointed to examine candidates and issue certificates of qualification to those successful at examinations. Appointments, however, were still made by the Government of the day.

The Royal Commission of 1907, appointed to inquire into the Civil Service Act and its operation, reported in favour of the creation of a Civil Service Commission. This body was established in 1908; it consisted of two members appointed by the Governor in Council and holding office during good behaviour, but removable by the Governor General on address of the Senate and House of Commons. The Civil Service was classified into three divisions under the Deputy Heads of Departments, each division consisting of two subdivisions, each of these having its scale of salaries. The Commission was charged with: the organization of, and appointments to, the Inside Service (at Ottawa), certain appointments to be made after open competition and others after qualifying tests; and the holding of qualifying examinations for the Outside Service (the Service apart from Ottawa) to obtain lists from which selections could be made by the various Departments. All British subjects between 18 and 35 years of age who had resided in Canada for three years were eligible to try these examinations.

In 1918, a third member of the Civil Service Commission was appointed and, by the Civil Service Act of that year, the principle of appointment after open competition was applied to the Outside as well as the Inside Service. The Act also provided for the organization by the Commission of the various Government Departments, for a classification of all positions in the Service on a duties basis, for the establishment of new rates of compensation, and for the principle of promotion by merit wherever consistent with the best interests of the Service. Provision

---

\* Revised by Miss E. Saunders, Secretary, Civil Service Commission, Ottawa.

was also made for preference, in the matter of appointment to the Service, to be given to qualified applicants who had served in the War of 1914-18.

Subsequent amendments have removed from the Commission's jurisdiction some branches of the Service, such as skilled and unskilled labour positions, and the staffs of certain units.

**Civil Service Statistics.\***—Since April, 1924, a monthly return of personnel and salaries has been made by each Department to the Dominion Bureau of Statistics, according to a plan that ensures comparability between Departments and continuity in point of time. The institution of this system was preceded by an investigation covering all years back to 1912.

From 1914 to 1920, (as will be seen from Table 11) the number of employees increased very rapidly, as a result of the extension of the functions of government and of the imposition of new taxes, which necessitated additional officials as collectors. Such new services as the Department of Pensions and National Health and the Soldier Settlement Board were also created. The maximum was reached in January, 1920, when 47,133 persons were employed; this number has since decreased to 45,437 in January, 1939. It may be added that, out of 46,106 in March, 1939 (see Table 12), 1,291 in the Income Tax Branch and 2,335 in the Department of Pensions and National Health, or 3,626 in all, were engaged in services of outstanding importance that had no existence before the War of 1914-18. Further, 12,518 persons were, in March, 1939, employed in the Post Office Department, performing services of an industrial rather than of a governmental type, and receiving their salaries out of payments made by the public for services immediately rendered rather than out of taxation.

\* Revised by Col. J. R. Munro, Chief of the Finance Branch, Dominion Bureau of Statistics.

# 11.—Civil Service Employees (Permanent and Temporary), Together with Total Salaries, in January of the Years 1925-39.

NOTE.—These figures do not include persons in the "non-enumerated classes" whose numbers cannot be supplied monthly. Moreover, the figures shown below are not comparable with those for earlier years shown at p. 1100 of the 1939 Year Book because various classes of employees (part-time, seasonal, etc.) formerly omitted are now included.

### Section 10.—Supervision of Race-Track Betting.

By an amendment to Sect. 235 of the Criminal Code, passed in 1920, the supervision of race-track betting, under the pari-mutuel system, was placed in the hands of the Minister of Agriculture; the system was operated for the first time during the racing season of 1921. The actual supervision is carried out by officers of the Royal Canadian Mounted Police. Statistics are available from the year 1924.

### Section 11.—The Tariff Board.\*

The Tariff Board was constituted by Act of Parliament in 1931 (c. 55, 21-22 Geo. V). It consists of three members (a Chairman, a Vice-Chairman, and a Member) and a secretary, all appointed by the Governor in Council.

The Board makes inquiry into and reports upon any matter in relation to goods that, if brought into Canada or produced in Canada, are subject to or exempt from duties of customs or excise and on which the Minister of Finance desires information. The investigation into any such matter may include inquiry as to the effect that an increase or decrease of the existing rate of duty upon a given commodity might have upon industry or trade, and the extent to which the consumer is protected from exploitation.

It is also the duty of the Board to inquire into any other matter in relation to the trade or commerce of Canada that the Governor in Council sees fit to refer to the Board for inquiry and report.

The Act provides that reports shall be made to the Minister of Finance, and tabled in the House of Commons. The principal commodities reported on are: wool textiles; boots and shoes; jute yarns and twines; fruits and vegetables; hookless fasteners (zippers); wooden doors; silver-bearing articles (toiletware); rabbit skins; brass, copper, and nickel-silver commodities; boiler tubes; skelp; hats and hoods; biscuits; cork boards, slabs, and planks; crude petroleum and its derivatives; artificial silk yarns, cotton yarns and fabrics; plastics of all kinds; steel wool; certain sporting goods, etc. In 1939 reports were made on the radio industry; animal and vegetable oils, fats, and greases; cigars; coke; worsted weaving yarn; cocoa-fibre mats and matting; starches and dextrines; automobiles and furniture.

The Board also hears and decides appeals from rulings made by the Department of National Revenue with respect to fair market value of goods for duty purposes, erroneous appraisals, and the rate of duty applicable to any class of goods. Under Order in Council the Board has authority and power: (1) to declare or find, with respect to any importation, whether the goods are "of a class or kind made or produced in Canada"; (2) to review the value for duty applied by the Customs to new or unused goods under provisions of Sect. 36 of the Customs Act and make its findings with regard thereto; (3) to determine and declare whether any and, if so, what drawback of Customs duty is payable under the provisions of Schedule B of the Customs Tariff.

### Section 12.—Dominion Trade and Industry Commission.†

The Dominion Trade and Industry Commission was constituted by Act of Parliament in 1935 (c. 59, 25-26 Geo. V). It consists of three Commissioners, one of whom is the Chief Commissioner and another the Assistant Chief Commissioner. The Act provides that, for the time being, the members of the Tariff Board (see Sect. 11) shall be the Commissioners, and the Chairman and Vice-Chairman of the Tariff Board shall be the Chief Commissioner and Assistant Chief Commissioner, respectively. The administration of the Act is vested in the Minister of Trade and Commerce.

\* Revised by James R. MacGregor, Secretary, Tariff Board.

† Revised by James R. MacGregor, Secretary, Dominion Trade and Industry Commission.

Duties of the Commission consist of: investigating and recommending the prosecution of offences against Acts of Parliament relating to commodity standards; preparation of draft specifications for commodity standards; application of the national trade mark "Canada Standard" to commodities that conform to specifications established under any Act of Parliament; investigation of complaints respecting unfair trade practices, and recommending the prosecution of offenders against any Dominion law prohibiting unfair trade practices; the convening of conferences for the purpose of considering commercial practices prevailing in industry, and determining what practices are unfair or undesirable in the interest of the industry or the public. Offences against Acts of Parliament or regulations relating to commodity standards and unfair trade practices are reported by the Commission to the Attorney General of Canada with a recommendation for prosecution.

In 1939, an amendment to the Act was passed making it possible to establish standards that were not then provided for by any existing Act of Parliament. Regulations for marking material content on hosiery were established and passed by Orders in Council, dated July 27 and Aug. 2, 1939. A request had been received from the Canadian Woollen and Knit Goods Manufacturers' Association for hosiery-content regulations and, after a full investigation by the Commission, standards were established. These standards came into force and were effective, in so far as manufacturers and importers of hosiery are concerned, on Feb. 1, 1940, and will be effective, in so far as jobbers, wholesalers, and retailers are concerned, on and after Feb. 1, 1941.

### Section 13.—Other Miscellaneous Administration.

In previous editions of the Year Book this chapter has been brought to a close with outlines of Dominion Government administration as follows: the International Joint Commission; the Geodetic Survey of Canada; the Topographical Survey; the Dominion Observatories. These are not repeated in this edition.

The purpose of establishing the Department of Mines and Resources in 1936 was to correlate the efforts of the staffs of such older Departments as had, in the course of time, acquired overlapping features, or that could be administered more economically under one head without impairing the usefulness of necessary services.

New Departments and several special and administrative commissions have been organized as part of Canada's War Effort; in addition, new functions have been assumed by many of the older Departments. These are described in detail in the Introduction to the present volume.

Certain phases of Dominion Government activity, such as the operations of the International Joint Commission and certain specialized activities of the Department of Mines and Resources, were treated in the 1930 edition of the Year Book, as follows:—

International Joint Commission, pp. 1014-1015;  
Geodetic Survey of Canada, p. 1015;  
Topographical Survey, p. 1016;  
Dominion Observatories, p. 1017.

# CHAPTER XXIX.—SOURCES OF OFFICIAL STATISTICAL AND OTHER INFORMATION RELATIVE TO CANADA.

## CONSPECTUS.

	PAGE.		PAGE.
SECTION 1. THE DOMINION BUREAU OF STATISTICS.....	1079	SECTION 4. PUBLICATIONS OF PROVINCIAL GOVERNMENTS.....	1101
SECTION 2. ACTS ADMINISTERED BY DOMINION DEPARTMENTS.....	1093	SECTION 5. REPORTS OF DOMINION AND PROVINCIAL ROYAL COMMISSIONS, TOGETHER WITH A SELECTION OF REPORTS OF BRITISH ROYAL COMMISSIONS HAVING A BEARING ON CANADA.....	1108
SECTION 3. PUBLICATIONS OF DOMINION DEPARTMENTS.....	1095		

The chief source of information on the current state of the country is the Dominion Bureau of Statistics, organized as the central statistical bureau for Canada, and described in Section 1. Section 2 contains a list of the Acts of Parliament administered by the several Departments of the Dominion Government, and Section 3 a bibliography of the publications of these Departments. This is followed, in Section 4, by a bibliography of the publications of Provincial Governments, and by a list of Royal Commissions appointed by the Dominion or the provinces as well as British Royal Commissions concerned with Canada, given in Section 5.

### Section 1.—The Dominion Bureau of Statistics.\*

The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (8-9 Geo. V, c. 43).† The Act was a consolidation of all previous statistical legislation and was based on the report of a Commission on Statistics, appointed in 1912, which recommended (1) a series of specific reforms and enlargements in Canadian statistics, and (2) a policy of statistical co-ordination for the Dominion, under central direction. In 1915, following the recommendations in this report, the office of Dominion Statistician was created but, as stated, it was not until 1918 that the recommendations of the Commission were embodied in legislation. Among its many provisions the following are indicated:—

3. There shall be a bureau under the Minister of Trade and Commerce, to be called the Dominion Bureau of Statistics, the duties of which shall be to collect, abstract, compile and publish statistical information relative to the commercial, industrial, social, economic and general activities and condition of the people, to collaborate with all other departments of the Government in the compilation and publication of statistical records of administration according to the regulations, and to take the Census of the Dominion as hereinafter provided.

. . . . .

9. (1) The Minister may enter into any arrangement with the government of any province providing for any matter necessary or convenient for the purpose of carrying out or giving effect to this Act, and in particular for all or any of the following matters:—

- (a) The execution by provincial officers of any power or duty conferred or imposed on any officer under this Act or the regulations;
- (b) The collection by any provincial department or officer of any statistical or other information required for the purpose of carrying out this Act; and,
- (c) The supplying of statistical information by any provincial department or officer to the Dominion Statistician.

. . . . .

\* A more complete account of the formation and activities of the Bureau of Statistics will be found at pp. 961-964 of the 1922-23 Year Book.

† Consolidated as the Statistics Act (c. 190, R.S.C., 1927).

15. (1) No individual return, and no part of an individual return, made, and no answer to any question put, for the purposes of this Act, shall, without the previous consent in writing of the person or of the owner for the time being of the undertaking in relation to which the return or answer was made or given, be published, nor, except for the purposes of a prosecution under this Act, shall any person not engaged in connection with the Census be permitted to see any such individual return or any such part of any individual return.

(2) No report, summary of statistics or other publication under this Act shall contain any of the particulars comprised in any individual return so arranged as to enable any person to identify any particulars so published as being particulars relating to any individual person or business.

33. Subject to the direction of the Minister, the Bureau shall collect, abstract and tabulate annually, statistics in relation to all or any of the following matters: (a) Population; (b) Births, Deaths and Marriages; (c) Immigration and Emigration; (d) Agriculture; (e) Education; (f) Public and Private Finance; (g) any other matters prescribed by the Minister or by the Governor in Council.

As first established\* the Bureau included, by transfer or absorption, the following divisions: (1) the Census and Statistics Office (covering the census, and also agriculture, general manufactures, and judicial statistics), (2) Fisheries Statistics, (3) Mining Statistics, (4) Forestry Statistics, (5) Dairying and Fruit Statistics, (6) Water- and Electric-Power Statistics, (7) the Railways and Canals Statistical Branch of the Department of Railways and Canals, (8) the Trade Statistical Branch (Exports and Imports), (9) Grain Trade Statistics, (10) Live-Stock Statistics, (11) Prices Statistics, and (12) Employment Statistics. In addition, four new branches were created, dealing, respectively, with Public Finance, Internal Trade, Vital Statistics, and Education.

Since its organization in 1918, the Bureau has created out of these many heterogeneous units a unified, nation-wide statistical system in which the correlation of the several subjects and their interpretation from a comprehensive national viewpoint has been the primary objective. By means of Dominion-Provincial statistical conferences held from time to time, a useful degree of co-operation and uniformity of statistical classification and method has been achieved and progress along these lines continues. These main advantages of statistical centralization have not only been substantially attained, but the treatment of statistics, not merely as aggregations of figures, but as primary data from which complex social and economic phenomena may be interpreted, has been emphasized. This view of a true national statistic as revealing the controlling economic forces that operate and their interplay, and the value of such a statistic in administrative planning along national lines, involves, of course, an added function of the Bureau, viz., its usefulness as a national laboratory for economic and social research. This is a development that, as yet, is in its infancy but the foundation of such a service, comparable with the increasing importance of Canada in the economic and political world, has already been laid.

As now organized, the Branches of the Dominion Bureau of Statistics are: I. Administration; II. Demography—Census and Vital Statistics; III. Agricultural Statistics; IV. Fisheries and Animal Products; V. Mining, Metallurgical and Chemical; VI. Forestry and Allied Industries; VII. General Manufactures; VIII. External Trade (Imports and Exports); IX. Internal Trade; X. Construction; XI. Transportation and Public Utilities; XII. Financial Statistics; XIII. Judicial Statistics; XIV. Education Statistics; XV. Census of Institutions; XVI. Census Analysis and Social Statistics. An organization chart showing the relationship of the Branches and the divisions of their work is given at pp. 1144-1145 of the 1934-35 Year Book.

\* See the first Annual Report of the Dominion Statistician, for the fiscal year ended Mar. 31, 1919.

While primarily serving the Government, the Bureau realizes that, in a democratic community, every citizen is a part of the Government and should be well informed regarding the social and economic conditions of his country. Accordingly, the Bureau furnishes to all applicants answers to all manner of questions on all sorts of topics. In particular, it supplies to business men of all classes information regarding business conditions and statistics regarding production, imports, exports, prices, stocks, etc., of all kinds of commodities, thus enabling them to direct their operations more effectively to their own greater advantage and to the greater advantage of Canada. Special tabulations may be made, or other investigations carried out at a fee based only on the extra clerical costs to the Bureau.

**Publications.**—Items in the vote of the Bureau, passed by Parliament each year, provide limited funds for the printing and processing of reports and bulletins. Reports printed from type are set up by the King's Printer, but the Bureau itself operates its own contact printing presses and all processed reports and bulletins are completely printed as well as published by the Bureau of Statistics.

The present policy with regard to the distribution of publications is based on sales to the public at actual cost of paper and presswork only; compilation, editing, and other overhead costs are not included. The object is to extend the service to the public as widely as possible and so spread the compilation and overhead which are the big items in total costs. A special subscription rate of \$30 per year entitles the payer to receive a copy of each publication as issued, with the exception of news bulletins. Other special rates are set for series of publications in related groups; these are referred to in the respective sections of the list following.

Applications for reports should be sent to the Bureau of Statistics; they should indicate the individual publication or series of reports in which the applicant is interested and include the necessary remittance in the form of a cheque or money order made payable to the Receiver-General of Canada, Ottawa.

#### ADMINISTRATION—

Annual Report of the Dominion Statistician. (Included in the Annual Report of the Department of Trade and Commerce, *Price 25 cents.*)

#### POPULATION—

##### I. CENSUS.

###### (A) *Report of the Seventh Census of Canada, 1931:—*

- Vol. I. General—Administrative Report of the Seventh Census followed by a summary of the leading facts of the Censuses of Population and Agriculture, Institutions, Merchandising and Service Establishments, etc., and cross-analyses relating thereto. The Appendix gives a complete bibliography of census materials and reproduces the more salient figures for specified years, chronologically arranged, back to 1605. The volume also contains a series of life tables for the Dominion and each province. *Price, Cloth \$1.50, Paper \$1.*
- Vol. II. Population by Local Subdivisions—Conjugal condition, racial origin, religion, birthplace, year of immigration, language, literacy, school attendance, etc. *Price, Cloth \$1.50, Paper \$1.*
- Vol. III. Ages of the People—Classified by sex, conjugal condition, racial origin, religion, birthplace, language, literacy, year of immigration, naturalization, etc. *Price, Cloth \$1, Paper 75 cents.*
- Vol. IV. Birthplace, Racial Origin, and Year of Immigration of the People—Classified and cross-classified by conjugal condition, naturalization and citizenship, religion, language, literacy, school attendance. *Price, Cloth \$1, Paper 75 cents.*
- Vol. V. Earnings of Wage-Earners, Dwellings, Households, Families, Blind and Deaf-Mutes—Cross-classified by birthplace, conjugal condition, year of immigration, naturalization and citizenship, racial origin, religion, language, literacy, school attendance. *Price, Cloth \$1, Paper 75 cents.*
- Vol. VI. Unemployment—Classified by industry, occupation, cause, age, sex, conjugal condition, period of idleness, birthplace, racial origin, year of immigration. *Price, Cloth \$1, Paper 75 cents.*

**POPULATION—continued.****I. CENSUS—continued.****(A) Report of the Seventh Census of Canada, 1931—concluded.**

Vol. VII. Occupations and Industries—Cross-classified by birthplace, race, age, sex, etc. *Price, Cloth \$1, Paper 75 cents.*

Vol. VIII. Agriculture—Agricultural population, farm holdings and land area, tenure, value of farm property and farm products, acreage and yields of crops, live stock, mortgage indebtedness and farm expenses, farm machinery, facilities and roads, co-operative marketing, etc. *Price, Cloth \$1, Paper 75 cents.*

Vol. IX. Institutions—Hospitals for the Sick—Type, bed capacity, facilities, movement of patient population, personnel, capital investment, maintenance, receipts and expenditures, etc.; Mental Hospitals—Movement of patient population and their psychoses, age, nativity, racial origin, economic condition, conjugal condition, environment, literacy, religion, administration and personnel, etc.; Charitable and Benevolent Institutions—Type, movement of population, finances, inmates, age, sex, administration and personnel, etc.; Penitentiaries and Corrective and Reformatory Institutions—Inmates, offences, sentences, age, birthplace, citizenship, racial origin, previous employment, environment, educational status, conjugal condition, social habits, overseas service, administrative staff, receipts and expenditures. *Price, Cloth \$1, Paper 75 cents.*

Vols. X and XI. Merchandising and Service Establishments—Retail merchandise trade cross-classified by kind of business, type of operation, size of business, employees, salaries and wages, capital investment, rent and other operating expenses, credit, etc.; wholesale trade cross-classified by type of establishment, kind of business, operating expenses, etc.; with special reports on retail trade in urban and rural areas, chain stores, food retailing, drug stores, hotels, moving picture theatres, co-operative marketing and purchasing, etc. *Price, Cloth \$1, Paper 75 cents, each Volume.*

Vols. XII and XIII. Census Monographs—Consisting of a series of studies of outstanding Canadian problems as follows: (1) Population Growth; (2) Age Distribution of the Canadian People; (3) Fertility of the Population of Canada; (4) Racial Origins and Nativity of the Canadian People; (5) Illiteracy and School Attendance in Canada; (6) Rural and Urban Composition of the Canadian People; (7) The Canadian Family; (8) Housing and Rentals in Canada; (9) Dependency of Youth; (10) Occupational Structure of the Canadian People; (11) Unemployment; (12) Population Basis of Agriculture; (13) Canadian Life Tables, 1931. Nos. 4, 5, 6, 7, 9, 11, and 13 are already published as separates; the remainder are in course of preparation. *Price of each monograph, 35 cents, except Nos. 11 and 13, which are 50 cents each.*

**AGRICULTURE.—**

Farm population, areas, tenure, values, facilities and live stock; value of field crops, vegetables, fruits, and forest products: published separately for each province. *Price 25 cents each.*

**(B) Bulletins of the Seventh Census of Canada, 1931:—**

(1) **POPULATION.—Final Bulletins.**—(XI) Rural and Urban Population for Canada and Provinces. (XIII) Cities, Towns and Villages in Canada, by Provinces. (XVI) Ages, by Provinces. (XIX) Radio Sets in Canada, 1931. (XXVI) Age Distribution by Single Years of Age for Canada, by Provinces, 1931. (XXVII) Immigrant Population Classified by Sex, Country of Birth, Province of Residence, Years of Arrival in Canada, and Citizenship of the Foreign Born, 1931. (XXVIII) Gainfully Employed Ten Years of Age and Over, Classified According to Occupation and Sex for Cities of 30,000 and Over, 1931. (XXIX) Birthplace of the Population Classified According to Nativity of Parents for Canada and Provinces, 1931. (XXX) Canadians and Other Nationals. (XXXI) Gainfully Employed Ten Years of Age and Over for Canada and Provinces, 1931. (XXXII) Literacy, Language Spoken, and Conjugal Condition of the Population Ten Years of Age and Over, 1931. (XXXIII) Earnings Among Wage-Earners for Canada and Provinces, 1931. (XXXIV) Ages of the Gainfully Employed Ten Years of Age and Over, for Canada and Provinces, 1931. (XXXVII) Age Distribution by Five-Year Age Groups for Cities, Towns, and Villages of 5,000 Population and Over, 1931. (XXXVIII) Population of the Municipal Wards of Montreal City by Quinquennial Age Groups, Conjugal Condition, Birthplace, Racial Origin, Religion, School Attendance and Literacy, by Sex, 1931. (XXXIX) Houses and Dwellings. (XL) Population of the Municipal Wards of the Cities of Toronto, Vancouver, Winnipeg, Hamilton, Quebec, and Ottawa by Quinquennial Age Groups, Conjugal Condition, Birthplace, Racial Origin, Religion, School Attendance and Literacy, by Sex, Census of 1931. (XLI) Orientals, Ten Years of Age and Over, Gainfully Employed by Race, Occupation, and Sex, in British Columbia, 1931. (XLII) Persons Speaking Gaelic. (XLIII) Blind. (XLIV) Deaf Mutes. (XLV) Racial Origins of Gainfully

## II. AGRICULTURE—concluded.

(3) *Live-Stock and Animal Products*—concluded.

Principal Cities of Canada, *Price 50 cents per year*; (d) Monthly Review of Dairy Production, *Price \$1 per year*; (e) Annual Estimates of the Consumption of Meats, Poultry, Butter, Cheese, and Eggs, *Price 15 cents*; (f) Annual Report on Dairying Statistics of Canada, *Price 25 cents*; (g) Annual Surveys of Live Stock and Poultry at June 1 and Dec. 1, *Price 25 cents*; (h) Annual Report on Production of Poultry and Eggs, *Price 25 cents*; (i) Annual Summary of Cold Storage Holdings, *Price 25 cents*; (j) The Dairy Situation in Canada (quarterly), *Price \$1 per year*.

(4) *Other*—Monthly Report on Raw and Refined Sugar (visible supply, meltings, shipments, exports, and imports), *Price \$1 per year*. Annual Summary of Sugar Reports. Annual Reports on the Production and Value of Honey and Beeswax. Annual Report on Maple Products. Report of the Conference on Agricultural Statistics, Ottawa, Mar. 30-Apr. 2, 1936.

NOTE.—Subscription price for all publications of the Agricultural Branch, \$10 per year.

## III. FURS.

Advance Report on Fur Farms, *Price 10 cents*. Annual Report on Fur Farms, *Price 25 cents*. List of Companies, Firms, and Individuals Engaged in Fur Farming in Canada, *Price \$5*. Advance Bulletin on Statistics of the Production of Raw Furs, *Price 10 cents*. Annual Bulletin on the Production of Raw Furs (comprising the pelts taken by trappers and those sold from fur farms), *Price 25 cents*.

## IV. FISHERIES.

Annual Report on Fisheries Statistics, *Price 50 cents*. Advance Bulletins on Fish Caught and Marketed, by Provinces: Prince Edward Island, *Price 10 cents*; Nova Scotia, *Price 10 cents*; New Brunswick, *Price 10 cents*; Quebec, *Price 10 cents*; Ontario, The Prairie Provinces, and Yukon, *Price 10 cents*; British Columbia, *Price 10 cents*; Canada, *Price 10 cents*.

## V. FORESTRY.

Annual Summary of the Value, etc., of Forest Production (includes operations in the woods for sawmills, shingle mills, pulp and paper mills, etc., production of mining timber, production of poles and cross ties, and farm production of firewood, posts, etc.), *Price 25 cents*.

[See also Reports on Manufactures of Forest Products listed under "Manufactures", Section VII, Subsection (5).]

## VI. MINERAL PRODUCTION (MINING AND METALLURGY).

- (1) *General*—(a) Annual Report on the Mineral Production of Canada, *Price 50 cents*; (b) Preliminary Report (semi-annual) on the Mineral Production of Canada, *Price 25 cents*; (c) Monthly Reports on Leading Minerals—reports on gold, petroleum-natural gas production, cement-clay products, *Yearly subscription \$1 per report*; Reports on silver, gypsum, salt, asbestos, feldspar, *Yearly subscription 50 cents per report*; (d) Preliminary Estimate of Canada's Mineral Production, *Price 25 cents*.
- (2) *Coal*—(a) Annual Report on Coal Statistics for Canada, *Price 50 cents*; (b) Monthly Summary Report on Coal and Coke Statistics for Canada, *Price \$1 per year*; (c) Quarterly Report on Coal and Coke Statistics for Canada, *Price 50 cents per year*.
- (3) *Annual Bulletins on Mining*—Metals—The Gold-Mining Industry in Canada (including alluvial gold mining, auriferous quartz mining, copper-gold-silver mining, and tables showing Canadian and world production of gold), *Price 50 cents*. The Silver-Mining Industry in Canada (including silver-cobalt-arsenic mining, silver-lead-zinc mining, and tables showing Canadian and world production of arsenic, cobalt, lead, silver, and zinc), *Price 25 cents*. The Nickel-Copper Mining, Smelting and Refining Industry (including Canadian and world production of nickel, platinum metals, and copper), *Price 25 cents*. The Production of Miscellaneous Metals (including aluminium, antimony, barium, beryl, bismuth, cadmium, calcium, chromite, lithium, magnesium, manganese, mercury, molybdenite, radium, selenium, tin, titanium, tungsten), *Price 50 cents*. The Non-Ferrous Smelting and Refining Industry, *Price 25 cents*. The complete Mining Series of Reports (with the exception of Coal), *Price \$7*.

Non-Metals—Abrasives, *Price 15 cents*; Asbestos, *Price 25 cents*; Feldspar and Quartz, *Price 25 cents*; Gypsum, *Price 25 cents*; Iron Oxides, *Price 15 cents*; Mica, *Price 25 cents*; Natural Gas, *Price 25 cents*; Petroleum, Crude, *Price 25 cents*; Salt, *Price 25 cents*; Talc and Soapstone, *Price 15 cents*; Miscellaneous Non-Metallic Minerals (including actinolite, barytes, bituminous sands, fluorspar, graphite, magnesite-dolomite, magnesium sulphate, bog manganese, mineral waters, peat, phosphate, silica brick, sodium carbonate, sodium sulphate, sulphur-pyrites), *Price 25 cents*.

## PRODUCTION—continued.

### VI. MINERAL PRODUCTION (MINING AND METALLURGY)—concluded.

#### (3) Annual Bulletins on Mining—concluded.

Structural Materials—The Cement Industry, *Price 25 cents*; Clay and Clay Products, *Price 25 cents*; Lime, *Price 25 cents*; Sand and Gravel, *Price 25 cents*; Stone, *Price 50 cents*.

[See also Reports on Iron and Steel and Their Products, Manufactures of Non-Ferrous Metals, Manufactures of Non-Metallic Minerals, and Chemicals and Allied Products listed under "Manufactures", Section VII, Subsections (6), (7), (8), and (9).]

NOTE.—Subscription price for all Mining, Metallurgical and Chemical Reports [including Reports under groups (6), (7), (8) and (9), pp. 1087-1088] \$15 per year.

### VII. MANUFACTURES.

- (1) *General*—General Report on the Manufacturing Industries of Canada, *Price 50 cents*. Geographical Distribution of the Manufacturing Industries of Canada, *Price 50 cents*; also Reports for the Provinces and Leading Cities: Quebec, *Price 25 cents*; Ontario, *Price 25 cents*; British Columbia, *Price 25 cents*; Prairie Provinces, *Price 25 cents*; Maritime Provinces, *Price 25 cents*. Alphabetical List of Products (annual report); Quantity of Manufacturing Production in Canada, 1923-29; Weekly Earnings of Male and Female Wage-Earners Employed in the Manufacturing Industries of Canada, 1934-36, *Price 25 cents*.
  - (2) *Manufactures of Vegetable Products*—General Report on Manufactures of Vegetable Products, *Price 50 cents*. Annual bulletins as follows: (a) Coffee, Tea, Spices and Miscellaneous Foods, *Price 25 cents*; (b) Fruit and Vegetable Preparation, including Canning, Evaporating and Preserving, and Pickles, Sauces, Vinegar and Cider, *Price 25 cents*; (c) Flour and Grist Mill Products, *Price 25 cents*; (d) Bread and Other Bakery Products, *Price 25 cents*; (e) Biscuits and Confectionery, including Cocoa and Chocolate, *Price 25 cents*; (f) Macaroni and Vermicelli, *Price 15 cents*; (g) Distilled Liquors, *Price 25 cents*; (h) Breweries, *Price 25 cents*; (i) Wine, *Price 25 cents*; (j) Rubber Industry, *Price 25 cents*; (k) Prepared Breakfast Foods, *Price 15 cents*; (l) Sugar Refineries, *Price 25 cents*; (m) Tobacco Products, *Price 25 cents*; (n) Linseed Oil and Soya Bean Oil, *Price 15 cents*; (o) The Canned Foods Industry, *Price 25 cents*; (p) Ice Cream, *Price 15 cents*; (q) Pack of Fruits and Vegetables, (preliminary), *Price 10 cents*; (r) Stocks of Unmanufactured Tobacco on Hand, (quarterly report), *Price \$1 per year*; (s) Stocks of Canned Fruits and Vegetables, (quarterly report), *Price \$1 per year*; (t) Aerated and Mineral Waters, *Price 25 cents*; (u) Stock and Poultry Foods, *Price 25 cents*.
  - (3) *Animal Products and Their Manufactures*—Annual Report as follows: The Dairy Factory Industry, *Price 25 cents*. Annual bulletins: (a) Slaughtering and Meat Packing and Sausage and Sausage Casings, *Price 25 cents*; (b) Process Cheese, *Price 10 cents*; (c) Leather Tanneries, *Price 25 cents*; (d) Miscellaneous Leather Goods, Leather Belting, Leather Boot and Shoe Findings, *Price 25 cents*; (e) Leather Boots and Shoes, *Price 25 cents*; (f) Leather Gloves and Mittens, *Price 20 cents*; (g) Fur Goods and Fur Dressing, *Price 25 cents*. Monthly bulletin on Boot and Shoe Production, *Price \$1 per year* (including annual). Monthly bulletin on Concentrated Milk Products, *Price \$1 per year* (including annual report on the dairy factory industry).
- (See also Reports on Live Stock, etc., listed under "Agriculture".)
- (4) *Textile and Allied Industries*—General Report on the Textile Industries of Canada, *Price 50 cents*. Annual Bulletins as follows: (a) Cotton Textiles (cloth, yarn, thread, and waste), *Price 50 cents*; (b) Woollen Textiles (cloth, yarn, waste, carpets, and woollen goods, n.e.s.), *Price 50 cents*; (c) The Silk Industry, *Price 25 cents*; (d) Men's Factory Clothing, including men's furnishings, *Price 25 cents*; (e) Women's Factory Clothing, *Price 25 cents*; (f) Hats and Caps, *Price 25 cents*; (g) Hosiery and Knitted Goods, *Price 25 cents*; (h) Oiled Clothing and Waterproofs, *Price 15 cents*; (i) Cordage, Rope and Twine, *Price 15 cents*; (j) Corsets, *Price 15 cents*; (k) Cotton and Jute Bags, *Price 15 cents*; (l) Dyeing and Finishing of Textiles, *Price 15 cents*; (m) Awnings, Tents and Sails, *Price 15 cents*.
  - (5) *Manufactures of Forest Products*—Printed Reports, *Price 50 cents each*: (a) The Lumber Industry; (b) The Pulp and Paper Industry; (c) Wood-Using Industries; (d) Paper-Using Industries. Annual bulletins: (a) The Lumber Industry, *Price 35 cents*; (b) Lumber Distribution in Canada and the United States (biennial), *Price 35 cents*; (c) The Pulp and Paper Industry, *Price 30 cents*; (d) Wood-Using Industries (Summary), *Price 35 cents*. Annual Preliminary Reports on Wood-Using Industries: (a) Planing Mills, Sash and Door Factories, *Price 20 cents*; (b) Hardwood Flooring, *Price 15 cents*; (c) Furniture, *Price 15 cents*; (d) Boxes, Baskets and Crates, *Price 15 cents*; (e) Carriages, Sleighs and Vehicle Supplies, *Price*

## PRODUCTION—continued.

## VII. MANUFACTURES—continued.

(5) *Manufactures of Forest Products—concluded.*

15 cents; (f) Coopersage, *Price 10 cents*; (g) Coffins and Caskets, *Price 10 cents*; (h) The Wooden Refrigerator Industry, *Price 10 cents*; (i) Boat Building, *Price 10 cents*; (j) Lasts, Trees and Shoe Findings, *Price 10 cents*; (k) Handles, Spools and Wood-turning, *Price 10 cents*; (l) Wooden-ware, *Price 10 cents*; (m) Excelsior, *Price 10 cents*; (n) Charcoal Manufacture, *Price 10 cents*; (o) Beekeepers' and Poultrymen's Supplies, *Price 10 cents*; (p) Miscellaneous Wood-Using Industries, *Price 10 cents*. Annual Preliminary Reports on Paper-Using Industries: (a) The Printing Trades (comprising the following industries: Printing and Publishing; Printing and Bookbinding; Lithographing; Engraving, Stereotyping and Electrotyping; Trade Composition; and Blue Printing), *Price 35 cents*; (b) Paper Boxes and Bags, *Price 25 cents*; (c) Roofing Paper, *Price 10 cents*; (d) Miscellaneous Paper Goods, *Price 10 cents*. Monthly bulletins: (a) Asphalt Roofing Production, *Price, 10 cents per copy, or 50 cents per year*; (b) Asphalt Roofing Sales, *Price, 10 cents per copy or 50 cents per year*; (c) Rigid Insulating Board, *Price, 10 cents per copy or 50 cents per year*.

NOTE.—Subscription price for all Forestry Branch publications \$5 per year.

(6) *Iron and Steel and Their Products—Biennial Report, Price 50 cents.* Annual bulletins as follows: Preliminary Summary on the Iron and Steel Industry, *Price 15 cents—*

(a) Primary Iron and Steel, *Price 25 cents*; (b) Castings and Forgings, *Price 25 cents*; (c) Heating and Cooking Apparatus, *Price 25 cents*; (d) Boilers, Tanks and Engines, *Price 25 cents*; (e) Farm Implements and Machinery, *Price 25 cents*; (f) Automobile Parts and Accessories, *Price 25 cents*; (g) Automobile Statistics for Canada, *Price 50 cents*; (h) Railway Rolling-Stock, *Price 25 cents*; (i) Wire and Wire Goods, *Price 25 cents*; (j) Sheet Metal Products, *Price 25 cents*; (k) Hardware, Tools and Cutlery, *Price 25 cents*; (l) Bridge Building and Structural Steel, *Price 25 cents*; (m) Machinery, *Price 25 cents*; (n) Bicycles, *Price 15 cents*; (o) Shipbuilding, *Price 15 cents*; (p) Aircraft, *Price 15 cents*; (q) Miscellaneous Iron and Steel Products, *Price 25 cents*; (r) Iron and Steel and Their Products (final summary), *Price 10 cents*. Commodity bulletins on the production of pig-iron, steel, washing machines, cream separators, warm air furnaces, galvanized sheets, wire nails, wire rope and cable, steel wire, wire fencing, stoves, etc. Monthly Reports: (a) Pig-Iron, Steel, and Ferro-Alloys, *Price \$1 per year*; (b) Automobile Statistics for Canada, *Price \$1 per year*; (c) Steel Ingots, *Price \$1 per year*. Quarterly Report on Galvanized Sheets, *Price \$1 per year*.

(7) *Manufactures of Non-Ferrous Metals—Biennial Report, Price 50 cents.* Annual bulletins as follows: (a) Aluminium Products, *Price 15 cents*; (b) Brass and Copper Products, *Price 25 cents*; (c) White Metal Alloys, *Price 25 cents*; (d) Jewellery and Silverware, *Price 25 cents*; (e) Electrical Apparatus and Supplies, *Price 50 cents*; (f) Miscellaneous Non-Ferrous Metal Products, *Price 15 cents*; (g) Non-Ferrous Smelting and Refining, *Price 25 cents*; (h) Manufactures of the Non-Ferrous Metals (final summary), *Price 10 cents*. Quarterly reports: Production and Sales of Radio Sets, *Price \$1 per year*; Sales of Storage Batteries, *Price \$1 per year*. Commodity bulletins on the production of batteries, silverware, vacuum cleaners, electric motors and generators, electric transformers, incandescent lamps, etc.

(8) *Manufactures of Non-Metallic Minerals—Biennial Report, Price 50 cents.* Annual bulletins as follows: Preliminary Summary on Manufactures of Non-Metallic Minerals, *Price 10 cents—*(a) The Asbestos Mining Industry and the Asbestos Products Industry, *Price 25 cents*; (b) The Cement Industry, *Price 25 cents*; (c) Coke and Gas, *Price 25 cents*; (d) Glass (blown, cut, and ornamental, etc.), *Price 15 cents*; (e) Gypsum Mining and Gypsum Products Industry, *Price 25 cents*; (f) Lime, *Price 25 cents*; (g) Petroleum Products, *Price 50 cents*; (h) Clay and Clay Products, *Price 25 cents*; (i) Salt, *Price 25 cents*; (j) Sand-Lime Brick, *Price 15 cents*; (k) Stone (primary, monumental, and ornamental), *Price 50 cents*; (l) Abrasives, *Price 15 cents*; (m) Miscellaneous Non-Metallic Mineral Products (including carbon electrodes—gypsum products—mica products—non-metallic minerals, *n.e.s.*), *Price 15 cents*. Non-Metallic Mineral Products (final summary), *Price 10 cents*. Special Report on the Consumption of Coke in Canada, *Price 25 cents*. Monthly Report on Coal and Coke Statistics, *Price \$1 per year*.

(9) *Chemicals and Allied Products—Biennial Report, Price 50 cents.* Annual bulletins as follows: Preliminary Summary on Chemicals and Allied Products, *Price 15 cents—*(a) Coal Tar Distillation, *Price 15 cents*; (b) Acids, Alkalis and Salts, *Price 15 cents*; (c) Compressed Gases, *Price 15 cents*; (d) Fertilizers, *Price 15 cents*; (e) Medicinal and Pharmaceutical Preparations, *Price 25 cents*; (f) Paints, Pigments and Varnishes, *Price 25 cents*; (g) Soaps, Washing Compounds, and Cleaning Preparations, *Price 25 cents*; (h) Toilet Preparations, *Price 25 cents*; (i) Inks, *Price 15 cents*; (j) Adhesives, *Price 15 cents*; (k) Polishes and Dressings, *Price 15 cents*; (l) Hardwood Distillation,

**PRODUCTION—concluded.****VII. MANUFACTURES—concluded.****(9) Chemicals and Allied Products—concluded.**

*Price 15 cents; (m) Miscellaneous Chemical Products (including boiler compounds—cellulose products—insecticides—sweeping compounds—disinfectants—matches—dyes and colours—chemical products, n.e.s.), Price 15 cents. Chemicals and Allied Products (final summary), Price 10 cents. Commodity bulletins on Sulphuric Acid, Ammonium Sulphate, etc. Special Reports—Fertilizer Trade in Canada, Price 25 cents; Directory of Chemical Industries in Canada as of Jan. 1, 1933, Price \$1; Consumption of Chemicals in Municipal Waterworks in Canada, 1936 and 1937, Price 25 cents.*

- (10) Miscellaneous Manufactures—General Report, Price 25 cents.** Annual Bulletins as follows: (a) Brooms, Brushes and Mops, *Price 15 cents*; (b) Musical Instruments (including pianos, organs and phonographs) and Musical Instrument Materials and Parts, *Price 15 cents*; (c) Buttons, *Price 15 cents*; (d) Bed Springs and Mattresses, *Price 15 cents*; (e) Sporting Goods, *Price 15 cents*.

**VIII. CONSTRUCTION.**

Building Permits—Monthly and Annual Record, *Price \$1 per year*. Annual Report on the Construction Industry in Canada, *Price 25 cents*. Preliminary Report on Construction, *Price 10 cents*.

**EXTERNAL TRADE (IMPORTS AND EXPORTS)—**

- (1) Annual Report of the Trade of Canada, for the calendar year 1939 (showing summary historical tables, analyses of current trends, detailed tables by items, group analyses according to component material, origin and degree of manufacture, and purpose, and comparisons of the volume of trade), *Price \$3*.
- (2) Condensed Preliminary Report of the Trade of Canada, for the calendar year 1939, *Price 25 cents*.
- (3) Monthly Report of the Trade of Canada (showing statistics of imports and exports by months and cumulative months), *Price \$2.50 per year, single copies 75 cents*.
- (4) Monthly bulletins on Trade Statistics as follows: (a) Abstract of Imports, Exports, and Duty Collected (by latest month, accrued period, and latest 12 months), *Price 75 cents per year*; (b) Summary of Canada's Imports (for latest month), *Price 75 cents per year*; (c) Summary of Canada's Exports (for latest month), *Price 75 cents per year*; (d) Canada's Imports from Principal Countries (for latest month and accrued period), *Price 75 cents per year*; (e) Canada's Domestic Exports to Principal Countries (for latest month and accrued period), *Price 75 cents per year*. The complete series in this section (4) may be obtained for \$2 per year.
- (5) Monthly Commodity Bulletins covering trade in specific Commodities for which there is need of timely statistical information. Particulars are available on application to the Dominion Bureau of Statistics.
- (6) Special Trade Reports: (a) Trade of Canada with Pacific Countries (1932); (b) Canada-Belgium Trade, 1933; (c) Canada's Imports of Commodities not produced in Canada, 1929-1933; (d) Canada-Austria Trade, 1934; (e) Canada-Germany Trade, 1934; (f) Trade of Germany (1939); (g) Trade of Scandinavia (1940).

NOTE.—Subscription price for all External Trade Branch publications \$15 per year.

**INTERNAL TRADE—**

1. RETAIL AND WHOLESALE TRADE (See Vols. X and XI under "Report of the Seventh Census," p. 1082).—

**(a) Census of Merchandising and Service Establishments, 1931.—**

*Final Reports (printed)*—Retail trade for the Dominion and the provinces, showing number of establishments, kinds of business, types of operation, full-time and part-time employees and wages, operating expenses, size of business, credit sales, forms of organization, capital invested, and sales by commodities; details for cities with populations of 30,000 and over by kinds of business, and types of operation, and by kinds of business for counties or census divisions and incorporated places with populations of 1,000 and over. Retail Trade, Canada, *Price 50 cents*; Ontario, *Price 50 cents*; Quebec, *Price 50 cents*; similar reports for each of the other provinces, *Price 25 cents each*. Reports on wholesale trade similar in form and scope to the retail series. Wholesale Trade in Canada, *Price 25 cents*; similar reports for each of the five economic divisions of the

## INTERNAL TRADE—concluded.

## 1. RETAIL AND WHOLESALE TRADE—concluded.

*Final Reports (printed)*—concluded.

- country, *Price 25 cents each*. Census of Canada, 1931, Vol. X—comprises the merchandising statistics contained in the retail series together with an analysis of results and special tables showing commodity sales; Vol. XI—comprises (1) statistics on retail services contained in the retail trade series, (2) all statistics on wholesale trade, (3) special sections dealing with retail chains, hotels, and distribution of sales of manufacturing plants, (4) analysis of results. *Price, Cloth \$1, Paper 75 cents for each volume*.
- (b) *Annual Reports (processed)*—Estimates of the total retail and wholesale trade, by provinces and by kinds of business. Retail Trade in Canada, *Price 25 cents*. Separate reports for the five economic divisions, *Price 10 cents each*. Wholesale Trade in Canada and the Provinces, *Price 10 cents*. Miscellaneous Results on Retail Trade (stocks, payroll, accounts outstanding), *Price 10 cents*. Similar report on wholesale trade, *Price 10 cents*. Retail Chains in Canada, *Price 25 cents*. Food Chains in Canada, *Price 10 cents*. Motion Picture Theatres, *Price 25 cents*. Power Laundries and Cleaning and Dyeing Establishments, *Price 25 cents*. Sales of Farm Implements and Equipment, *Price 15 cents*. Sales of Motor Vehicles and Motor Vehicle Financing (summary of monthly series), *Price 25 cents*.
- (c) *Monthly Reports*—Monthly Indexes of Wholesale Sales, Monthly Indexes of Retail Sales, Monthly Indexes of Country General Store Sales, Current Trends in Food Distribution, Monthly Financing of Motor Vehicle Sales, Monthly Sales of New Motor Vehicles. *Price \$1 per year for each publication; the two last-named (together) \$1.50 per year*.
- (d) *Special Reports*—Consumer Market Data (summary report bringing together data on population, production, wholesale and retail trade, and other factors useful to the market investigator; figures given by counties or census divisions and, wherever possible, for places of 2,000 population or more), *Price 50 cents*. Summary of Monthly Indexes of Retail Sales, 1929-39, *Price 25 cents*. Summary of Monthly Indexes of Wholesale Sales, 1935-39, *Price 10 cents*. Special reports giving analyses of operating results for the following kinds of retail business: hardware stores, food stores, drug stores, clothing and shoe stores, filling stations and garages, country general stores, *Price 15 cents each*. Motor Vehicle Retailing, 1937 (showing number of new and used vehicles sold for counties and larger centres of population), *Price 25 cents*.

## 2. PRICES STATISTICS.

*Annual Reports*—Prices and Price Indexes [including commodity wholesale and retail price index data for Canada and other countries, securities (common stocks in Canada and United States, mining stocks, preferred stocks, bond prices and yields, and foreign exchange), prices and index numbers of street car rates, hospital charges, manufactured and fuel gas, electric light rates, telephone rates, and wholesale prices of imports and exports], *Price 25 cents*. Preliminary Summary of Price Movements, 1939.

*Quarterly Report*—Index Numbers of Wholesale Prices and Cost of Living in Canada, British Empire and Foreign Countries, *Price 25 cents per year*.

*Monthly Report*—Index Numbers of Wholesale Prices and Cost of Living in Canada—Security Prices—Exchange Rates, *Price \$1 per year*.

*Weekly Reports*—Index Numbers of Wholesale Prices (including data for general wholesale prices, and industrial material prices), *Price \$1 per year*. Security Prices and Foreign Exchange, *Price \$1.50 per year, single copies 10 cents*.

*Special Report*—Index numbers of Canadian Farm Cost of Living, 1939, *Price 25 cents*.

*Subscription price for the complete series of Prices Reports, \$2.*

## 3. BALANCE OF INTERNATIONAL PAYMENTS, CAPITAL MOVEMENTS, AND INTERNATIONAL INVESTMENTS.

(a) *Annual Reports*—The Canadian Balance of International Payments, 1925-1937 (current international transactions in goods, gold, and services, and movements of capital), *Price 25 cents*. The Canadian Balance of International Payments, Revised Statement, 1938, and Preliminary Statement, 1939, *Price 15 cents*. British and Foreign Capital Invested in Canada and Canadian Capital Invested Abroad, 1926-1935, *Price 25 cents*. British and Foreign Direct Investments in Canada and Canadian Direct Investments Abroad, 1937, *Price 50 cents*.

(b) *Monthly Report*—Sales and Purchases of Securities Between Canada and Other Countries, *Price \$1 per year, single copies 10 cents*.

(c) *Special Report*—The Canadian Balance of International Payments—A Study of Methods and Results (printed), *Price \$1*.

## TRANSPORTATION, COMMUNICATIONS, AND PUBLIC UTILITIES—

- (1) *Railways and Tramways*.—Annual Reports: (a) Railway Statistics, *Price 50 cents*; (b) Electric Railway Statistics, *Price 25 cents*; (c) Location of Railway Mileages, *Price 10 cents*; (d) Summary of Monthly Railway Traffic Reports, *Price 25 cents*; (e) Canadian National Railways, 1923-1938, *Price 20 cents*; (f) Canadian Pacific Railway, 1923-1938, *Price 20 cents*. Monthly Reports: (a) Railway Revenues, Expenses, Incomes, and Operating Statistics, *Price 50 cents*; (b) Freight Traffic of Railways, *Price 50 cents*. Weekly Report: Car Loadings of Revenue Freight, *Price \$1.50 per year*. Special Report: Index Numbers of Railway Freight Rates, *Price 25 cents*. Subscription price for all railway reports, \$3 per year.
- (2) *Express*.—Annual Report on Express Statistics, *Price 25 cents*.
- (3) *Telegraphs*.—Annual Report on Telegraph Statistics, *Price 25 cents*.
- (4) *Telephones*.—Annual Report on Telephone Statistics, *Price 25 cents*.
- (5) *Water Transportation*.—(a) Annual Report on Canal Statistics, *Price 25 cents*; (b) Monthly Report on Canal Statistics, *Price 50 cents*.
- (6) *Shipping*.—Annual Report of Arrivals and Departures of Vessels for Canadian Ports, *Price 25 cents*.
- (7) *Electric Stations*.—(a) Annual Report on Central Electric Stations in Canada, *Price 25 cents*; (b) Report on Index Numbers of Electric Light Rates, *Price 25 cents*; (c) Report on use of Electric Energy in Industries, *Price 25 cents*; (d) Monthly Report on Electric Energy Generated, *Price 50 cents*. Subscription price for all central electric station reports, \$1 per year.
- (8) *Motor Vehicles*.—(a) Annual Report on Motor Vehicle Registrations, *Price 10 cents*; (b) Annual Report on Highway Mileage Open for Traffic, Construction, and Expenditures on Construction and Maintenance, *Price 25 cents*.
- (9) *Civil Aviation*.—Quarterly Report—Operating Statistics (starting 1940), *Price 10 cents*. Annual Report, *Price 25 cents*.

NOTE.—Subscription price for all Transportation, Communications, and Public Utilities Branch publications, \$5 per year.

## FINANCE—

THE PUBLIC DEBT OF CANADA, DOMINION, PROVINCIAL, AND MUNICIPAL, 1934, 1936, 1937 and 1938 (1935 out of print), *Price 25 cents*.

## PROVINCIAL PUBLIC FINANCE.

- (1) *Financial Statistics of Provincial Governments*.—(a) 1921 to 1937, including special summaries and analyses (1923, 1924, and 1927-31 out of print), *Price 25 cents*; (b) Bonded Indebtedness of Provinces—special analysis, 1916 to 1930 (out of print).

## MUNICIPAL FINANCE.

- (1) *Statistics of Cities and Towns*.—(a) Urban Municipalities Having a Population of 10,000 and Over, 1919 and 1920; (b) 1925 to 1937 (1925 and 1928 out of print), *Price 25 cents*; (c) Urban Municipalities Having Populations of 3,000 to 10,000, 1919; (d) Urban Municipalities Having Populations of 1,000 to 3,000, 1920; (e) Urban Municipalities Having Populations of 5,000 and Over, and 1,000 to 5,000, 1922.
- (2) *Assessment Valuations; Analysis by Classes of Municipalities*.—(a) 1919 to 1923; (b) 1924 to 1937, *Price 25 cents*.
- (3) *Bonded Indebtedness by Classes of Urban and Rural Municipalities*.—(a) 1919 to 1937 (1919-23 out of print), *Price 25 cents*.
- (4) *Municipal Tax Levies and Receipts*.—Historical Analysis, 1913-37, *Price 25 cents*.

## CIVIL SERVICE STATISTICS OF THE DOMINION GOVERNMENT.

- (a) Numbers of Personnel and Salary Expenditure for the Month of January, 1912-1924 (Special Report—out of print); (b) Numbers of Personnel and Salary Expenditures by Months, *Price 25 cents*—(1) 1925-31; (2) 1932-34; (3) 1935-36; (4) 1937-39.

## JUSTICE—

*Criminal Statistics*.—Annual Report (Covering convictions, sentences, prison statistics, police statistics, pardons, appeals, commutations, and executions), *Price 50 cents*.

## EDUCATION—

*Survey of Education in Canada* (1921-36), includes a bibliography of Canadian studies in education and a directory of Dominion and provincial associations in the field of education (since 1932) and an index of Canadian education periodicals (since 1934), *Price 50 cents*.

**EDUCATION**—concluded.

*Biennial Survey of Education in Canada, 1936-38*, published as three separate volumes, viz.: (1) *Elementary and Secondary Education in Canada, 1936-38*, includes a directory, bibliography, and index of periodicals, 115 pp., *Price 50 cents*. (2) *Higher Education in Canada, 1936-38*, includes enrolment, graduates and staff for the years since 1921, scholarships in Canadian universities, supply and demand in the professions in Canada, bibliography on higher education in Canada, 98 pp., *Price 35 cents*. The Storage of Oysters—A. W. H. Needler. Check List of the Fishes of the Dominion of Canada and Newfoundland, illustrated (§2)—A. Halkett. \*100 Tempting Fish Recipes (fish cooking hints and recipes). \*Memoranda (mimeographed) dealing with some methods of fish processing. \*Memorandum descriptive of some fish hatchery methods. Report on Markets for Dried and Pickled Fish—O. F. MacKenzie and F. Homer Zwicker.

NOTE.—Publications of the Department of Fisheries are distributed at the discretion of the Department and applicants for any papers should indicate the purposes for which they are desired. In some cases charges may be made.

**Insurance.**—Quarterly Statement showing List of Registered Insurance Companies. Annual Abstract of Statements of Registered Insurance Companies (subject to correction). Annual Reports of the Insurance Department, Vol. I (Fire and Miscellaneous), Vol. II (Life Companies and Fraternal Benefit Societies). Annual List of Securities held by Insurance, Trust and Loan Companies, with Department's Valuation thereof. Annual Abstract of Statements of Loan, Small Loan and Trust Companies (subject to correction). Annual Report of Loan and Trust Companies. Annual Report of Small Loan Companies. Classification of Fire Insurance Risks. Table of Bond Values. Statistical Report of Fire Losses in Canada.

**Justice.**—Annual Report of the Superintendent of Penitentiaries. Canadian Constitutional Decisions of the Judicial Committee, Price \$5.

**King's Printer and Controller of Stationery.**—The Canada Gazette (published weekly, with occasional supplements and extras), Price, in Canada and United States, \$8 per annum payable in advance, single copies 20 cents each; other countries \$10 per annum and 25 cents per single copy. Judgments of the Board of Transport Commissioners, semi-monthly

\$3 per annum, single copies, 20 cents. Canada Law Reports, published monthly, Price \$6 per annum. Revised Statutes of Canada, 1927 (5 vols.), \$10. Annual Statutes, 1928-39, \$5 each. Acts, Public and Private, with Amendments to date, 10 cents to \$1 per copy. Canadian Postal Guide, \$1, including supplements additional 25 cents. Parliamentary Debates, "Hansard", issued daily during session (French and English), \$3 per session each series for House of Commons and Senate Debates; single copies, 5 cents.

NOTE.—Prices of bluebooks are in nearly every case printed upon the front cover and are based practically on cost. They may be ordered direct from the King's Printer, Ottawa. A catalogue of official publications of the Parliament and Government of Canada is issued regularly once a year with supplements when required and copies may be obtained from the King's Printer, Ottawa.

**Labour.**—*Monthly.*—The Labour Gazette (published in English and French), *Subscription price 20 cents per annum, postage prepaid, to subscribers in Canada, the United States of America, and Mexico, and \$1 per annum, postage prepaid, to subscribers in all other countries.* *Annual.*—Report of the Department of Labour (separate reprints are issued of the chapters dealing with the administration of the following statutes: Industrial Disputes Investigation Act; Government Annuities Act; Employment Offices Co-ordination Act; Technical Education Act; Combines Investigation Act; Unemployment and Agricultural Assistance Act; Youth Training Act). Report on Wages and Hours of Labour in Canada. Report on Prices in Canada and Other Countries. Report on Strikes and Lockouts in Canada and Other Countries. Report on Labour Organization in Canada. Report on Labour Legislation in Canada (from time to time there are issued consolidated reports, the most recent of which reproduces the text or a summary of all Dominion and provincial labour legislation in existence at Dec. 31, 1937). *General Reports.*—Report on Industry, Commerce, and the Professions in Canada (the most recent issue is for the year 1937). Report of Judicial Proceedings Respecting Constitutional Validity of the Industrial Disputes Investigation Act, 1907, and Amendments of 1910, 1918, and 1920. The Employment of Children and Young Persons in Canada. Trade Union Law in Canada. Final Report of the National Employment Commission. Training Canada's Young Unemployed. *Reports of Investigations under the Combines Investigation Act.*—(1) Report of Commissioner on Alleged Combine in the Distribution of Fruit and Vegetables in Western Canada, 1925; (2) Report of Registrar on Alleged Combine Limiting Competition in the Marketing of New Brunswick Potatoes, 1925; (3) Report of Registrar on Alleged Combine in the Manufacture and Sale of Bread in the City of Montreal, 1926; (4) Report of Commissioner on Alleged Combine in the Distribution of Fruits and Vegetables Produced in Ontario, 1926; (5) Interim Report of Registrar on the Proprietary Articles Trade Association, an Alleged Combine of Wholesale and Retail Druggists and Manufacturers, Established to Fix and Maintain Resale Prices of Proprietary Medicines and Toilet Articles, 1926; (6) Report of Commissioner on the Proprietary Articles Trade Association, 1927; (7) Report of Commissioner on the Amalgamated Builders' Council and Related Organizations, an Alleged Combine of Plumbing and Heating Contractors and Others in Ontario, 1929; (8) Report of Commissioner on the Electrical Estimators' Association, an Alleged Combine of Electrical Contractors in the City of Toronto, 1930; (9) Report of Registrar on Alleged Combine in the Bread-baking Industry in Canada, 1931; (10) Report of Commissioner on Alleged Combine in the Motion Picture Industry in Canada, 1931; (11) Report of Registrar on Alleged Combine of Tobacco Manufacturers and Other Buyers of Raw Leaf Tobacco in Ontario, 1933; (12) Report of Registrar on Alleged Combine in the Importation and Distribution of British Anthracite Coal in Canada, 1933; (13) Report of Commissioner under the Inquiries Act on Anthracite Coal, 1937; (14) Report of Commissioner on Alleged Combine in the Distribution of Tobacco Products in Alberta and Elsewhere in Canada, 1938; (15) Report of Commissioner on Alleged Combine in the Manufacture and Sale of Paperboard Shipping Containers and Related Products, 1939; (16) Report of Commissioner on Alleged Combine of Wholesalers and Shippers of Fruits and Vegetables in Western Canada, 1939. *Bulletins in Industrial Relations Series.*—(1) Joint Councils in Industry; (2) Report of a Conference on Industrial Relations Held at Ottawa in 1921; (3) Report of Joint Conference of the Building and Construction Industries in Canada, 1921; (5) Canada and the International Labour Conference; (7) Canadian Railway Board of Adjustment No. 1, Second Report; (8) Report of National Conference Regarding Winter Employment in Canada, 1924; (9) Canadian Railway Board of Adjustment No. 1, Third Report; (10) Canadian Railway Board of Adjustment No. 1, Fourth Report; (11) Government Intervention in Labour Disputes in Canada; (12) Canadian Railway Board of Adjustment No. 1, Fifth Report; (13) Canadian Railway Board of Adjustment No. 1, Sixth Report; (14) Canadian Railway Board of Adjustment No. 1, Seventh Report.

### Mines and Resources.—

NOTE.—The Department of Mines and Resources has published a large number of reports and maps dealing with the natural resources of Canada and applications for publications, other than the Annual Report of the Department, should be addressed to the Director of the Branches concerned. Hereunder are listed the more important publications of the year 1939. Catalogues listing the complete series of reports will be furnished upon request.

DEPARTMENTAL.—Annual Report of the Department of Mines and Resources for fiscal years.

**MINES AND GEOLOGY BRANCH.**—Annual Report Separate Mines and Geology Branch. *Bureau of Geology and Topography.*—Memoir 215: Fossil Flora of Sydney Coal Field, by W. A. Bell; Memoir 210: Rice Lake-Gold Lake Area, Southeastern Manitoba, by C. H. Stockwell; Memoir 217: Laberge Map-area, Yukon, by H. S. Bostock and E. J. Lees; Memoir 218: Mining Industry of Yukon, 1937, by H. S. Bostock. *National Museum of Canada.*—Bulletin 90: The Sarcee Indians of Alberta, by D. Jenness; Bulletin 91: Annual Report of the National Museum for the Fiscal Year 1937-38. *Bureau of Mines.*—Limestones of Canada, P. IV, Ont., by M. F. Goudge; Comparative Pulverized Fuel, by C. E. Baltzer and E. S. Malloch; Canadian Mineral Industry, 1937; Improving Properties of Clays and Shales. *Explosives Division.*—The Storage of Explosives; Report for the Calendar Year 1938.

**LANDS, PARKS AND FORESTS BRANCH.**—Annual Report Separate Lands, Parks and Forests Branch. *Bureau of Northwest Territories and Yukon Affairs.*—Game Ordinance and Fur Export Tax Ordinance; Canada's Reindeer Experiment. *National Parks Bureau.*—Jasper National Park—General Information Folder; Riding Mountain National Park; Guide to Fort Chambly; Kootenay, Yoho, Glacier, Mt. Revelstoke—General Information Folder; Banff National Park—General Information Folder; National Parks of Canada; Historic Sites of Canada (French); Catalogue of Motion Picture Films; Waterton Lakes National Park. *Forest Service.*—(No. 2) White Spruce; (No. 53) Brown Stain in Sugar Maple; (No. 91) Forests of New Brunswick; (No. 92) Economic Aspects of the Forests and Forest Industries of Canada; (No. 54) The Strength of Eastern Canadian Spruce Timbers in Sizes Shipped to the United Kingdom; (No. 56) The Preservative Treatment of Fence-Posts; (No. 95) The Penetration into Wood of Cooking Liquors and other Media; Forestry Lessons; Canada's Forests.

**SURVEYS AND ENGINEERING BRANCH.**—Annual Report Separate Surveys and Engineering Branch. *Dominion Observatories.*—Saturday Evening Program—July, August, September; Vol. XII, No. 18—Bibliography of Seismology, *Price 25 cents*; Vol. VII, No. 6—The Calculation of Rotating Factors for Eclipsing Binaries, *Price 40 cents*; Vol. XII, No. 19—Bibliography of Seismology, *Price 25 cents*; Vol. VII, No. 3—The Definitive Orbit of the Spectrographic Binary Beta Arietis, *Price 25 cents*; Vol. VII, No. 4—The Spectroscopic Orbit of H. D. 195986, *Price 60 cents*; Vol. VII, No. 5—One Hundred and Thirty-two New Variable Stars in Five Globular Clusters, *Price 50 cents*; Saturday Evening Program—October, November, December; Vol. XI, No. 4—Gravity Determinations in 1936, *Price 25 cents*; Vol. VII, No. 7—The Spectrographic Orbit of Boss 3511; Saturday Evening Program—January, February, March; Vol. XII, No. 20—Bibliography of Seismology, *Price 25 cents*; Saturday Evening Program—April, May, June. *Hydrographic and Map Service.*—Tide Tables for: Atlantic Coast, *Price 25 cents*; Prince Rupert; Halifax and Sydney; Saint John; Quebec and Father Point; Charlottetown; Vancouver and Sand Heads, *Price 10 cents each*; Pacific Coast, *Price 25 cents*; British Columbia Pilot, *Price \$1*; Catalogue of Maps and Publications; Supplement No. 2—(St. Lawrence River Pilot). *Water and Power Bureau.*—Water Resources Paper No. 78—Pacific Drainage, 1932-33 and 1933-34. *Geodetic Service.*—No. 59—The Transfer of Geodetic Data from One Ellipsoid to Another, *Price \$1.50*; Reports of International Association No. 75.

**National Defence.**—Annual Report; List of Officers, Defence Forces of Canada, Naval, Military, and Air Services; Canadian Navy List; Naval General Orders; General Orders, Militia; Militia Orders; Air Regulations; Air Force General Orders.

**National Research Council.**—A list of 773 publications issued by the National Research Council, 1918-38, is available for free distribution on request. Supplements to this list give the total number of publications issued to May, 1940 as 915. This list includes Annual Reports of the Council; Technical Reports Nos. 1-18; Bulletins Nos. 1-19; Mimeographed Reports not hitherto listed as Council publications; Papers reprinted from the Canadian Journal of Research which contain (i) Reports of experimental work carried on in the National Research Laboratories, (ii) Reports of work done elsewhere with financial assistance from the National Research Council. All of these reports have been arranged in chronological order of publication and numbered in sequence. This new series of publications is preceded by the letters "N.R.C. No.".

The Canadian Journal of Research has not been included in the N.R.C. No. series. Established as a medium for the publication in Canada of the results of original scientific research carried on in the Dominion, the Canadian Journal of Research is now published in four sections: A—Physical Sciences; B—Chemical Sciences; C—Botanical Sciences; D—Zoological Sciences. The Journal has a wide circulation and is to be found in the leading scientific libraries of the world. From its inception in May, 1929, to the end of Volume 12 in June, 1935, the Journal was issued in a single volume each month. *Copies of these 12 volumes unbound are available at \$1.50 each. An index of volumes 1-12 is available at \$1.* From July, 1935, the Journal has been published in four sections as noted above. Each section is pagged separately. Sections A and B are bound in one cover each month and Sections C and D are likewise bound together. The issues from July to December, 1935, were included in Volume 13 (*Price \$2*). Volume 14 contains the Journals issued in 1936 and one volume has been published each year since then. *Single numbers of the Journal are priced at 50 cents each; the yearly subscription for Sections A and B is \$2.50; Sections C and D, \$2.50; the four Sections complete \$4.*

Additional information regarding Council publications and reports of Council activities may be obtained from the Officer-in-Charge, Research Plans and Publications Section, National Research Council, Ottawa, Canada.

**National Revenue.**—Annual Report, containing statements relative to Imports, Exports, Excise, and Income. National Revenue Review (monthly).

**Pensions and National Health.**—(1) Sanitation—Sewage Treatment for Isolated Houses and Small Institutions where Municipal Sewage System is not available; (2) The Canadian Mother's Book; (3) Infantile Paralysis; (17) Wells; (18) Home Treatment, Rural Water Supplies; (19) Athletes' Foot; (21) Housing; (22) A Survey of Vitamins; (23) Air Conditioning and Heating in Relation to Health; (24) Information for Men—Syphilis and Gonorrhœa; (25) Information for Young Women about Sex Hygiene; (26) Information for Parents—Teaching Sexual Hygiene to Children; (27) Prevention of Blindness in Babies; (29a) Goitre—Facts for the General Public; (30) How to Build Sound Teeth; (31) What You Should Know about Tuberculosis; (32) Smallpox and Vaccination; (34) The Rat Menace; (35) Middle Age—Your Arteries and Heart; (36) The Common Cold; (100) Hay Fever and Asthma; (101) Artificial Respiration (Poster); (102) Holiday Health—A Guide for Campers and Cottagers; (103) Typhoid Fever; (104) Health Axioms; (105) Sleep; (107) Posture; (108) Prevention of Diphtheria.

**Post Office.**—Annual Report of the Postmaster General. Official Postal Guide. Regulations as to Rural Mail Delivery. Booklet of Postal Information.

**Public Archives.**—*Annual Reports.*—1914-15 (60 cents); 1921 (30 cents); 1923 (55 cents); 1926 (10 cents); 1928 (25 cents); 1929 (50 cents); 1930 (50 cents); 1931 (\$1); 1932 (\$1); 1933 (\$1); 1934 (10 cents); 1935 (\$1); 1936 (\$1); 1937 (\$1); 1938 (\$1); 1939 (50 cents).

*Numbered Publications.*—No. 9, Early Canadian Northwest Legislation—Oliver (2 Vols.) (1914-15), \$2; No. 12, Reports on the Laws of Quebec, 1767-70—Kennedy and Lanctot (1931), \$1; No. 13, Vol. I, Catalogue of Pamphlets,<sup>1</sup> 1493-1877—Casey (1931), \$1; Vol. II, Catalogue of Pamphlets,<sup>2</sup> 1878-1931—Casey (1932), \$1.

*Special Publications.*—(h) Documents—Constitutional History of Canada, 1759-91—Shortt and Doughty, 2 ed. (2 Vols.), (1918), \$2; (i) Catalogue of Pictures, etc.,<sup>3</sup> Part I, Sect. 1—Kenney (1925), \$2.50; (j) Documents—Canadian Currency, Exchange, etc., during the French Period—Shortt (2 Vols.), (1925-26), \$3; (l) The Kelsey Papers<sup>4</sup> (Hudson Bay Co. Journals, 1683-1722)—Doughty and Martin (1929), \$2; (m) Documents—Currency in Nova Scotia,<sup>5</sup> 1675-1758—Shortt, Johnston, Lanctot (1933), \$2; (n) Documents—Constitutional History of Canada, 1819-28—Doughty and Story (1935), \$2; (o) The Elgin-Grey Papers,<sup>7</sup> 1846-52—Doughty (4 Vols.) (1937), \$5.

<sup>1</sup> Contain texts, calendars, and catalogues of documents as well as reports on the administrative work of the Divisions. <sup>2</sup> Title page and introduction in English and French, same volume; titles of pamphlets as in original; index in English.

<sup>3</sup> Title, preface, and introduction in English and French in same volume; notes in English; titles of pictures exact. <sup>4</sup> Complete volumes, including index in English and French in same volume.

<sup>5</sup> Title and introduction in English and French in same volume; notes and index in English; texts of journals exactly as in original (English). <sup>6</sup> Title and foreword in English and French, otherwise in English.

<sup>7</sup> Title and introduction in English and French, otherwise in English.

**Public Works.**—Annual Report.

**Secretary of State.**—Annual Report. The Arms of Canada. The Canadian Patent Office Record, *Annual subscription* \$10, *single numbers* 10 cents. Annual Report of the Commissioner of Patents, *Price* 10 cents.

**Trade and Commerce.**—Annual Report of the Department of Trade and Commerce, *Price* 25 cents; Annual Report of the Board of Grain Commissioners for Canada, *Price* 25 cents; Annual Report of Electricity and Gas, *Price* 25 cents; Annual Report of Dominion Grain Research Laboratory, *Price* 10 cents; List of Licensed Elevators, etc., *Price* 50 cents; Motion Pictures (catalogue of), *Free*.

NOTE.—Requests for the above publications (except for the last-named which should be addressed to the Canadian Government Motion Picture Bureau), should be addressed to the King's Printer.

**Commercial Intelligence Service.**—Commercial Intelligence Journal, published weekly in English and French, containing reports of Trade Commissioners and other commercial information, *Annual subscription, Canada, \$1, outside Canada, \$3.50*.

NOTE.—Publications of the Commercial Intelligence Service are compiled with a view to furnishing Canadian exporters with information respecting the possibilities for the sale of Canadian goods abroad, the nature of the competition to be encountered, Customs requirements, etc., and are not intended for general distribution. The publications available include leaflets giving Invoice Requirements and a series on Points for Exporters, both covering countries included in the territories assigned to Trade Commissioners. From time to time special reports are issued separately, which subscribers to the Commercial Intelligence Journal are entitled to receive free of charge. In all other cases their distribution is controlled by the King's Printer, who fixes a price therefor.

## CHAPTER XXX.—THE ANNUAL REGISTER.

### Section 1.—Dominion Legislation, 1939.

Legislation of the Fourth Session of the Eighteenth Parliament, Jan. 12, 1939, to June 3, 1939.

**Finance and Taxation.**—Three Appropriation Acts, applying to the fiscal year ended Mar. 31, 1940, were passed during the session, viz., cc. 1, 27, and 53. C. 1, the Appropriation Act, No. 1, 1939, granted: a sum not exceeding \$45,095,590·78 towards defraying the several charges and expenses of the public service, being one-sixth of the amount of each of the several items to be voted set forth in the Main Estimates; \$567,471·83, being one-third of the amount set forth in Schedule A to this Act; \$212,500, being one-half of the amount of each of the several items to be voted set forth in Schedule B; \$20,389,783, being one-sixth of the amount set forth in the Special Supplementary Estimates. C. 27, the Appropriation Act, No. 2, granted: a sum not exceeding \$45,095,590·78 towards defraying the several charges and expenses of the public service, being one-sixth of the amount of each of the several items to be voted set forth in the Main Estimates; \$20,389,783, being one-sixth of the amount set forth in the Special Supplementary Estimates; \$24,308,853·91, set forth in the Schedule to this Act, to be chargeable to the fiscal year ended Mar. 31, 1939 (with provision that it may be paid any time before May 22, 1939). C. 53 granted: a sum not exceeding \$179,602,391·32 towards defraying the several charges and expenses of the public service, being the amount of each of the items set forth in Schedule A to this Act less amounts voted on account for said items in Appropriation Acts Nos. 1 and 2, 1939; \$81,559,131·99, being the amount of each of the items set forth in Schedule B to this Act less amounts voted on account for said items in Appropriation Acts Nos. 1 and 2, 1939; \$9,559,604·89, being the amount set forth in Schedule C to this Act. Under Sect. 5 of this chapter, the Governor in Council is empowered to raise a loan not in excess of \$200,000,000 for public works and general purposes, the principal and interest being chargeable to the Consolidated Revenue Fund. All borrowing powers authorized by Appropriation Act No. 3, 1938 (c. 54, 1938) expire on the coming into force of this legislation.

C. 40 is the Central Mortgage Bank Act and provides that on a date to be fixed by proclamation there should be established under the Minister of Finance, a body politic and corporate having capacity to contract, to sue, and to be sued. This Central Bank may enter into Membership Agreements with mortgage, loan, trust, or insurance companies for the purpose of adjusting all mortgages on farms in Canada that were entered into before the first day of January, 1939, and those on non-farm homes entered into before Jan. 1, 1936, that do not exceed \$7,000 for single-family homes and \$12,000 for two-family homes. Mortgages made under the Dominion Housing Act, 1935, or Part I of the National Housing Act, 1938, are excepted. Particulars as to the adjustments that are to be made in regard to principal, interest, amortization, etc., are detailed in Sect. 16. The constitution and organization of the Bank, including the appointment of directors, executive committee, bank staff, and capital are laid down, as well as the method of making appraisals, the issuance of debentures to member companies in respect of amounts written off, adjusted mortgages, and other relative matters. (The Act was proclaimed in effect from July 14, 1939.)

C. 45 is the Gold Clauses Act, 1939. By this statute the Gold Clauses Act, 1937 (c. 33, 1937), is repealed, though its main intent is re-affirmed in the new legislation. It provides that obligations that give the creditor a right to require payment in gold or gold coin are contrary to public policy, and such provisions shall be interpreted as if it contained a covenant to pay its nominal or face amount in currency that is legal tender in the country in the money of which the obligation is payable, or its equivalent in Canadian currency. The Act specifically applies its provisions to obligations incurred in connection with works and undertakings that are subject to the legislative authority of the Parliament of Canada. Any payment in respect of a gold-clause obligation made before the commencement of this Act, but which meets with the requirements laid down in this legislation, shall be deemed to have discharged the obligation.

By c. 48, the Loan Act, 1939, the Governor in Council may raise, by the issue and sale or pledge of securities of Canada, such sums as may be required, not to exceed \$750,000,000, for paying or redeeming loans or obligations of Canada and for purchasing or withdrawing from circulation unmatured securities of Canada, and for public works and general purposes. Principal and interest shall be a charge upon and payable out of the Consolidated Revenue Fund.

*National Revenue.*—Schedules A and B to the Customs Tariff (c. 44, 1927, and amendments) are amended by c. 41 by striking out certain items enumerated in Sects. 1 and 2 and substituting Schedules A and B of this Act. This Act applies to all goods mentioned in the schedules imported or taken out of warehouse for consumption on or after Apr. 26, 1939, and to goods previously imported for which no entry for consumption was made before that date.

C. 43 amends the Excise Act (c. 52, 1934, and amendments). The excise duty on spirits used in the production of vinegar is raised from twenty-seven cents to sixty cents per gallon from Apr. 26, 1939.

The Income War Tax Act (c. 97, R.S.C. 1927, and amendments) is further amended in a number of respects by c. 46. The definition of "taxpayer" is changed to include any person, even though such person be not liable to pay tax, and the definition of what constitutes "personal and living expenses" is given. Dividends paid to a company incorporated in Canada by a company that has never paid a tax by reason of Sects. 89 and 90 are exempt from taxation (Sect. 89 deals with metalliferous mines; Sect. 90 with capital expenditure allowance). The exemption of \$1,000, which applies to all persons *not* covered by other classes set out in Sect. 5, no longer applies in the case of associations, estates, and trusts. Associations, estates, and trusts are thus placed on the same footing as corporations in this respect. In computing profits or gains to be assessed on Canadian companies, deduction is not permitted for salary, bonus, director's fee, or other like remuneration in excess of \$14,000 paid by a Canadian company to a non-resident unless such non-resident pays tax thereon. Expenses incurred by a corporation to earn non-taxable income shall not be deducted and the Minister shall have power to apportion general expenses between taxable and non-taxable income.

Deduction of the amount of tax paid to the United Kingdom or a foreign country in respect of income derived from sources therein shall not exceed the same proportion of the tax otherwise payable under this Act as that which the taxpayer's net income from such country bears to his net income from all sources, without taking into account certain exemptions provided by this Act.

When the total income earned by a personal corporation since its incorporation has been taxed against and received by its shareholders, further dividends declared and paid out of capital are not liable to taxation in the hands of the shareholders. Where unreasonable price, rental, royalty, or other payments are made to non-resident affiliations for use of any property or for any right, such payments may be adjusted, for purposes of the income tax, by the Minister. Transfer by a person to any *relative* of his of the right to income without transferring ownership of the property producing such income does not exempt the transferor from taxation on the said income as if the transfer had not been made. Under Part IV—Capital Expenditure Allowance—it is provided that a taxpayer shall be entitled to deduct (in a manner provided by this Act) from taxes otherwise payable under the Act an amount up to 10 p.c. of his capital costs, incurred and paid between May 1, 1939, and Apr. 30, 1940. Certain enumerated capital costs are definitely excluded under s-s. 4 of Sect. 90. The determination of such capital costs shall be included shall rest with the Minister. Other minor provisions, such as regulations, penalties, etc., are laid down. Sect. 18 fixes the dates of coming into force of various sections of the chapter.

C. 52 amends the Special War Revenue Act (c. 179, 1927) in relation to the numbers of matches contained in packages on which taxes of three-eighths of one cent and three-sixteenths of one cent per package are charged. The tax of 3 p.c. on duty-paid value of goods imported into Canada payable by the importer or transferee who takes the goods out of bond for consumption is confined to goods subject to entry under the General Tariff. Under Schedules III and V of the Act, changes have been made in a number of items, particularly: certain classes of books and printed matter, nicotine, agricultural machinery, surgical instruments, and scientific instruments.

**Agriculture.**—By c. 7, the Prairie Farm Rehabilitation Act (c. 23, 1935) is extended to permit the Minister to enter into agreements with any of the Provinces of Manitoba, Saskatchewan, or Alberta, or any city or other municipality within the said Provinces or with any person, firm, or corporation, with respect to the development, promotion, construction, operation, and maintenance of any project undertaken under the Act or that may be deemed necessary or desirable for the conservation of water. The Minister is also given authority, subject to the approval of the Governor in Council in certain cases, to purchase, lease, or otherwise acquire, and to sell, lease, or otherwise dispose of lands, premises, machinery, only, or equipment in connection with any such project.

C. 13 is the Cheese and Cheese Factory Improvement Act, and provides, subject to the regulations laid down, for the payment of grants up to 50 p.c. of the amount actually expended for constructing, reconstructing, equipping, or enlarging cheese factories eligible for a subsidy under this Act. The Act also provides for the payment of a premium of one and two cents per pound on highest quality cheese.

The appointment of an Advisory Committee to consider conditions and problems affecting the dairy industry and to advise the Minister and the industry in that connection is provided for by c. 15.

By c. 21 the title of the Act to regulate the sale and inspection of agricultural economic poisons (c. 5, R.S.C. 1927) is revised to read "An Act to Regulate the Sale of Products used in Controlling Agricultural Pests" and the Act itself is broadened accordingly. The statement of information to accompany an application for

registration of a pest control product is amended and the fee for renewal of registration number is reduced from \$20 to \$5. Any pest control product manufactured from an unsolicited prescription countersigned by an inspector and submitted by the purchaser, or prepared by a retail druggist from an unsolicited prescription submitted by the purchaser, and not purchased for resale in Canada, is excepted from the provisions of this Act. Any pest control product advertised, offered, or held in possession for sale, or sold in Canada contrary to the provisions of this Act or regulations may be seized. Other minor amendments are also made.

For the purpose of assisting and encouraging co-operative marketing of agricultural products, it is provided by c. 28 that, should the average sale price received under a co-operative plan by a selling agency for such agricultural products as are defined under this Act be less than the sum paid to the producer at the time of delivery pursuant to a co-operative plan—that sum being a percentage not over 80 p.c. (approved by the Governor in Council on the recommendation of the Minister) of the average wholesale price for such products over the preceding three years—the difference as fixed by an agreement previously made between the selling agency and the Minister, with the approval of the Governor in Council, shall be paid by the Minister of Agriculture to the selling agency. No agreement is to be made under this Act unless the Minister is of opinion that the marketing of an agricultural product under the co-operative plan will benefit the primary producer in the geographical area concerned. Regulations under the Act are made by the Minister of Agriculture, with the approval of the Governor in Council. Provision is made for the inspection and auditing of the books and accounts of every co-operative association and selling agency to whom an agreement relates. (The Act was proclaimed in effect from July 1, 1939.)

C. 31, the Grain Futures Act, 1939, vests in the Board of Grain Commissioners, the supervision and regulation of trading in grain futures. The Board is authorized to make regulations concerning the co-operation of members of the Winnipeg Grain Exchange and the Winnipeg Grain and Produce Exchange Clearing Association Limited, and to take such steps, laid down in the Act, as are necessary to prevent any condition prejudicial to the public interest arising from speculation or from transactions in grain futures. The Board shall have jurisdiction to hear appeals from a committee of the Winnipeg Grain Exchange in connection with disputes regarding grain futures contracts. An appeal from the Board may be made to the Minister of Trade and Commerce. Penalties for breaches of the provisions of this Act are laid down.

It is provided by c. 34, for the purpose of encouraging the co-operative marketing of wheat, that the Minister of Agriculture may, with the approval of the Governor in Council, by agreement with any selling agency, undertake that if the average sale price of all wheat of any grade is less than the sum per bushel fixed by the agreement (in the case of No. 1 Manitoba Northern, in store at Fort William, such sum is to be sixty cents), there shall be paid to the selling agency by the Minister of Agriculture the amount, if any, by which the amount (called the initial payment) paid to the primary producer at the time of delivery plus storage, carrying and transportation charges, and operating expenses exceeds the average sale price. It is provided, however, that the initial payment shall not, in the case of wheat of any grade, exceed the sum guaranteed per bushel aforesaid, and that the maximum that may be paid shall not exceed the difference between the average sale price and the sum guaranteed per bushel fixed by the agreement for such grade of wheat. The average

sale price shall be computed after the sale prices realized by the selling agency have been adjusted according to the regulations, as if the wheat had been sold in store at Fort William. All regulations concerning this Act are to be made by the Governor in Council, who may also appoint such officers and employees as may be deemed necessary for its administration. The books and accounts of each selling agency and co-operative association are subject to inspection and audit by an approved chartered accountant. (The Act was proclaimed in effect from July 3, 1939.)

The Grain Act (c. 5, 1930) is amended by c. 36. Officers under the control of the Board of Grain Commissioners are no longer required to be bonded and any loss suffered through failure in performance of duty shall be paid out of the Government Officers' Guarantee Fund. Other amendments are made with respect to the duties and powers of the Board and in respect to: the grading and sampling of grain; grain appeal tribunals; carriage of grain, by which no railway shall deliver wheat to any country elevator except on permission of the Board; licences, including an amendment by which the Board has power to grant only one kind of elevator licence to any elevator; also a manager of a licensed elevator shall have a lien on grain in his possession for handling, storage, or carriage charges properly incurred under the Act and such grain may be sold by auction or public tender to cover such charges if in arrears for more than one year. Other amendments are made in respect to the functions of and restrictions on various classes of elevators. Schedules 1, 2, and 3 of the Act are repealed and new schedules substituted therefor.

Under an amendment (c. 39) to the Canadian Wheat Board Act, 1935 (c. 53, 1935), a proviso is added to the stipulation that the Board may buy wheat from producers only, to the effect that the Board may purchase from any one person entitled as landlord, vendor, mortgagee, or otherwise, by contract or operation of law, wheat to which such person is entitled grown by another producer, the aggregate of which purchases of wheat grown on any one farm or group of farms operated as a unit shall not exceed 5,000 bushels in any one crop year. A maximum of 5,000 bushels to be bought from any one producer in any one crop year is also fixed for purchases from producers. Any producer who sells, directly or indirectly, more than that amount to the Board is guilty of an offence and liable to a fine of ten cents per bushel on all wheat sold by him to the Board. It is further provided that the amount per bushel payable to producers shall be on basis in store at Fort William-Port Arthur or Vancouver and shall, in the case of No. 1 Manitoba Northern, be seventy cents. The provisions of the Canadian Wheat Board Act shall apply to wheat produced in the Eastern Division.

C. 47 is the Live Stock and Live Stock Products Act, 1939. Part I deals with stockyards. No proprietor of a stockyard shall buy or sell live stock on his stockyard or, except on written authority of the Minister of Agriculture, operate as a commission merchant. A proprietor has authority to prescribe the conditions of carrying on business on his stockyard and shall not permit persons suspended or expelled from membership in the live-stock exchange to operate thereon. Co-operative associations, commission merchants, or dealers engaged in business at stockyards at the date of the passing of this Act shall be permitted to continue subject to the regulations of the stockyards as approved by the Minister. Every proprietor shall file with the Department of Agriculture information concerning operations on his stockyard and shall submit to the Minister for approval all rules and regulations to be adopted thereon. The Minister may declare certain markets where live stock is bought and sold to be stockyards. Live-stock exchanges, whose rules and regulations

do not contravene any provision of the Act or regulations thereunder or the rules and regulations of the stockyard, may continue to function, and any farmer or drover may sell his own stock at a stockyard on his own account. Every stockyard and packer's yard shall be subject to inspection at all times. Under Part II all live stock and live-stock products shall be made available for inspection and grading as required by regulations. Offences are enumerated and penalties therefor laid down. Part III deals with poultry production. A Dominion Poultry Improvement Program, for the improvement of poultry stock and the eradication of disease therein, shall come into force in any specified province upon proclamation of the Governor in Council and in any province where not proclaimed the Program or any part thereof or policy thereunder may operate on a voluntary basis as prescribed by the regulations. No person may operate a hatchery in a province in which the Dominion Hatchery Approval Policy has been proclaimed without a permit, and every hatcheryman operating in such a province must submit to the Department of Agriculture for approval all advertising material intended for use by him. Only chicks produced and labelled under the Hatchery Approval Policy may be shipped from any place in Canada into any province in which such Policy has been proclaimed, and any chicks or poultry produced, packed, shipped, or imported in violation of this Act or regulation are subject to seizure. Powers of inspectors and penalties for the infraction of this Part or regulations are laid down. (The Poultry Improvement Program was proclaimed in effect in Alberta from Apr. 6, 1940, and in New Brunswick and Saskatchewan from Apr. 20, 1940.)

The Prairie Farm Assistance Act (c. 50 of the Statutes) provides for emergency relief and crop failure assistance to prairie farmers. *Emergency.*—An emergency year is defined as a crop year in which the average price of wheat (No. 1 Manitoba Northern in store at Fort William) is less than 80 cents per bushel and which has been declared by the Governor in Council as an emergency year under this Act. Certain specified amounts are to be paid to farmers in such years, computed according to yield per acre and in some circumstances in proportion to part of the amount by which the average price is less than 80 cents per bushel. The crop year 1939 is deemed to be an emergency year. *Crop Failure.*—If in each of not less than 135 townships in Saskatchewan or 100 in each of the provinces of Alberta and Manitoba, the average yield is found by the Minister to be five bushels per acre or less, such provincial area may be declared by the Governor in Council to be a crop-failure area and each farmer in a crop-failure area may receive \$200, or a sum not exceeding \$2.50 per acre with respect to half the cultivated acreage, not to exceed 200 acres, whichever is the greater. All regulations in connection with this Act are to be made by the Minister of Agriculture with the approval of the Governor in Council. It is also provided that, after deduction of freight, elevation, inspection, etc., charges, a levy of 1 p.c. shall be deducted from the purchase price of all grain purchased by licensed elevators and licensed buyers and dealers. Records of the levy must be kept by each licensee and returns made to the Board. All revenue in this connection is to be credited to the Prairie Farm Emergency Fund out of which the awards shall be paid. No farmer is to receive both emergency assistance and crop failure assistance in the same crop year. Every award is payable in two instalments and is protected from any attachment and is not assignable either at law or in equity. The offences and penalties in connection with this Act are laid down.

*Fisheries.*—The Fisheries Act (c. 42, 1932) is amended by c. 44. Authority is granted to the Minister of Fisheries to assess against owners or occupiers of obstructions, which it is not feasible to overcome by the provision of an efficient

fishway or canal, lump sums or annual sums of money for the purpose of constructing, operating, and maintaining such complete hatchery establishments as will, in the opinion of the Minister, meet the requirements for maintaining the annual return of migratory fishes.

The Salt Fish Board is created by c. 51 to investigate and make recommendations concerning the marketing of salt fish in the export trade with a view to improving conditions and bringing greater returns to the primary producer and the exporter, and to study and report upon methods of preparing, curing, and packing salt fish and providing for inspection thereof. The Board is empowered to give, with the approval of the Governor in Council, assistance to exporters on such terms and conditions as may be deemed necessary to ensure that such assistance reaches the fishermen-producers. The Board shall consist of three members appointed by the Governor in Council, the chairman to be an officer of the Department of Fisheries and the other two members to be appointed as representatives of the fishermen-producers, whether co-operative or otherwise. With the approval of the Governor in Council, the Board may appoint advisory committees to advise in connection with the marketing of fish, each committee to consist of three members two of whom shall represent the fishermen-producers and the other the dealers or exporters. Regulations necessary for the carrying out of this Act may be made by the Board with the approval of the Governor in Council. (This Act was proclaimed in effect from June 6, 1939.)

**Insurance, Trust, and Loan Companies.**—A section is added by c. 4 to the Loan Companies Act (c. 28, 1927) by which every loan company, whose incorporation is subject to the legislative jurisdiction of the Parliament of Canada, is declared to have possessed, since the date of its incorporation, the power to provide for the creation of a staff pension and insurance fund.

C. 9 adds a similar section to the Trust Companies Act (c. 29, 1927).

The Second Schedule of the Canadian and British Insurance Companies Act (c. 46, 1932) is amended by c. 10, which adds to the list of assets that may be vested in trust by any British company for the purposes of the Act, equipment trust obligations or certificates issued to finance the purchase of transportation equipment for a railway company incorporated in Canada, and securities of certain public bodies in Great Britain and the Dominions.

C. 18 makes a similar addition to Schedule I of the Foreign Insurance Companies Act (c. 47, 1932).

In order to prevent money-lenders from making undue charges against borrowers, the result of which increase the cost of loans without increasing the nominal rate of interest, c. 23 of the Statutes enacts the Small Loans Act, 1939. Part I provides that no money-lender shall, in respect of small loans as defined in the Act, charge or receive, directly or indirectly, more than 2 p.c. per month on the amount actually advanced to the borrower and monthly balances thereof from time to time outstanding for a loan for a period of fifteen months or less, or more than 1 p.c. and in addition thereto such proportion of 1 p.c. per month as fifteen is of the period of the loan expressed in months for a loan for more than fifteen months. Such loans shall be repayable in approximately equal instalments of principal or of principal and cost of the loan at intervals of not more than one month each, subject to the provisions laid down in Sect. 6. All money-lenders, with certain exceptions, must be licensed, such licences to be renewable annually or for any term less than a year

and the form of which shall be determined by the Minister of Finance. It is also provided that the chief place of business of every licensee shall be inspected at least once a year by the Superintendent of Insurance (or a duly qualified member of his staff) who has also authority to inspect the business of any unlicensed money-lender. Each licensee shall be assessed annually, in accordance with the provisions of the Department of Insurance Act (c. 45, 1932), for the purpose of meeting the expense incurred in connection with the administration of this Act. Part II applies to all incorporated small loans companies as defined by the Act, which may buy, sell, deal in, and lend money on security and may lend money in sums not exceeding \$500 subject to conditions identical with those laid down in Part I in connection with money-lenders. The provisions of Part I respecting licences, inspection, and assessment apply also to small loans companies. Such companies have power to borrow money or mortgage their real or personal property but shall not issue securities nor accept deposits. (The Act came into force on Jan. 1, 1940.)

**Justice.**—By c. 6, the Penitentiary Act (c. 154, R.S.C., 1927, and amendments) is repealed and the Penitentiary Act 1939 enacted. Under this Act the Minister of Justice and, under his direction and control, a Penitentiary Commission consisting of three commissioners, shall have control and management of all penitentiaries and all prisoners and other persons confined therein and over all matters connected therewith. Such assistant commissioners, not exceeding three, as may be required to assist the Commission may be appointed by the Governor in Council. The staff of the Penitentiary Branch shall be transferred to the Commission and the appointment of wardens and other executive officers, guards and other officers is provided for. It is provided that the Kingston, Ontario; St. Vincent de Paul, Quebec; Dorchester, New Brunswick; Stony Mountain, Manitoba; New Westminster, British Columbia; and Prince Albert, Saskatchewan penitentiaries, and all lands appertaining and all buildings and property belonging to them are to continue as penitentiaries of Canada. The Commission or any commissioner or, under the direction of the Commission, assistant commissioners shall have free access to penitentiaries and have power to assume control and to investigate the conduct of any employee. The warden of a penitentiary shall have the entire executive control and management of all its concerns, subject to the regulations duly established, and the written instructions of the Commission. Regulations are laid down with respect to: gratuity in the case of retirement or death of an officer and perquisites allowable to officers; conveyance, removal, and confinement of prisoners; documents and certificates respecting prisoners; transfer of incorrigible juveniles to a penitentiary from a reformatory, and of juvenile convicts susceptible of reformation from a penitentiary to a reformatory; insane prisoners; treatment of convicts; discharge or death of convicts; trespassing on penitentiary property. The provision made under the Appropriation Act 1939-40 for the Penitentiary Branch of the Department of Justice shall be interpreted as applying to the Commission. This Act is to be brought into force by proclamation.

By c. 14 the term of office of the Chief Justice of Canada is extended for a period of three years from Jan. 7, 1940, notwithstanding the proviso of the Supreme Court Act (c. 35, 1927) stating that each judge shall cease to hold office upon attaining the age of seventy-five years. The provision for an annuity equal to the salary of the office upon retirement continues to apply in this case.

The Criminal Code (c. 36, 1937) is amended by c. 30. Provisions concerning, among other matters, incitement to mutiny in His Majesty's forces, desertion, fraud

in connection with the sale of military stores, or buying or receiving military clothing or provisions are amended to apply to the air service as well as to the naval and military services. Any employer who refuses to employ or dismisses from employment any person for the sole reason that such person is a member of a lawful trade union or prevents workmen from belonging to such a union is liable to fine or imprisonment. By Sect. 12 (see also c. 23) the whole cost of a loan to a borrower shall not exceed 2 p.c. per month on the amount actually advanced and monthly balances thereof from time to time outstanding for a loan for fifteen months or less or 1 p.c. per month and in addition thereto such proportion of 1 p.c. per month as fifteen is of the period of the loan expressed in months for a loan for over fifteen months. Any money-lender who enters into a transaction to charge or receive directly or indirectly a sum in excess of such amount is guilty of an indictable offence. Other amendments are also made.

**Labour.**—C. 8 amends the Technical Education Act by extending the time during which the unexpended balance shall be carried forward for another five years from Mar. 31, 1939.

The alleviation of unemployment and agricultural distress is the object of c. 26. The preamble to this Act, the Unemployment and Agricultural Assistance Act, 1939, states that it is in the national interest that the Dominion should continue to support and supplement the measures of the provinces and other bodies to establish certain unemployed persons in gainful occupations, to train other unemployed persons for like establishment, and to assist those in need and thereby lessen provincial and municipal burdens consequent upon unemployment and agricultural distress. The Act authorizes the execution of such undertakings as the Governor in Council may determine to be in the general interest of Canada and requisite for the purposes of the Act, and the employment thereon of competent persons who are in receipt of relief is to be provided for, so far as it may be, in the opinion of the Governor in Council, practicable and consistent with reasonable efficiency and economy to do so. All contracts for undertakings carried out under provincial jurisdiction but to which the Dominion Government is contributing shall be approved by the Minister of Labour and the work thereunder supervised by the Dominion Government, unless otherwise provided by agreement. The Government may enter into agreements with any of the provinces respecting alleviation of unemployment conditions and of agricultural distress and may, where necessary, grant financial assistance to any province by way of loan, advance, or guarantee for the purpose of assisting the province to pay its share of the expenditures for such purposes. Agreements may be entered into with corporations, or partnerships, or individuals engaged in industry respecting expansion of industrial employment. No financial assistance by way of loan, advance, or guarantee shall be granted to any province unless certified statements as to the province's financial position, as the Dominion Government may require, are furnished. No financial assistance shall be granted to any province unless the province agrees to furnish such information and permit such examination and audit to be made as the Dominion may deem necessary.

C. 35, the Youth Training Act, 1939, provides for the payment out of the Consolidated Revenue Fund of Canada of \$1,500,000 during each of the fiscal years ending Mar. 31, 1940, 1941, and 1942, to be used for the purpose of promoting and assisting in the training of young people to fit them for gainful employment. The amount payable to any province under the provisions of this Act shall be determined

by the Governor in Council, and payments shall be conditional upon an agreement being entered into between the Minister of Labour and the government of the province concerned, and such agreements shall be subject in all cases to the approval of the Governor in Council. The Governor in Council may appoint a supervisor of youth training and may make all such orders and regulations as are necessary for the carrying out of this Act.

**National Defence.**—C. 42, cited as the Defence Purchases, Profits Control, and Financing Act, 1939, establishes a Defence Purchasing Board to control the awarding and performance of contracts for the purchase or manufacture of defence equipment and the construction of defence projects, to limit costs and control profits in respect of such contracts, and authorizes the raising by way of loans of such sums of money as may be required for the payment of expenditures of the Department of National Defence, which in the appropriations provided by Parliament for the Department are chargeable to capital account. The Board is to consist of a Chairman (who shall not, after his appointment as Chairman, be an officer or director of any industrial corporation or company) and not more than three other members, all to be appointed by the Governor in Council. The Board may, with the approval of the Governor in Council, employ such technical and professional officers as are necessary and fix their remuneration. Upon requisition made by the Minister of National Defence, the Board may negotiate, recommend to the Minister of Finance, and, subject to the approval of the Governor in Council, execute a contract and shall have the exclusive power to superintend and enforce the performance of all contracts as defined by the Act. Tenders shall be called for all contracts, except where deemed impracticable, in which cases it is the duty of the Board to ensure that the contracts be secured at a fair and reasonable cost to the Government without unfair profit to the contractor. Proposed contracts for the purchase of defence equipment outside of Canada must be reported by the Board to the Minister of Finance and by the latter to the Governor in Council, with a clear statement of the reasons why any such defence equipment is not to be purchased in Canada. If the net profit received in respect of any contract exceeds 5 p.c. per annum of the average amount of capital employed in the performance of the contract, the contractor shall be taxed by the amount by which the net profit exceeds said 5 p.c. The amount of capital employed, the net profit, and the tax payable, shall be determined by the Board on the basis set forth in the Act. All proposed contracts shall be submitted by the Board to the Minister of Finance, who shall submit them, with his recommendation, to the Governor in Council for approval. (The Act was proclaimed in effect from July 3, 1939.)

Under the Official Secrets Act (c. 49) any person is guilty of an indictable offence who, for any purpose prejudicial to the safety or interests of the State, approaches, inspects, passes over, or is in the neighbourhood of, or enters any prohibited place, makes sketches or plans, or obtains or communicates to another person information useful to a foreign power; or who unlawfully communicates, uses, retains, or fails to guard secret official documents or information in his possession or to which he has access; or who without lawful authority receives, retains, or allows others to have possession of such official information; or who, for any purpose prejudicial to the interests of the State makes unauthorized use of official uniforms or uses or has in his possession without lawful authority any die, seal, or stamp of any Government Department or diplomatic, naval, military, or air force authority, or any die, seal, or stamp so nearly resembling any such die, seal, or stamp as to be calculated to

deceive; or makes false statements or omissions, forges passports, or other official documents, or falsely represents himself to be a person holding office under His Majesty; or who has unlawful dealings with such dies, seals, or stamps as aforesaid; or who interferes in the vicinity of any prohibited place with officers of the police or members of His Majesty's forces; or who knowingly harbours any person whom he knows, or has reasonable grounds for supposing to be a person who is about to commit or who has committed, an offence under this Act; or who attempts to or incites others to commit offences against the Act. The Minister of Justice may require (by warrant under his hand) any person who owns or controls any telegraphic cable or wire, or any apparatus for wireless telegraphy, used for the sending or receipt of telegrams to or from any place out of Canada, to produce the originals and transcripts of all or of certain telegrams sent to or received from any place out of Canada and all other papers relating to any such telegram; and any person who, on being required to produce any such original or transcript or paper as aforesaid, refuses or neglects to do so shall be guilty of an offence prosecutable by summary conviction and shall be liable to imprisonment, or a fine, or to both. It is also provided that any person who is suspected of having committed or of being about to commit an offence against this Act may be arrested without a warrant, but no further proceedings may be taken without the consent of the Attorney General. Except in cases deemed to be of great emergency by an officer of the R.C.M.P. not below the rank of Superintendent, a warrant must be obtained from a justice of the peace for the searching of premises or persons found therein. If a corporation or company is found guilty of an offence against this Act, every officer and director of such corporation or company is guilty of the same offence unless he proves that the act or omission constituting the offence took place without his knowledge or consent. Penalties in connection with these offences are laid down, and Sects. 85 and 86 of the Criminal Code (c. 36, R.S.C. 1927) as well as the Official Secrets Act, 1911, of the United Kingdom, in so far as it is part of the law of Canada, dealing with information illegally obtained or communicated, are repealed.

**Pensions.**—The Pension Act (c. 157, R.S.C. 1927 and amendments) is further amended by c. 32. Appeal Boards of the Commission are established in lieu of the Pension Appeal Court. The power vested in the Canadian Pension Commission to cancel awards shall not extend to awards of entitlement granted by an Appeal Board of the Commission. Before a pension is cancelled or reduced, however, due to change in the basis of entitlement, a pensioner shall be afforded an opportunity of appearing before such an Appeal Board instead of a quorum of the Commission as previously. Quorums of the Commission having power to hear and adjudicate upon applications are replaced by Appeal Boards of the Commission, each consisting of three members. The decision of an Appeal Board is final and all appeals undisposed of by the Pension Appeal Court prior to July 1, 1939, when this Act comes into force, shall be heard and determined by Appeal Boards, no member of which shall adjudicate upon any case if he has previously been a member of the Commission. It is provided that the person now holding the office of Registrar of the Pension Appeal Court be appointed as a permanent employee of the Department of Pensions and National Health. The time for application for pension is extended to Jan. 1, 1942, for members of the forces who saw service in a theatre of actual war. Other amendments are also made.

**Trade and Commerce.**—The Food and Drugs Act (c. 76, R.S.C. 1927 and amendments) is further amended by c. 3. The definition of "drug" is revised to include cosmetics and any material that may be used for disinfection or control of

vermin in premises in which food is manufactured, prepared, or kept. "Medicine", "cosmetics", and "manufacture" are defined in paragraphs added to Sect. 2 of the Act. Regulations concerning the labelling of food and drugs and designating certain officers as Dominion analysts have been modified. The powers of the Governor in Council to make regulations are extended to the licensing of manufacturers of cosmetics, the prohibition of the sale of any substance injurious to health when used as a food or drug, exemptions from the requirements of the Act, and false or misleading claims for food or drugs. All regulations made under the Act are to be published in the *Canada Gazette*. The Department may order that the manufacturer of any article of food or drug shall furnish a declaration that the article has been made in accordance with the requirements of this Act and regulations thereunder, and customs entry of such an article shall be refused if duly certified copies of such a declaration are not included with the shipping papers. Any person who in any way advertises any food or drug in a manner that is misleading shall be guilty of an offence, and responsibility for the advertisement shall rest upon the person who causes it to be issued and not upon the printer, publisher, or other party who issues such advertisement in good faith. Under Part III (which is added to the Act) it is provided that the provisions of this Act shall not apply to packaged food or drugs not manufactured or sold for consumption in Canada, marked with the word "Export" and being the subject of a certificate that the package and its contents do not contravene any known requirement of the law of the country to which it is or is about to be consigned. This Act is to be brought into force by proclamation. (Portions of the Act were proclaimed in effect from Aug. 1, 1939.)

By c. 17 an addition is made to the Dominion Trade Industry Commission Act (c. 59, 1935) whereby the Governor in Council, upon the advice of the Trade and Industry Commission, may, for any commodity not subject to regulation under any other Act, prescribe standards of quality, establish grades, and prescribe the words by which the material content of the commodity shall be represented by marking on such commodity or on the package in which it is to be marketed, together with the manner and form in which it is to be offered for sale. Penalties for offences against this Section are laid down.

The definition of "can" and "canned fish or shellfish" as given in the Meat and Canned Foods Act (c. 77, R.S.C., 1927) is revised by c. 19 to include lobster meat cooked for sale, fresh or frozen, and packed in a can, bottle, or other container, but not preserved to keep. The labels on all cans of fish or shellfish imported into Canada must be marked in a plain and conspicuous manner.

By c. 29, the Trade Agreement entered into between Canada and the United States of America, a copy of which is set forth in the Schedule to the Act, is approved, and the Governor in Council is authorized to make such orders and regulations as are necessary to carry out the provisions of this Act and the Agreement. From the date of the coming into force of this Act, which date shall be fixed by Proclamation, the Canada-United States of America Trade Agreement Act, 1936 (c. 3, 1936), shall be repealed. (The Act was proclaimed in effect from June 17, 1939.)

**Transportation.**—By c. 2, independent auditors for the year 1939 are appointed to make a continuous audit of the accounts of the national railways, notwithstanding the provisions of Sect. 13 of the Canadian National-Canadian Pacific Act, 1933.

C. 11 is an Act to ratify and confirm the Agreement (published as Schedule to the Act) between the Canadian Pacific Railway Company and the Midland Railway

Company of Manitoba covering the joint use of certain tracks and premises belonging to the Canadian Pacific Railway Company at Winnipeg, Manitoba.

The Carriage by Air Act, 1939, is enacted by c. 12. It gives effect to a Convention for the unification of certain rules relating to International Carriage by Air, signed at Warsaw on Oct. 12, 1929, and makes provision for applying the rules contained in the said Convention, subject to exceptions, adaptations, and modifications, to carriage by air which is not international carriage within the meaning of the Convention.

C. 16 amends the Department of Transport Stores Act (c. 28, 1937). That part of Sect. 5 setting forth the bases upon which advances are made to the Minister is repealed, and the sole provision retained in that section is the one to the effect that such advances shall at no time exceed \$1,000,000. The inventory of stores at the end of each fiscal year, which formerly were not to exceed the amount of such stores at Apr. 1, 1937, are now limited to \$1,250,000.

By the Toronto Harbour Commissioners' Act, 1939 (c. 24), the Toronto Harbour Commissioners are empowered to construct and operate an airport on Toronto Island and an airport in the township of Toronto near the village of Malton, Ontario. The provisions of the Toronto Harbour Commissioners' Act, 1911, relating to the jurisdiction of the Toronto Harbour Commissioners shall apply to these airports. All previous Acts and Agreements relating to the establishing, constructing, or operating of the said airports, including the Agreement with the City of Toronto set forth in Schedule A to the Act, are validated and confirmed. The Toronto Harbour Commissioners are given certain powers in regard to the enforcement of regulations made by the Minister of Transport for the purpose of providing unobstructed air space for the landing and taking off of aircraft at the said airports.

C. 25 ratifies and confirms the transfer of certain parcels of land, situated in the City of Toronto and described in Schedules A, B, and C to the Act, from the Canadian National Railway Company, the Ontario and Quebec Railway Company, and Canadian Pacific Railway Company to the Toronto Terminals Railway Company. Such lands are declared to be vested in the Toronto Terminals Railway Company freed and discharged from all trusts and restrictions and from all claims whatsoever. Any claims against the said lands may be asserted for compensation against the conveying company and the compensation shall be fixed by arbitration under the Railway Act.

The Canadian National-Canadian Pacific Act, 1933 (c. 33 of the Statutes of 1932-33 as amended in 1936) is again amended by c. 37. A schedule is added, of which the chief provisions are: Every employee who is deprived of employment owing to co-operative agreements between the C.N.R. and the C.P.R. shall be allowed, for a specified period, a monthly compensation, based on length of service, equivalent to 60 p.c. of his average monthly compensation during the last twelve months of his employment. Such allowance shall cease before the expiration of its prescribed period if the employee returns to work or fails without good cause to return to work when recalled, or in case of resignation, death, retirement on pension, or on account of age, disability, or dismissal. The employee who is eligible to receive an adjustment allowance has the option of resigning and accepting in a lump sum a separation allowance determined by length of service. It is also provided that if an employee who is continued in employment is, within five years of the effective date of such co-operative arrangement, placed in a worse position because of the arrangement, he shall receive monthly a displacement allowance

of the amount by which the compensation he receives in each month in his current position after the arrangement is less than the average monthly compensation received before the arrangement. An employee who, by reason of such arrangement, is transferred from one place to another or from the service of one railway to another shall not be deprived of his pension rights and may continue to contribute to the pension fund of the company by which he was formerly employed, and upon retirement shall be entitled to receive his pension from that company. An employee who is required to change his place of residence as a direct result of such arrangement shall be compensated for all reasonable travelling and moving expenses, working time lost, or financial loss suffered through the sale of his home or the holding of an unexpired lease. A permanent Committee of Adjustment shall be formed for the purpose of enquiring into all matters in connection with and settling any disputes arising from the interpretation, application, or enforcement of this schedule. In case a dispute is not settled for thirty days it is to be referred to a Board of three arbitrators whose decision shall be final. The costs and expenses of the Board shall be borne equally by the parties of the proceedings.

C. 38 authorizes the provision of moneys to meet certain capital expenditures made and capital indebtedness incurred by the Canadian National Railways during the calendar year 1939. The Canadian National Railway Company is empowered, subject to the provisions laid down, to issue securities for the retirement of maturing obligations and the payment of sinking funds to the extent of \$8,152,707 and for capital improvements to the extent of \$17,669,000.

**Miscellaneous.**—Under c. 5 the agreement of Mar. 30, 1920, with the City of Ottawa for certain payments in lieu of part of rates and taxes for civic services and water, and in settlement of certain claims, which has been extended annually, may be further extended for another year as from July 1, 1938, by agreement between the Minister of Public Works, on behalf of His Majesty the King, and the Corporation of the City of Ottawa.

A National Film Board is created by c. 20 (which is the National Film Act, 1939) to discharge such duties as the Governor in Council may request it to undertake, and particularly to review film activities in Government Departments and to advise the Governor in Council in connection therewith. The Board is to consist of the Minister of Trade and Commerce as Chairman, another member of the King's Privy Council for Canada, three officials of the permanent Civil Service or of the Civil or Defence Services of Canada, and three persons outside the Civil Service. A Government Film Commissioner, who shall be the chief executive officer of the Board and responsible to it, will be appointed by the Governor in Council on the recommendation of the Board at such salary as may be determined by the Governor in Council. His duties shall be to advise upon the making and distribution of national films designed to help Canadians to understand the ways of living and the problems of fellow-Canadians living in other parts of Canada, and to advise as to the distribution of Government films in other countries, as to the methods of securing quality, economy, efficiency, and effective co-operation in the production, distribution, and exhibition of Government films and as to all departmental expenditures in connection therewith, to co-ordinate national and departmental film activities, act as intermediary between Departments and the Bureau, represent the Board in its relations with commercial and non-commercial film organizations and advise upon and approve production, distribution, and exhibition contracts in connection with Government film activities. All processing and production of films by and

for Government Departments is to be undertaken by the Government Motion Picture Bureau except where the Commissioner agrees that the work can be done through officers of other departments or where the Board considers the use of commercial films advisable in the public interest, and the Director of the Bureau shall act as advisory officer in the purchase, maintenance, and use of all film apparatus by Government departments and shall approve the terms of such purchase. The Act also provides for the establishment of a Central Government Film Distribution Service.

C. 22, the Seals Act, 1939, makes provision for the sealing of Royal Instruments. Under this Act any royal instrument may be issued by and with the authority of His Majesty the King and passed under the Great Seal of Canada or any other approved Royal Seal. Orders and regulations in respect of royal seals, the use thereof, royal instruments, and documents under the Sign Manual may be made by the Governor in Council subject to the approval of His Majesty the King.

The convention providing for the emergency regulation of the level of Rainy Lake and the level of other boundary waters in the Rainy Lake watershed, as set forth in the Schedule to the Act, is approved by c. 33. The International Joint Commission may determine the existence of emergency conditions and adopt measures of control that shall be binding upon all persons and authorities within Canada.

#### **Legislation of the Fifth Session of the Eighteenth Parliament, Sept. 7, 1939, to Sept. 13, 1939.**

A Special Session of Parliament was called, between Sept. 7 and Sept. 13, 1939, after war had been declared on Germany by the United Kingdom on Sept. 3, to define Canada's position and pass the necessary legislation to enable the Government to implement any obligations assumed. Ten Acts were passed at this, the Fifth Session of the Eighteenth Parliament; the purport of these is summarized hereunder.

**Finance and Taxation.**—C. 9 (the War Appropriation Act, 1939) authorizes the appropriation, out of the Consolidated Revenue Fund and apart from the ordinary grants of Parliament, of a further \$100,000,000 for national defence, security, peace, order and welfare, including any measure deemed necessary or advisable by the Governor in Council in consequence of the existence of a state of war; for the conduct of naval, military, and air operations in or beyond Canada; and for promoting the continuance of trade, industry, and business communications. Six Special Warrants issued by the Government immediately preceding the convocation of Parliament, as urgently and immediately required for the public good under Sect. 25 of the Consolidated Revenue and Audit Act, 1931, (c. 27, 1939) are to be met out of the sum thus appropriated. The Government is empowered to raise by way of loan such sums up to \$100,000,000 as may be required for the purposes of this Act.

The Government of Canada is also authorized to act as the agent of any British or foreign country allied with His Majesty for any purpose that will aid in the prosecution of the War and the Governor in Council is vested with power to make such orders and regulations as are necessary to carry out the Act. These shall have the full force of law but may be varied, extended, or revoked by subsequent orders or regulations.

The Income War Tax Act (c. 97, R.S.C. 1927) is amended by c. 6. A war surtax of 20 p.c. is made on the rates previously applicable to persons other than corporations and joint stock companies. The ordinary corporation rate is raised from 15 p.c. to 18 p.c. and that of consolidated corporations from 17 p.c. to 20 p.c. Deductions and exemptions from income are allowed up to 50 p.c. of the net taxable income actually paid to, and receipted for as such, by any approved patriotic organization in Canada.

By c. 4, the Excess Profits Tax Act, a tax is imposed on every person resident in Canada or who, not being resident, is carrying on business in Canada. Such tax is on profits derived from trade or business operations and according to the Schedule of Rates appended to the Act. Certain deductions and exemptions are allowable and details of how returns are to be made and taxes paid are laid down. The Act applies to the profits of the year 1940 and all periods ending therein after Mar. 31, 1940, and to subsequent periods.

**National Revenue.**—Schedule A of the Customs Tariff (c. 44, R.S.C. 1927), is amended by c. 2 by the imposition of additional specified rates of duties on certain kinds or grades of imported spirits, wine, beer, tobacco, cigarettes, tea, and other items. C. 5 amends the Excise Act, 1934 (c. 52, 1934) in relation to the duties on spirits, beer, malt and malt syrup, and tobacco, cigars, and cigarettes. Duties are raised on beer brewed from any substance other than malt, screened malt, and malt syrup produced in or imported into Canada, and on manufactured tobacco of all descriptions except cigarettes and on cigarettes weighing not more than 3 pounds per thousand.

The Special War Revenue Act (c. 179, R.S.C. 1927) is amended by c. 8 as regards the excise taxes on wines and sparkling wines sold by the Canadian manufacturer but not exported. In the former case the tax is increased from 7½ cents to 15 cents per gallon and in the latter from 75 cents to \$1.50 per gallon. A tax of 2 cents per pound is imposed on carbonic acid gas and similar preparations used for aerating non-alcoholic beverages.

**Administration.**—The organization of a Department of Munitions and Supply, under a Minister, is provided for by c. 3. The Minister is vested with full authority for carrying out the powers and duties set forth. The Minister shall examine into and organize the resources of Canada contributory to, the sources of supply of, and the agencies available for the supply of munitions of war and war supplies and for the execution of defence projects, and shall explore and estimate the present and prospective needs of the Government and the community in respect thereto, and generally take steps to mobilize, conserve, and co-ordinate the economic and industrial facilities available in respect of munitions, supplies, and defence projects for the prosecution of the war. Where there has been refusal to enter into contract, the Minister may enforce fulfilment of contracts to deliver supplies and may commandeer storage space or supplies on such terms as he deems fair and reasonable and arbitration is allowed for through a panel of arbitrators appointed by the Minister. By c. 7 the salary of the Minister of Munitions and Supply is fixed at \$10,000. (The Act was proclaimed in effect from Apr. 9, 1940.)

**Miscellaneous War Legislation.**—The Canadian Patriotic Fund is incorporated by c. 1. The objects of the Corporation are to promote co-ordination and co-operation between existing organizations and to provide, if any need shall arise, for the assistance of needy wives, children, and dependants, resident in Canada,

of officers and men on active service. Conditions are prescribed governing the organization of the corporation, property vested in the corporation, investments, and audit.

C. 10 is an Act relating to war charities. All funds having for their objects, or among their objects, the supplying of needs or comforts, or the relief of suffering and distress, for the personnel of the armed forces of Canada, their families or dependants, or for any other sufferers from the present war, or any other charitable purpose connected with the war, must be registered. The Secretary of State for Canada (or other Minister charged with the administration of the Act) is authorized to grant such registration upon certain conditions being fulfilled to his satisfaction. No such charity is permitted to solicit or make appeal to the public for donations, or to raise funds by means of bazaars, sales, entertainments, etc., unless registration has been effected. When registration has been effected, it is still an offence to make any collection unless authorization in writing, as stipulated in Sect. 4 of the Act, has been obtained. Certain conditions must be complied with, such as the maintenance of proper records and accounts, and the Secretary of State may make regulations prescribing the forms of registers, lists, and returns to be kept or made. A penalty of \$500 may be imposed upon summary conviction for an offence against the Act.

## Section 2.—Principal Events of the Year.

NOTE.—The review of economic and financial conditions, formerly treated in this chapter, will now be found in the Introduction to this volume.

**The Outbreak of War.**—A record of the principal events of the War, to Dec. 31, 1939, will be found at pp. 36-40 of this volume. Happenings from Jan. 1, 1940, to the date of going to press will be found in Appendix I, at pp. 1143-1148. A review of Canada's war effort is given in the Introduction to this volume, pp. xxiv-xliii.

**The Royal Family.**—The death of H.R.H. Princess Louise, Duchess of Argyle, occurred at London, Eng., on Dec. 3, 1939.

**The Governor General.**—The Dominion mourned the loss of His Excellency the Right Honourable the Baron Tweedsmuir of Elsfield, P.C., G.C.M.G., G.C.V.O., C.H., who died on Feb. 11, 1940. On Apr. 3 it was announced that Major-General the Earl of Athlone, K.G., P.C., G.C.B., G.C.M.G., G.C.V.O., D.S.O., had been appointed as His Majesty's representative for Canada. His Excellency arrived at Halifax on June 19, 1940, and was sworn in at Ottawa on June 21.

**Diplomatic Appointments.**—The personnel of Canadian diplomatic representatives abroad and of British and foreign envoys to Canada, as at the end of January, 1940, will be found at pp. 64-67 of this volume. Since the sending to press of Chapter III—Constitution and Government—the President of the French Republic has appointed M. René Ristelhueber as Minister of France to Canada. M. Ristelhueber presented his credentials to His Excellency the Administrator on June 3, 1940. The United States Minister to Canada, having resigned his appointment, left Ottawa on May 16, 1940, and on May 28 it was announced that the President of the United States appointed Mr. Jay Pierrepont Moffat as the new United States Minister to Canada. Hon. Mr. Moffat presented his credentials to His Excellency the Governor General on June 13, 1940.

**Trade Agreements.**—Information regarding trade agreements entered into during the year will be found in the External Trade Chapter, under Subsection 2, Tariff Relationships with Other Countries, pp. 483-494. Since that Chapter went

to press, an Exchange of Notes between Canada and Paraguay of May 21, 1940, effective one month later, granted the Canadian Intermediate Tariff to Paraguay in return for most-favoured-nation treatment in tariff matters of Canadian products imported into Paraguay. The tariff of Paraguay consists of a single column of duties, but provision exists for increasing duties by 50 p.c. against imports from countries adopting measures considered as prejudicial to Paraguayan commerce.

**Dominion-Provincial Relations.**—The report of the Royal Commission on Dominion-Provincial Relations was laid before Parliament on May 16, 1940. Recommendations include the definite division of the taxation field as between the Dominion and the Provinces, the assumption by the Dominion of the net provincial debts and of the costs of relief. Compensation to the provinces is provided by the recommendation that "national adjustment grants" take the place of the present Dominion subsidies to the provinces. The Report proper consists of three volumes entitled: (1) Canada, 1867-1939; (2) Recommendations; (3) Documentation, and may be obtained from the King's Printer, Ottawa, at a price of \$1 for the three volumes. A list of printed and mimeographed appendices, with their prices, will be found at p. 1110. A summary of the Report will be found in Appendix V at the end of this volume.

**Dominion General Election.**—A general election was held on Mar. 26, 1940, when the Liberal Government of the Rt. Hon. W. L. Mackenzie King was returned to power by a large majority. A list of the new Members of the House of Commons, showing the number of voters on the list and votes polled in each constituency, together with the party allegiance of each member, will be found in Appendix III, at p. 1150.

**Provincial General Elections.**—A general election took place in Quebec on Oct. 25, 1939, when the Union Nationale Government of Hon. Maurice Duplessis was decisively defeated by the Liberals led by M. Adelard Godbout.

In New Brunswick, on Nov. 20, 1939, the voters returned the Liberal administration of Hon. A. A. Dysart to power, although with a reduced majority.

A general election in Alberta, on Mar. 21, 1940, resulted in the return to power of the Social Credit Government of Hon. Wm. Aberhart.

### Section 3.—Obituary.

**1939.**—(See also pp. 1162-1163 of the 1939 Year Book.) July 22, J. Lambert Payne, Ottawa, Ont., former Comptroller of Railway Statistics, Dept. of Railways and Canals. July 29, Hon. P. H. Laporte, M.D., Edmundston, N.B., Minister of Health and Labour for New Brunswick. July 30, Sir Charles B. Gordon, G.B.E., Montreal, Que., President of the Bank of Montreal. Aug. 19, Major N. B. McLean, Belœil, Que., Chief Engineer, St. Lawrence Channel, Dept. of Transport. Aug. 20, Hon. H. G. Carroll, Quebec, Que., former Lieutenant-Governor of Quebec. L. L. Jenkins, Charlottetown, P.E.I., former Speaker of the P.E.I. Legislature. Aug. 21, Hon. Frank P. O'Connor, Toronto, Ont., Senator for Scarborough Junction, Ont. Aug. 24, Jos. H. Grisdale, D.Sc.A., B.Agr., Iroquois, Ont., former Deputy Minister of Agriculture. Aug. 26, T. D. Cumberland, Victoria, B.C., former Manitoba Judge. Sept. 15, Hon. John S. McLennan, Ottawa, Ont., Senator for Sydney. Sept. 17, Ven. John MacPherson Almond, M.A., D.C.L., C.M.G., C.B.E., V.D., Montreal, Que., former Director General of Chaplain Services. Oct. 12, Alonzo H. Guiou, Ottawa, Ont., former Chief, Marine Records Branch, Department of

Marine and Fisheries. Oct. 19, Alexander M. I. MacGregor, New Glasgow, N.S., former M.P. for Pietou. Oct. 24, Dr. Henry E. Young, Victoria, B.C., Medical Health Officer for British Columbia and former Minister of Education and Provincial Secretary. Oct. 28, A. E. MacLean, Summerside, P.E.I., M.P. for Prince. Nov. 3, Hon. ## APPENDIX I.

## Special War Chronology, 1940.

(This chronology is in continuance of that at pp. 36-40 of this volume.)

- Jan. 3, Finnish success near Lake Kianta. of 55,581 tons; Polish, 1 ship of 14,294 tons; German, 24 ships of 140,595 tons plus 19 ships of 88,123 tons captured. Neutral losses were 101 ships of 299,547 tons.
- Jan. 4, Britain announced the requisitioning of all deep-sea shipping as from Feb. 1.
- Jan. 5, Reorganization of British Cabinet. Britain sent military supplies to Sweden. Finns defeated Russians at Salla, 125 miles north of Lake Kianta. Russia and Bulgaria concluded a 3-year trade agreement.
- Jan. 7, Hon. C. D. Howe, in a radio address, announced a large ship-building program for Canada to cost \$17,000,000, and that orders had been placed for 4,367 aeroplanes.
- Jan. 8, Recruiting resumed for Canadian Active Service Force. Britain started rationing of butter, bacon, ham, and sugar. Foreign observers reported that Russians had suffered 130,000 casualties in Finnish War to date. Russians defeated by Finns southeast of Suomussalmi.
- Jan. 9, British air squadrons in France placed under a unified air command. Defensive alliance between Hungary and Italy reported.
- Jan. 14, Belgium and Holland evacuated civilians from border provinces facing Germany.
- Jan. 15, Canada's first publicly offered war loan placed on the market. United Kingdom notified that she could not respect the American 'neutrality belt' except under stringent conditions designed to prevent German warships from using the belt as a sanctuary.
- Jan. 20, United States protested delays to U. S. shipping in the Mediterranean caused by the British contraband control at Gibraltar.
- Jan. 22, The Ministers of Defence and Transport announced details of the British Commonwealth Air Training Plan, and stated that 25,000 Canadians had already volunteered for service in training schools. Lloyd's reported that 268 merchant ships of 1,003,651 tons had been sunk since the outbreak of war. British losses were 131 ships of 493,634 tons; French, 11 ships of 55,581 tons; Polish, 1 ship of 14,294 tons; German, 24 ships of 140,595 tons plus 19 ships of 88,123 tons captured. Neutral losses were 101 ships of 299,547 tons.
- Jan. 24, The Minister of Transport announced details of Canada's \$30,000,000 program of war expenditure. The first contingent of 71 British officers and 200 airmen arrived in Canada in connection with the Commonwealth Air Training Plan.
- Jan. 26, British ham and bacon ration doubled.
- Jan. 29, Largest German air attack to date on 14 British and neutral ships on the east coast of Britain.
- Feb. 1, The President of Finland offered to negotiate an "honourable peace" with Russia. Formation of the War-time Fisheries Advisory Board announced.
- Feb. 2, Russians launched heavy attacks on the Mannerheim Line at Summa, on the Karelian Isthmus.
- Feb. 7, The Minister of Defence announced that Canada had under arms 70,000 men in the C.A.S.F., 9,000 in the R.C.A.F., and 6,000 in the R.C.N.
- Feb. 8, Third Canadian contingent arrived in the United Kingdom. France announced the concentration of 275,000 troops in the Near East. Turkey seized the Krupp shipyards on the Golden Horn. Russia claimed the capture of 13 forts near Summa.
- Feb. 9-11, Renewed heavy Russian attacks on the Mannerheim Line.
- Feb. 12, Australian and New Zealand troops landed at Suez. Russians claimed successes in attacks on Mannerheim Line.
- Feb. 14, Germany announced that the American safety zone plan was not practicable.
- Feb. 16, H.M.S. *Cossack* rescued 300 British prisoners from the German fleet auxiliary ship *Altmark* in Norwegian waters. Russians captured towns of Leipasuo and Kamara, on Viipuri-Leningrad railway, together with much war material.

- Feb. 25, First R.C.A.F. squadron landed in England. Mr. Sumner Welles, United States Under-Secretary of State, arrived in Rome on a fact-finding tour for the President of the United States, in the course of which he visited the capitals of all the belligerent countries.
- Feb. 27, British First Lord of the Admiralty announced that, since the outbreak of war, 63,000 tons of British warships had been destroyed and 200,000 tons of merchant shipping, that at least 35 German submarines had been lost, and that 2,000 British merchant vessels had been defensively armed. The Finnish North Arctic army retreated to Nautsi. Fall of Koivisto fortress acknowledged.
- Feb. 29, First Canadian-built aeroplanes arrived in England.
- Mar. 5, Massing of fresh German troops on Netherlands border reported.
- Mar. 6, German aeroplanes commenced night bombing of shipping off the English and Scottish coasts.
- Mar. 7, Finns repulsed Russian attack on Viipuri.
- Mar. 11, Mr. Sumner Welles, U. S. Under-Secretary of State, was received by the King and also interviewed the Prime Minister and the Foreign Secretary.
- Mar. 13, R.C.A.F. establishment increased to 30,400. Finland and Russia signed peace treaty. Field Marshal Baron Mannerheim estimated Russian dead at 200,000 and Finnish dead at 45,000.
- Mar. 16, Canadian Active Service Force voters commenced to poll their ballots for the Nineteenth Dominion General Election.
- Mar. 18, Herr Hitler and Signor Mussolini held conference at Brennero.
- Mar. 19, Mr. Sumner Welles left Rome for the United States. R.A.F. bombed Sylt air base for 7 hours.
- Mar. 21, French Cabinet under M. Daladier resigned and new government formed by M. Paul Reynaud.
- Mar. 24, The United States agreed to permit the Allies to purchase her latest types of aeroplanes.
- Mar. 26, Nineteenth Dominion General election. Liberal party under Rt. Hon. W. L. Mackenzie King returned to power.
- Mar. 28, Allied Supreme War Council announced the tightening of the blockade against Germany and the extension of the Anglo-French alliance for the post-war period of reconstruction.
- Apr. 3, Reorganization of the British Cabinet, with Rt. Hon. Winston Churchill in charge of all armed services.
- Apr. 4, Brig.-Gen. Odium appointed to command Canada's second overseas division.
- Apr. 7, Britain learned that a large German naval force was proceeding along the Norwegian coast.
- Apr. 8, The Allies announced the mining of 3 areas in Norwegian territorial waters to prevent their use by German shipping. Trade agreement between the United Kingdom and Holland went into effect.
- Apr. 9, The Canadian Government announced the formation of the Department of Munitions and Supply. Germany invaded Denmark and Norway. Engagement between H.M.S. *Renown* and German battle cruiser *Scharnhorst* off Norway.
- Apr. 10, British destroyers inflicted heavy damage on German ships at Narvik, but were forced to withdraw. German cruisers and troopships sunk by the Royal Navy in the Skagerrak.
- Apr. 12, Britain announced the laying of a 420-mile-long minefield from the Dutch to the Norwegian coasts.
- Apr. 13, Second British naval attack on Narvik with heavy losses to German warships.
- Apr. 14, British troops landed at Namsos, north of Trondheim.
- Apr. 14, British troops landed at Narvik.
- Apr. 17, British troops landed at Andalsnes, south of Trondheim. Germans established control of the Trondheim railway to the Swedish border. Royal Navy attacked German air headquarters at Stavanger, Norway.
- Apr. 19, Members of British and French colonies left Budapest, in fear of a German invasion. The Netherlands placed under martial law.
- Apr. 22, Fierce fighting between Allies and Germans at Stiklestad, north of Trondheim. Admiralty statement showed British losses of 18 warships, including submarines, since the outbreak of

- hostilities, against 24 German ships, exclusive of a large number of submarines.
- Apr. 24, German forces reached Roros and Ringeir through the Osterdal and Gudbrandsdal valleys.
- Apr. 26, Allied forces forced to withdraw south of Dombas.
- Apr. 28, Allies repulsed heavy German attacks in the Gudbrandsdal valley. Fresh Allied troops landed at Namos.
- Apr. 30, Order in Council transferred foreign exchange of the Bank of Canada and of private owners to the Foreign Exchange Control Board. All British merchant shipping diverted from the Mediterranean.
- May 2, Allied forces withdrawn from southern Norway. Mr. Chamberlain summarized naval losses in Norway as: German, 3 or 4 cruisers, 11 destroyers, 5 submarines and 30 transports and supply ships; British, 4 destroyers, 3 submarines, 1 ship, 5 trawlers, and 1 supply ship.
- May 3, Franco-British battle fleet arrived at Alexandria, Egypt. Large-scale concentration of Italian naval, army, and air units in the Dodecanese Islands reported.
- May 5, Bulgarian sources reported 50,000 Turkish troops massed on Turco-Greek frontier. A Canadian National War Savings Committee appointed.
- May 6, German overland expedition to Narvik reached Mo. Further arrivals of Allied cruisers at Alexandria. Egypt enforced new precautionary measures. British and French troops from Norway arrived in Britain. Italo-Yugoslav frontier incidents. Italian troop concentrations north of Fiume.
- May 7, British reinforcements landed at Narvik. Mr. Chamberlain explained the Norwegian campaign to the House of Commons. Two German columns reported advancing on the Netherlands from Bremen and Düsseldorf. All Netherlands military leave cancelled. Germany reported to have requested permission to send troops through Hungary.
- May 8, British House of Commons voted confidence in the Chamberlain Government by 281 to 200, out of a total of 615 members. Mr. Churchill announced the taking of the airport at Narvik.
- May 9, German reinforcements landed by parachute at Narvik.
- May 10, Germany invaded Belgium, Holland, and Luxemburg. Air raids on aerodromes and open towns in Belgium, Holland, and France. British forces occupied Iceland. Rotterdam partly occupied by Germans. Allied forces came into contact with Germans in Luxemburg. Rt. Hon. Neville Chamberlain resigned and Rt. Hon. Winston Churchill became Prime Minister of the United Kingdom. Reorganization of Dominion Cabinet. Allied air forces attacked Germans holding Netherlands aerodromes.
- May 11, Britain landed 20,000 troops in Holland.
- May 12, Mr. Churchill and new all-party Cabinet sworn in. Germans crossed the Maas and IJssel Rivers in Holland; reached Waremmes in Belgium; and launched a widespread attack between Forbach and the Vosges. Heavy concentrations of German and Italian troops reported on the Swiss border. United Kingdom interned all German and Austrian males of 16 to 60 living in the eastern part of Great Britain.
- May 13, German advance checked in the Liège sector, but reached the Zuider Zee in Holland. The Netherlands Government vacated The Hague and Queen Wilhelmina and the Royal Family sought refuge in England. Great battle between French and German tanks near St. Trond.
- May 14, Netherlands troops capitulated except in Zeeland. Strong German attack near Sedan checked by French.
- May 15, Communist Party in Canada declared an illegal organization. French counter-attack launched at Sedan, British engaged at Louvain. R.A.F. delivered low-level bombing attacks on German troop concentrations.
- May 15- June 4, "BATTLE OF FLANDERS"—May 15, Germans broke through French lines on a 60-mile front along the Meuse, from Namur to Sedan. May 17, Germans advanced to Avesnes and Vervins. General Gamelin issued his "conquer or die" order. May 19, Gen. Gamelin superseded by Gen. Weygand as Allied Commander-in-Chief. May 21, Germans occupied Arras and Amiens and reached Abbeville. May 22, Allies temporarily checked German advance on a 200-mile front along the Somme and

- Aisne. *May 23*, Germans reached Boulogne, Allies counter-attacked at Cambrai and Amiens and repulsed an attack on the Aisne. *May 24*, Germans advanced towards Calais. *May 25*, British launched attacks near Baupaume and on the Scheldt and Allied troops pressed on the Valenciennes-Cambrai front. *May 26*, Germans captured Boulogne and launched heavy attacks on Belgian front from the sea to Menin. British troops advanced to aid of Belgians. *May 28*, King Leopold of the Belgians ordered his army to surrender, thus leaving the British left flank exposed. Belgian Government repudiated the King's action. British and French forces retreated towards Dunquerque. French attacked on the Somme to relieve pressure on Flanders front, and registered some gains. *May 29*, French engaged Germans at Lille, covering retreat of Allies to Dunquerque. Germans took Calais. *May 30*, First Allied troops withdrawn from Flanders embarked at Dunquerque, under protection of R.N. and R.A.F., and landed in England. Dunquerque and Yser Valley flooded to halt German advance. *June 4*, Allies abandoned Dunquerque, after having evacuated 335,000 troops. Six British destroyers and 23 minor craft lost in evacuation.
- May 16*, Greece reinforced troops on the Albanian border. British counter-attack at Louvain. Swiss-German Rhine frontier closed. Belgian Government moved to Ostend.
- May 17*, Netherlands forces abandon the Islands of Beveland and Walcheren. British withdrew to west of Brussels. R.A.F. delivered heavy attacks on German positions and bases.
- May 18*, In Belgium, Germans advanced to Antwerp and Namur.
- May 19*, R.A.F. bombed oil tanks at Bremen, Hamburg, and Hanover. Germans reached St. Quentin and Laon. Belgian Government moved from Ostend to Saint-Adresse, near Le Havre, France.
- May 20*, Prime Minister King announced the intention to form a Canadian Corps in the field and the raising of a Third Division. Canada's war outlay estimated at \$700,000,000 in the current year. Strength of the R.C.N. reported as 6,000, of the military forces as 100,000, and the R.C.A.F. as 12,000. Ninety war vessels were reported as under construction.
- May 21*, Canada ordered two destroyers in England.
- May 22*, Canadian Ministry of Defence for Air set up. Canadian and Allied war contracts in Canada totalled \$300,000,000 to date. British Parliament enacted the Emergency Powers Defence Act, conscripting all persons and property in the United Kingdom. Roumania completed mobilization.
- May 23*, Leading British Facists arrested. R.A.F. attacked heavily, reaching Leipzig. Canadian Veterans Home Guard authorized.
- May 24*, H.M. the King broadcasted a message of encouragement to the peoples of the Empire.
- May 26*, Reorganization of British commands at home.
- May 28*, Dept. of Munitions and Supply announced the extension of Canada's facilities for the making of shells. Narvik captured by Allies.
- May 29*, Second R.C.A.F. contingent arrived in Britain. Dominion Parliament passed war appropriation of \$700,000,000, and passed Air Force Act. Second B.E.F. landed in France and joined French on the Somme.
- May 30*, R.C.M.P. commenced to arrest members of the National Unity party. Border guards strengthened in the Windsor, Ont., area. R.A.F. brought down 77 German aeroplanes. Women and children ordered evacuated from entire southeast coast of England.
- May 31*, French repulsed heavy attempts of Germans to cross the Aisne and open the Marne plain from the northeast. Allied troops pursued Germans retreating eastward from Narvik.
- June 1*, Composition of units of Third and Fourth Canadian Divisions announced. German losses since May 10 computed at 500,000 men. Air raids on Lyons and Marseilles.
- June 3*, Admiralty announced the blocking of Zeebrugge and other channel ports. Between 250 and 300 German aeroplanes bombed Paris, 1,050 bombs dropped, 254 persons killed and 652 wounded, 17 German machines brought down.
- June 5- June 25*, "BATTLE OF FRANCE"—*June 5*, German advance on a 150-mile front along the Somme reported held by new "Weygand System". Reorganization of French

Cabinet involving resignation of M. Daladier. *June 6*, Germans advanced along the coast to Bresle River, but later were forced to retire towards Abbeville. On the east, Germans advanced six miles to the Aisne heights. *June 7*, Allied advance guards withdrew all along the Somme, but German units crossing the Aisne east of Soissons were repulsed. *June 8*, German pressure diminished on the lower Bresle but increased west of the Oise between Aumale and Noyon and east of the Oise. Germans reached the heights south of Aisne. *June 9*, Germans attacked with 1,800,000 men from the Argonne Forest to the sea. Advanced units reached Rouen and moved on Gisors, 35 miles northwest of Paris. *June 10*, French Government left Paris for Tours. *June 11*, French fell back across the Marne. *June 12*, Germans crossed the Marne at Château Thierry with heavy fighting at Reims. Three main German thrusts formed semicircle about Paris. Heavy British reinforcements sent to French. Czecho-Slovak units joined Allies at the front. *June 13*, Premier Reynaud made final appeal to President Roosevelt for "clouds" of aircraft. Paris declared open city. Germans crossed Seine at Louviers, Les Andelys, and Vernon. *June 14*, Germans reached Paris. French retired to the Loire. Seat of French Government moved to Bordeaux. German frontal attack on Maginot Line repulsed. Britain sent all possible aid to France and expanded her war purchases. *June 16*, French withdrew from Maginot Line to strengthen field armies as Germans broke through in Champagne and reached Gray, 40 miles from Swiss frontier. In central France Germans reached the Yonne River. Britain offered to conclude a "solemn act of union" with France. The offer was refused. Resignation of Reynaud Government and appointment of Marshal Pétain as Premier and General Weygand as Minister of National Defence. *June 17*, French Government requested an "honourable peace" with Germany. Germans crossed the Loire and took Orleans. Heavy fighting in the Jura Mountains with 300,000 French Lower Maginot Line troops retreating

to a line on the Lower Jura. British troops withdrawn from France. *June 18*, French armies, broken into four sections, continued to resist German advance. Meeting of Herr Hitler and Signor Mussolini at Munich to consider terms of peace with France. Germans reach Cherbourg and Rennes. Mr. Churchill appealed to the French people to continue fighting; in London, the French General de Gaulle appealed to all Frenchmen in England to rally to the support of Britain.

*June 19*, German advances continued towards Nantes, the Cher River, and Lyon. Air raids at Bordeaux killed 150 civilians. *June 20*, French and German delegates met to discuss peace terms. *June 21*, Franco-German peace delegates met in Forest of Compiègne where Herr Hitler announced Germany's terms and arrangements for a Franco-Italian peace. French troops in Vosges repulsed enemy assaults. *June 23*, British Ministry of Information disclosed Franco-German peace terms as including complete French demobilization, German occupation of more than half of France, including all the Atlantic coast, surrender of all weapons (including the Navy and Air Force), and non-participation of French colonies in further military operations. United Kingdom extended formal recognition to French National Committee in London. Italian Government handed armistice terms to French delegates at a meeting near Rome. *June 25*, Italian peace terms announced. Occupation of a border belt in the Alps, demilitarization of French colonial outposts in North Africa, and full rights over Jibuti added to German terms. France ceased hostilities.

- June 5*, Canada declared 16 disruptive organizations to be illegal bodies. Italy proclaimed a 12-mile danger zone around her coastal waters.
- June 6*, United States Government made 50 aeroplanes available to the Allies. United States passport requirements extended to all North American and West Indian countries and colonies.
- June 7*, Immediate construction of 300 tanks in Canada announced. All Italian ships ordered off the high seas.
- June 9*, Naval encounter off Narvik, H.M. aircraft carrier *Glorious*

- and other British vessels sunk. Norwegian resistance terminated as Allied forces withdrew from Narvik. King Haakon and the Norwegian Government moved to London.
- June 10, Italy declared war on Britain and France. Canada declared that a state of war existed with Italy.
- June 11, R.A.F. bombed Italian air bases in Libya and Eritrea. Italian air attacks on Malta. South African Air Force bombed objectives on Kenya-Ethiopian frontier. Sending of Canadian supplies to Greenland announced. H.R.H. Princess Juliana of the Netherlands arrived in Canada.
- June 14, Spaniards occupied International Zone at Tangier.
- June 15, H.M.S. *Calypto* reported sunk.
- June 16, Russia occupied Lithuania and demanded rights of passage for her troops in Latvia and Estonia.
- June 18, Prime Minister King announced the setting-up of a Department of National War Services and that Canadian troops were on duty in Newfoundland and Iceland. German air raids on east coast of England.
- June 20, Formation of reserve companies to Veteran's Home Guard announced from Ottawa. Australian and New Zealand troops landed in England.
- June 21, Dominion Parliament passed an Act authorizing the Government to organize the economic resources and man-power of the country. Severe German air raids on southern and eastern England. R.A.F. bombed Berlin. Reorganization of Roumanian Government on totalitarian lines. Further Canadian troops arrived in England. National Unity Party and Technocracy, Inc., declared illegal organizations, with 11 members of former party interned. Order in Council provided for state seizure of all property of organizations declared illegal.
- June 24, Canada's War Budget presented in the House of Commons, levying new taxes estimated to realize \$280,100,000 per annum. Widespread air raids over Britain, extending as far as Wales. Clashes reported on Russo-Roumanian border.
- June 25, Japanese warships despatched to Haiphong, French Indo-China. Combined British naval, military, and air forces raided points on west coast of France.
- June 26, French fleet left Gibraltar for Casablanca and Algiers.
- June 27, Roumania agreed to Soviet demand for cession of Bessarabia and North Bukowina and control of certain ports, and moved troops to Hungarian border in anticipation of Hungarian attempt on Transylvania. Turkish fleet moved to Black Sea.
- June 28, German air raids over demilitarized Channel Islands. Canadian destroyer *Fraser* reported sunk in collision, with 45 dead or missing. British Government formally recognized General Charles de Gaulle as "the leader of all free Frenchmen".
- June 30, Russia requested permission of Turkey to participate in defence of Dardanelles.
- July 1, First arrival of German prisoners of war in Canada announced. Germans occupied Channel Islands. Vice-Admiral Muselier appointed as commander of "all free French naval forces".
- July 2, First evacuated British children arrived in Canada. Hungary continued to mobilize. Establishment of Wartime Industries Control Board announced at Ottawa. Extension of British blockade to French ports announced.
- July 3, S. S. *Arandora Star*, loaded with German and Italian internees torpedoed off Iceland with loss of about 1,000 lives.
- July 4, Britain took control of French fleet in British ports. Action off Oran, Algeria, resulted in loss of 1 French battleship, with 2 others damaged, 1 seaplane carrier, and 2 destroyers. New Roumanian Government announced its foreign policy as an "honest adaptation to the system created by the Rome-Berlin axis".
- July 5, Compulsory military training in all Canadian universities announced.
- July 6, France broke off diplomatic relations with the United Kingdom. Franco-Italo-German air forces bombed Gibraltar.
- July 7, British authorities in Egypt announced demilitarization of the French East Mediterranean fleet. Herr Hitler and Count Ciano conferred at Berlin.
- July 8, Canada instituted a separate Department of National Defence for Naval Affairs. Britain refused Japan's request to close the "Burma road" to China. Successful action by British against the French battleship *Richelieu* at Dakar, West Africa.

## APPENDIX II.

## External Trade of Canada in the Calendar Year 1939.

Preliminary figures of the external trade of Canada for the calendar year 1939 show a grand total trade of \$1,686,977,247, as compared with a figure of \$1,526,135,487 in the preceding year, or an increase of \$160,841,760. The increase in the imports was \$73,604,180. Domestic exports increased by \$87,342,187 while foreign exports decreased by \$104,607. Figures by industrial groups are given in the following table. Statistics of external trade will be published in future on a calendar year basis, and the figures given in this Appendix are, therefore, not comparable with the fiscal year figures at pp. 526 and 534-535 of this volume.

## Imports and Exports of Canada, Calendar Year 1939.

Industrial Group.	Value.
<b>Imports.</b>	<b>\$</b>
Agricultural and vegetable products.....	127,835,146
Animals and animal products.....	32,757,666
Fibres, textiles, and textile products.....	100,866,078
Wood, wood products, and paper.....	33,703,149
Iron and its products.....	183,159,650
Non-ferrous metals and their products.....	42,108,374
Non-metallic minerals and their products.....	132,823,892
Chemicals and allied products.....	43,705,905
Miscellaneous commodities.....	54,095,674
<b>Total Imports.....</b>	<b>751,055,534</b>
Total Dutiable Imports.....	427,470,633
Total Free Imports.....	323,584,901
Duty Collected.....	103,282,895
<b>Exports.</b>	
Agricultural and vegetable products.....	220,118,056
Animals and animal products.....	131,803,706
Fibres, textiles, and textile products.....	14,427,669
Wood, wood products, and paper.....	242,541,043
Iron and its products.....	63,102,432
Non-ferrous metals and their products.....	182,890,103
Non-metallic minerals and their products.....	29,332,099
Chemicals and allied products.....	24,263,342
Miscellaneous commodities.....	16,447,654
Total Domestic Exports.....	924,926,104
Total Foreign Exports.....	10,995,609
<b>Total Exports.....</b>	<b>935,921,713</b>
<b>Grand Total External Trade.....</b>	<b>1,686,977,247</b>

## APPENDIX III.

**1.—Electoral Districts, Voters on List and Votes Polled, Names and Addresses of Members of the House of Commons, as Elected at the Nineteenth General Election, Mar. 26, 1940.**

NOTE.—This information, except the populations of constituencies and party affiliations, has been supplied by the Chief Electoral Officer, Ottawa. The figures of voters on the list and votes polled are subject to revision.

Province and Electoral District.	Population, 1931.	Voters on List.	Votes Polled.	Name of Member.	Party Affiliation.	P.O. Address.

Minister of Finance: Hon. J. L. Ilsley.

Minister of Fisheries: Hon. J. E. Michaud.

Minister of Munitions and Supply: Hon. C. D. Howe.

Minister of Agriculture and Minister of National War Services: Hon. J. G. Gardiner.

Minister of Labour: Hon. N. A. McLarty.

Minister of Trade and Commerce: Hon. J. A. MacKinnon.

Minister of Mines and Resources: Hon. T. A. Crerar.

Secretary of State: Hon. P. F. Casgrain.

Minister of National Revenue: Hon. C. W. Gibson.

Minister of National Defence for Naval Affairs: Hon. A. L. Macdonald.

Postmaster General: Hon. W. P. Mulock.

## APPENDIX IV.

## Survey of Production, 1937-38.

Despite a recession of 7 p.c. in wholesale prices, the decline in the net value of production during 1938 from the preceding year was limited to 0.6 p.c. Advances in agriculture, fisheries, and electric power nearly counterbalanced declines in manufacturing, forestry, and trapping. Mining, construction, and custom and repair were well maintained in 1938.

In the provincial analysis gains were shown in only three of the nine areas, notably in Saskatchewan and Prince Edward Island, where agriculture predominates.

1.—Gross and Net Values of Production in Canada, by Industries, 1937<sup>1</sup> and 1938.

<sup>1</sup> Revised figures are given here for 1937 which were not available when Chapter VII—Survey of Production—went to press.

<sup>2</sup> See Chapter VII for explanation of gross and net value of production.

<sup>3</sup> Gross value comprises industrial mineral production shown in Chapter XII, Table 1, plus the value of ores, etc., of the smelting industry.

<sup>4</sup> Revised upward owing to the inclusion of certain groups formerly classified as manufacturing and service.

<sup>5</sup> The item "Manufactures" includes dairy factories, sawmills, pulp and paper mills, etc., which are also included in other headings above. This duplication, amounting in 1937 to a gross of \$830,881,358 and a net of \$313,225,585, and in 1938 to a gross of \$751,080,705 and a net of \$274,847,304, is eliminated from the grand total.

<sup>6</sup> Secondary production includes the above-mentioned duplication. The percentage of net manufactures, less duplication, to the total net production in 1938 was 38.8.

## APPENDIX V.

**The Report of The Royal Commission on Dominion-Provincial Relations.**

The Royal Commission on Dominion-Provincial Relations was appointed on Aug. 14, 1937, to re-examine the economic and financial basis of Confederation and the distribution of legislative powers in the light of the economic and social developments of the past seventy years. The Commissioners were instructed more particularly to inquire into the constitutional allocation of revenue sources in relation to the governmental burdens borne by the Dominion and Provincial Governments; to investigate the effects of taxation in relation to constitutional limitations and financial and economic conditions; to examine generally public expenditures and public debts, in order to determine whether the present division of the burdens of government is equitable; and to investigate the question of Dominion subsidies and grants to Provincial Governments. Sittings of inquiry were opened at Winnipeg on Nov. 29, 1937.

The Commissioners appointed were: the Hon. Newton W. Rowell, LL.D., Chief Justice of the Supreme Court of Ontario (Chairman); the Hon. Thibaudeau Rinfret, Justice of the Supreme Court of Canada; John W. Dafoe, LL.D., Winnipeg, Man.; Robert Alexander MacKay, Ph.D., Professor of Government, Dalhousie University, Halifax, N.S.; and Henry Falls Angus, M.A., B.C.L., Professor of Economics, University of British Columbia, Vancouver, B.C. Owing to ill health, the Hon. Thibaudeau Rinfret tendered his resignation as Member of the Commission on Nov. 18, 1937, and Joseph Sirois, LL.D. of the City of Quebec, Notary Public, Professor of Constitutional and Administrative Law at Laval University, was appointed in his place. On Nov. 22, 1938, Dr. Joseph Sirois was appointed Chairman, vice the Hon. Newton Wesley Rowell, LL.D., resigned.

In framing the recommendations it was the aim of the Commission to make proposals which, if implemented, would place jurisdiction over social and governmental services in the hands of the governments most likely to design and administer them, not merely with the greatest economical and technical efficiency, but with regard for the social, cultural, and religious outlook of the various regions of Canada. The financial proposals, which are basic to the other recommendations made, are designed, in the view of the Commission, to enable each province in Canada to have sufficient revenue at its command under all circumstances—in years of adversity as in years of prosperity—to carry out the important functions entrusted to it in other sections of the Report. They are framed to produce this result and at the same time to leave the fiscal powers of the Dominion as wide in fact as they have always been in law, so that the central government may be free to direct the wealth of the nation as the national interest may require.

In the first place the Commission points to three functions of government that can be more equitably and efficiently performed on a national than on a regional or provincial basis.

**(1) The Maintenance of Those Unemployed who are Employable and of their Dependants.**—In this connection the Commission merely confirms conclusions that had been reached by earlier Commissions (such as the National Employment Commission of 1936-38). But so firmly is the Commission convinced that this should be a Federal function that, even if its main recommendations should not be implemented, it has proceeded on the assumption that this function should be a Dominion affair.

(2) **Assistance to Primary Industries (e.g., Agriculture).**—In this regard the Commission states that when relief is on a small scale, responsibility can be borne without difficulty by a province. But in the event of widespread disaster with which the province is unable to cope without assistance from the Dominion, or in the event that the Dominion has already established effective control of the industry, the Commission recommends that the Dominion should assume direct administration and financial responsibility rather than render indirect assistance in the form of advances to the provinces so affected.

(3) **The Payment of Non-Contributory Old Age Pensions.**—In this matter it is pointed out that the Dominion Government is already paying as high a proportion of their cost as it can reasonably be expected to pay without assuming control of the administration. The Commission is convinced that it is more satisfactory for the provinces to continue to administer non-contributory old age pensions and, therefore, does not recommend any further financial help to the provinces in this connection. If non-contributory old age pensions were to be superseded or supplemented by a contributory system, the Commission feels that the whole should, for various reasons, be under the control of the Dominion.

### **The Financial Proposals of the Report.**

The financial proposals, made by the Commission on the basis of a comprehensive study of the comparative statistics of all governments (see Appendix VI), are designed to enable the Dominion and Provincial Governments to carry out their responsibilities under the new distribution of powers recommended. They thus form the basis of a structure that will, in the opinion of the Commission, characterize a healthy Federal system in Canada in terms of the economic life of 1939. The broad question of financial adjustments is dealt with under the following heads.

(A) **Provincial Debts.**—This is an important financial burden of which the Provincial Governments can be relieved without any sacrifice of autonomy. The burden taken up by the Dominion, if it were to assume the dead-weight costs of the provincial debt services, would, it is held, be less than the burdens of which the provinces were relieved because, as maturities occurred, the debts could be refunded more advantageously by the Dominion than by the provinces. The Commission has, therefore, recommended that the Dominion should assume all provincial debts (both direct and guaranteed) and that each province should pay over to the Dominion an annual sum equal to the interest that it now receives from its investments. The reason for this proviso is that it would not be expedient for the Dominion to take over liabilities for a debt that represents a self-liquidating investment retained by the province. Conditions concerning future provincial borrowers are laid down in detail in the Report.

In the case of the Province of Quebec the recommendation with regard to debt service carries an important modification. The per capita debt of this Province is low in comparison with that of other provinces, and is an unusually low fraction of the combined municipal and provincial debt of the province, due to the policy of imposing on municipalities onerous functions that are performed elsewhere by Provincial Governments. The Commission, therefore, recommends that the Dominion take over the larger of either the provincial net debt service or 40 p.c. of the combined provincial and municipal net debt service.

(B) **Provincial Subsidies.**—If, in accordance with the above recommendation, the provinces are relieved of the burden of their debt, it is felt that they should surrender to the Dominion the cash subsidies they now receive from the

Dominion. Prince Edward Island alone would give up subsidies more than equivalent to the cost of its debt, but this apparent loss is made up in other ways. It is held that the abolition of the provincial subsidies would be in itself no inconsiderable reform, for their history is long and tortuous. The subsidies have been based on no clear principles and it has been impossible to say whether or not different provinces have received equal treatment in the past.

(C) **Adjustments in the Field of Taxation.**—In order to compensate the Dominion for the very onerous burdens it would thus undertake, the Report of the Commission provides that the Dominion take over, absolutely, certain sources of revenue that the provinces have hitherto tapped, in order to enable it to carry the new burdens. There could, of course, be no question of increasing the legal taxing powers of the Dominion, since these are already unlimited, but the provinces, in return for the benefits they would receive, should, it is felt, be prepared to renounce some of the taxes that they are entitled to raise at present. On the other hand, the Dominion should be able and willing to refrain from competing with the provinces in respect of sources of revenue finally left to them, and should leave the provinces free to collect such revenues in whatever way appears to them most efficient, even if the method of indirect taxation should be involved. There are several taxes of such a nature that, if they were under unified control, would produce a revenue as great as that obtained at present with less hardship to the taxpayer, and a reorganization of these taxes is possible only if they are under unified control. Such a reorganization could remove many hindrances that in the recent past have been detrimental to the expansion of the national income, which expands as a result of greater efficiency in taxation. The following three taxes are specifically mentioned:

(i) *Taxes on Personal Incomes.*—Not all provinces impose these taxes. It is pointed out that those that get most revenue from them are often taxing incomes that other provinces think they should have a share in taxing, because they are, in part at least, earned therein even though received in the provinces where the individuals live or in which large corporations have their head offices. The Report states that the general equity of the whole Canadian tax system requires that the tax on personal incomes, which is one of the very few taxes capable of any desired graduation, should be used to supplement other taxes and should be uniform throughout Canada.

(ii) *Corporation Taxes.*—The Commission recommends that the provinces should forego those taxes imposed on corporations that individuals or partnerships carrying on the same business as such corporations would not be required to pay and taxes on those businesses that only corporations engage in. The Commission states that provincial corporation taxes have been particularly vexatious to the taxpayer and very detrimental to the expansion of the national income. It is admitted, however, that to ask the provinces to give up the entire revenue they now derive from taxing corporations would not be equitable inasmuch as the Dominion would receive taxes on income that, in part, represented the depletion of irreplaceable natural wealth. So far as a separation can be made, such revenue should be used for developmental work, which will compensate for the resources of a province that have been used. It is, therefore, recommended that the Dominion should pay over to the province concerned 10 p.c. of the corporate income derived from the exploitation of mineral wealth.

Bona fide licence fees are not included in such taxes as fall under (i) and (ii). Power to impose these would remain with the provinces.

(iii) *Succession Duties*.—In this regard it is recommended that the provinces should forego the collection of various forms of succession duty. In this particular the departure is more marked than in the case of income taxes, since succession duties have not hitherto been used by the Dominion as sources of revenue, but they are taxes to which the Dominion might at any time be compelled to resort. The Report states that the use made of them by the provinces has given rise to bitter complaints because the provinces have not made equitable arrangements with one another so as to tax each item in an estate in one province only. It is held that the differences in rates between provinces and the danger of double taxation seriously distort investment in Canada and the potential competition between provinces desirous of attracting wealthy residents has made it impossible to use these delicate instruments of taxation as a means for giving effect to social policies.

(D) *The National Adjustment Grant*.—The Commission realizes that after the provinces had been relieved of the cost of unemployment relief and of the dead-weight burden of their debt and had, on the other hand, given up their right to impose personal income taxes, corporation taxes, and succession duties, they would find themselves with far less variable expenditures than in the past and also with less variable revenues, and the size of the probable surplus or deficit that would result has been worked out in each case. Naturally if a province were left with a prospective annual deficit, it would be unable to provide for the reasonable needs of its citizens on a par with standards in other provinces unless it could increase its revenue or reduce its expenditures. The Commission is not concerned so much with the services that each province is at present providing as with the average Canadian standard of services that the province must be put in a position to finance. In working out data for each province adjustments have been made for the cost of developmental services appropriate to each province and for the weight of taxation in each case. As a result, the Commission has made a recommendation as to the amount each individual province should receive annually from the Dominion to enable it to provide normal Canadian services on a Canadian standard with no more than normal Canadian taxation. Peculiar difficulties were encountered in the case of Quebec because of the extent to which educational and social services in the Province are provided, not by taxation but by the Church; such difficulties are met in as fair a way as possible. The Commission recommends that each province found to be in need of such a payment should receive an annual National Adjustment Grant from the Dominion of Canada. This grant as originally fixed would be irreducible, but such grants should, it is felt, be re-appraised every five years. Since it would be undesirable to fix the annual grant in perpetuity on the basis of conditions that are transitory, or to fail to provide for serious emergencies, special provisions should be made. The Commission recommends the establishment of a small permanent commission (which may be called the Finance Commission), assisted by an adequate technical staff, to advise upon all requests for new or increased grants and to re-appraise the system of grants every five years. The Commission believes that these provisions will permit of the necessary elasticity in the financial relations between the provinces and the Dominion that has been lacking under the subsidy system.

(E) **Municipal Finance.**—The Commission was made fully aware of the seriousness of the problem of municipal finance and of the burdens hitherto placed upon real estate throughout Canada. The position, however, is peculiar inasmuch as municipalities are definitely the creatures of the provinces in which they are situated, and their financial powers are such as the provinces choose to confer on them. The Commission has not felt it to be within its province to make specific recommendations in regard to the various municipalities, but the financial plan that has been described has taken municipal expenditures and taxation into account as part of the provincial picture and the recommendations made in connection with the provinces will, it is felt, have very important indirect effects on municipal finance. They will relieve the municipalities of their share in providing relief for unemployed and their dependants, and will put every Provincial Government in a better position to extend such aid as it thinks fit to its municipalities, either by relieving them of the costs of services they now perform or by financial contributions to such costs. In each province the way would be cleared for dealing (if the province so desired) with municipal debts generally in the same way that is recommended for provincial debts. This would facilitate much needed reforms, particularly in the great metropolitan areas. It is emphasized, however, that the future of the municipalities lies in the hands of the provinces.

#### **Other Matters Considered by the Commissioners.**

Certain considerations not so closely related to the main financial questions but very important to the well-being of the nation are also dealt with in the Report of the Commission. These are:

(A) **Marketing Legislation.**—It has been pointed out that in the past great difficulty has been experienced in framing Dominion and provincial legislation, even when the wishes of the Dominion and the provinces were identical. The Commission recommends that the Dominion and the provinces should have concurrent legislative powers to deal with the marketing of a named list of natural products, to which additions may be made from time to time by common consent.

The principle of such delegation of power should form part of provincial and Dominion relations, and it is recommended that this should be quite general and that the Dominion should be able to delegate any of its legislative powers to the provinces and that the provinces should also be able to delegate any of their legislative powers to the Dominion. This would provide a convenient means of dealing with specific questions as they may arise without placing any limitation on the power of either the Dominion or the provinces.

(B) **The Transportation Problem.**—This is recognized as a problem that cannot be solved without close collaboration between the Dominion and the provinces. The Commission confines itself to discussing the issues that will have to be faced before the problem of jurisdiction is clarified. Great advantage might be derived from a Transport Planning Commission, which would be concerned with planning transportation developments in a broad way and with facilitating co-operation between the Dominion and the provinces.

(C) **Machinery to Facilitate Closer Co-operation between the Dominion and the Provinces.**—While new governmental machinery should be kept at a minimum, it is considered that special provision should be made to facilitate co-operation between the Dominion and the provinces. In the early days, when the

functions of government were relatively few and administrative organization relatively simple, it may have been possible for Dominion and Provincial Governments to operate independently of each other. But, with the great expansion of governmental functions and the growing complexity of administration, it is no longer possible to do this without serious loss of efficiency and economy. Co-operation between the autonomous governments of the Federal system is to-day imperative, and to facilitate this the Commission recommends that Dominion-Provincial Conferences, which have hitherto met at infrequent intervals, should be regularized and provision made for frequent meetings, say once a year. It urges further that the Conferences should be provided with an adequate and permanent secretariat for the purpose of serving the Conference directly and to facilitate co-operation between the Dominion and the provinces in general.

**(D) The Civil Service and the Re-Allocation of Functions.**—If the Report is implemented, there will be many interests that will be affected by substantial re-allocation of the functions of government. Members of Dominion and Provincial Civil Services will have their present positions and future prospects jeopardized unless suitable action is taken to safeguard them. The Commission feels that every effort should be made to find suitable positions for efficient servants of the State who may be deprived of their present employment by the changes recommended. In most cases the same or similar functions that have been performed will be continued by one or other unit of government and the policy outlined, by protecting the legitimate interests of efficient Civil Servants, will act in the interest of government by retaining the services of able and experienced men and women. This recommendation is particularly important when questions of language are involved, and the Commission states that the performance of functions of the Dominion Government in Quebec should always be in the hands of officials with knowledge both of the French language and of local conditions and customs in the Province.

**(F) Education.**—The Royal Commission on Dominion-Provincial Relations recommended that the field of education should be left with the provinces as defined under the British North America Act. The Commission pointed out that the fiscal needs of all provinces under the recommendations made had been framed to include within those needs provision for the education of the young and the placing of every province in a position to discharge its responsibilities for education on a suitable scale within the means of the people of Canada as it chose to do so. It is stated in the Report that a generous provision for the education of the children of the nation should not depend on "any arbitrary constitutional provision alone but on the persistent conviction of the mass of the people that they must be ready to deny themselves some of the good things of life in order to deal fairly by their children". On these grounds it was not felt to be wise or appropriate for the Dominion to make grants to the provinces specifically ear-marked for the purposes of general education.

Grants to universities, made contingent on the maintenance over a period of years of provincial grants to the same institutions and on the preservation of certain high academic standards, were favoured. Small Dominion annual grants divided among the provinces in rough proportion to their populations might, it is thought, play a peculiarly useful part in the national life. Such funds should preferably be spent at the discretion of the universities to provide scholarships and bursaries, which would bring opportunity within the reach of poor but able students. The Commission commends the educational work that the Dominion Government has

done through the co-operation of the National Research Council and the Canadian universities in the organization of scientific research in the physical sciences.

(G) **Social Services.**—Under this heading, the Royal Commission recommends that research work analogous to what is being done by the Dominion Bureau of Statistics in the economic field might be organized through a Social Science Research Council that would co-ordinate and in some degree direct the research work in these sciences now being done in Canadian universities and elsewhere. It is pointed out that there is a real need for some such institution and it could serve a most useful purpose in analysing the social problems with which current legislation is designed to deal.

It is also recommended that, with the exception of unemployment relief, existing social services remain with the provinces, but if contributory old age pensions should be introduced they should, for various reasons, be on a Dominion-wide scale and under the control of the Dominion Government. To avoid rigidity in the matter of jurisdiction, it would seem desirable to provide for concurrent jurisdiction between the Dominion and the Provinces in other forms of social insurance.

### Conclusion.

The aim of the Commission has been to adjust the Dominion-Provincial relations in terms of the economic life of 1939 along much the same lines as the British North America Act established them in terms of the economic life of 1867.

The Dominion assumed the provincial debts in 1867 as the Commission recommends it to do to-day. In 1867 the Dominion was expected to exercise the chief taxing powers of that time (customs and excise), and under the Commission's proposals it is expected to exercise other chief taxing powers of to-day, such as the tax on personal incomes, corporation taxes, and succession duties. The Dominion was to pay subsidies in 1867 to enable the provinces to perform functions entrusted to them without having to resort to oppressive taxation. Under the Commission's proposals, the Dominion would pay National Adjustment Grants for precisely the same purpose. The different measure of the amount to be paid contained under the recommendation is more apparent than real for it arises from the inequalities of wealth that have developed as between provinces. While equal per capita subsidies did conform in some rough approximation with the fiscal needs of 1867, they do so no longer. The methods employed for calculating the appropriate adjustment grants are aimed at accomplishing what the per capita formula was intended to achieve in 1867, the aim being the maintenance of Provincial Governments that can provide the necessary Canadian standard of service for the people.

## APPENDIX VI.

## Balance Sheet and Revenue and Expenditure Statistics of All Governments.

In Part A of Book III—Documentation—of the Report of the Royal Commission on Dominion-Provincial Relations, a comprehensive study of the comparative statistics of all Governments in Canada—Dominion, Provincial, and municipal—has been made. Certain summary tables showing the combined balance sheets for the years 1913, 1921, 1926, 1930, and 1937, and the combined revenue and expenditure statements for the same years are reproduced below and will supplement the information given in the introduction to the Public Finance chapter, pp. 826-842.

**1.—Combined Balance Sheet of All Governments, for Their Respective Fiscal Years Ended Nearest to Dec. 31, 1913, 1921, 1926, 1930, and 1937.**

NOTE.—Dashes in this table indicate that the corresponding stub items did not apply in those years.
